# SIRIUS: 59% Reduction in TVF

FDA Circulatory Devices Advisory Panel October 2001

# DRUG ELUTING STENTS: *More, Bigger Lumens*

Lack of re-endothelialization  
at sites of thrombosis in DES

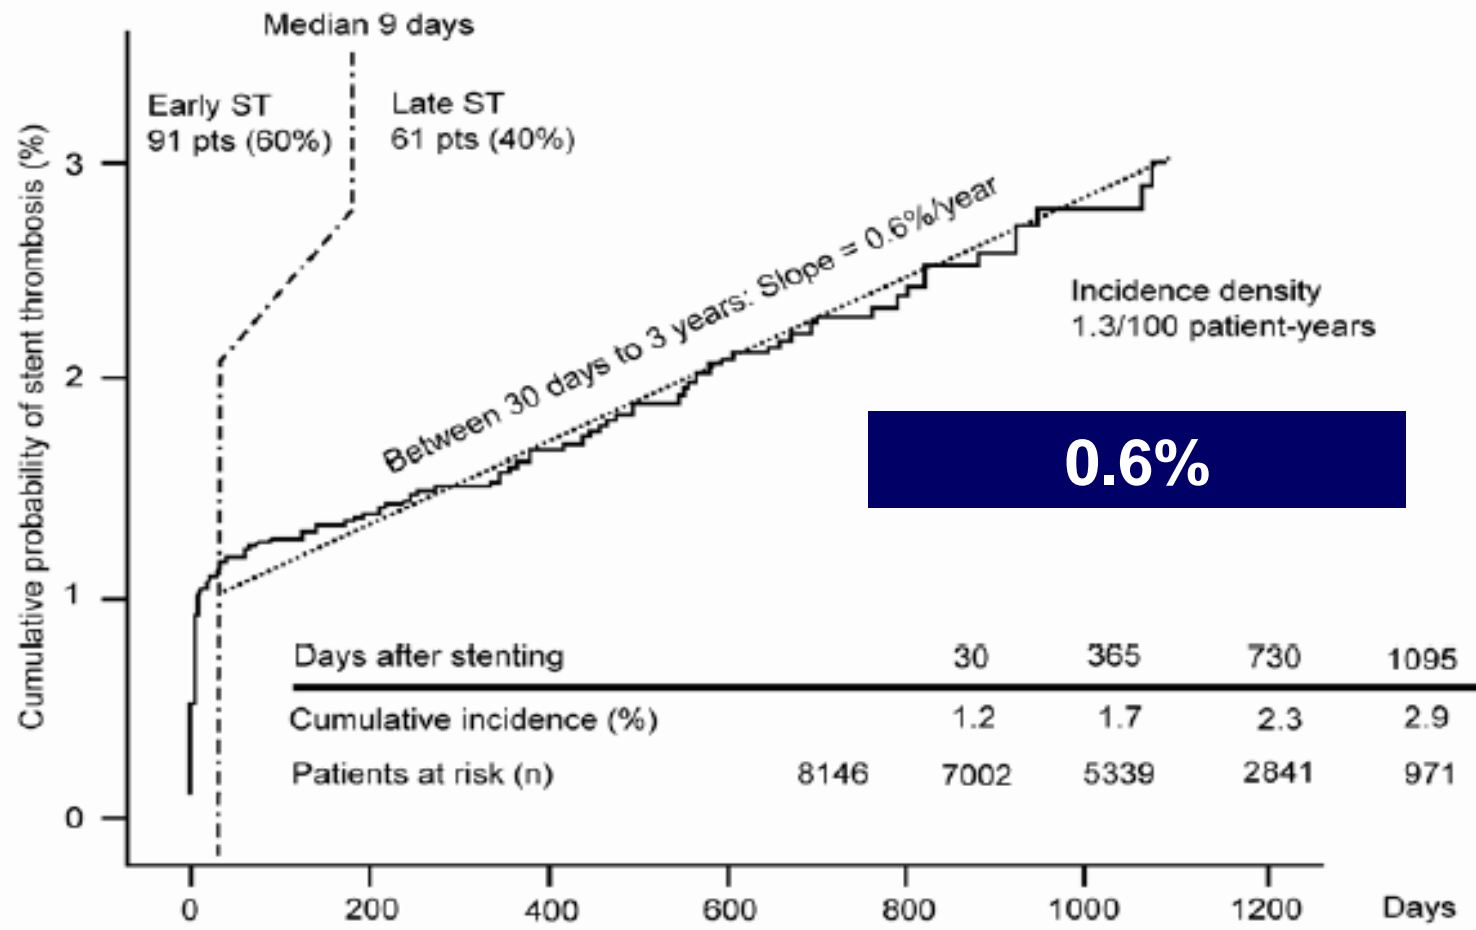

**“A medical device is the replacement of one disease with another, hopefully a less severe one....”**

*William C. Roberts, MD ca. 1977*

Renu Virmani CV Path

DES = drug eluting stent; N = number; pts = patients; ST = stent thrombosis. Adapted from (67)

Popma et al, FDA Advisory Panel Summary

# **DRUG ELUTING STENTS:** ***Are Big Lumens Bad?***

## **Second Generation DES:**

- ✦ **Combination Products: *Platform, Polymer, Drug***
- ✦ **Addressing healing/safety as well as restenosis**

## **Drug-Eluting Stents “Deliver Heartburn” How Do We Spell Relief Going Forward?**

Mitchell W. Krucoff, MD; Ashley Boam, MSBE; Daniel G. Schultz, MD

“Breakthrough” technologies may produce rare or unexpected performance issues in postmarket use, especially when rapid market penetration into large patient populations outpaces the development of clinical knowledge. Although high-profile meetings or news media coverage may help draw attention to such issues, ultimately, it is careful scientific

organizations, and academics are to be applauded for collaborative efforts to continue to collect and provide unbiased access to new and extended patient-level data, and several leading peer-reviewed journals have expedited publication to facilitate dissemination of these findings. For example, 7 articles on DES outcomes were included in the March 8

Krucoff et al, *Circulation*. 2007.

# Endeavor: DES System Components

Driver® Cobalt Alloy Stent

Stent Delivery System

PC Technology

Drug: Zotarolimus

# Endeavor: Driver Platform

- **Atraumatic delivery**
  - Edgeless design
  - Thin struts, 0.0036 in.
- **Strength and visibility**
  - Cobalt alloy
  - Open-cell design
- **Vessel conformability**
  - 1-mm elements
  - Modular design

# Endeavor: PC Technology Polymer

- The PC Technology polymer mimics the outside surface of a red blood cell

The Phosphorylcholine (PC) headgroup

- The PC Technology polymer has a high water affinity (hydrophilic)
- Water acts as a permanent barrier to protein adhesion

Hayward JA et al., *Biomaterials*. 1984;5:135–142.

# Endeavor: Zotarolimus Antiproliferative Drug

**Non-cytotoxic**  
Blocks entry into S phase

**Highly potent**  
Effective antiproliferative  
limus analog

**Highly lipophilic**  
Enables rapid arterial tissue loading  
and drug retention

# Endeavor Preclinical: 21 Day Endothelialization

Cypher

Taxus

Endeavor

Virmani et al., PCR 2006, rabbit model at 21 days.

# ENDEAVOR Clinical Program

	1 year	2 years	3 years	4 years
ENDEAVOR I n = 100	Single-arm, first-in-man			
ENDEAVOR II n = 598/D = 599	1:1 RCT vs. Driver			
ENDEAVOR II CA n = 296	Open-label registry			
ENDEAVOR III n = 323/C = 113	3:1 RCT vs. Cypher			
ENDEAVOR IV n = 774/T = 775	1:1 RCT vs. Taxus			
ENDEAVOR Japan n = 99	Single-arm trial			

**2154** patients followed to 12 months

**1287** patients followed to 2 years

**675** patients followed to 3 years

# ENDEAVOR Clinical Program

	ENDEAVOR II	ENDEAVOR III	ENDEAVOR IV
Control	Driver BMS	Cypher	Taxus
N	E = 598 D = 599	E = 323 C = 113	E = 774 T = 775
Primary Endpoint	TVF (cardiac death, MI, TVR) at 9 months	In-segment late lumen loss by QCA at 8 months	TVF at 9 months
QCA, IVUS Subset	QCA = 600 (44.7%); IVUS = 300	QCA, IVUS = All	QCA, IVUS = 328 (21.2%)
DAPT	≥ 3 months	≥ 3 months	≥ 6 months <sup>1</sup>
Inclusion criteria	Single De Novo Native Coronary Artery Lesions Pre-dilatation required		
	Diameters: 2.25–3.5 mm Lesion Length: 14–27 mm	Stent Diameters: 2.5–3.5 mm Lesion Length: 14–27 mm	
Key Exclusion Criteria	Left ventricular ejection fraction <30%. Acute MI within 72 hours. Creatinine >2.0 mg/dl. Left main, ostial lesion, or bifurcation lesion		

<sup>1</sup> ≥6 month DAPT regimen in EIV due to 1:1 randomization vs. Taxus.

ENDEAVOR II: Fajadet, et al., *Circulation*. 2006;114:798–806. ENDEAVOR III: Leon, M., ACC 2007. ENDEAVOR IV: Leon, TCCT 2007 (trial analysis done using revised 9-month data set).

# 11 RCTs with Cypher, Taxus, Endeavor, and BMS (5381 pts)

## Surrogate Angiographic Endpoints for Clinical Outcomes

### LL vs. TLR - A monotonic but curvilinear relationship

N 256 273 447 570 581 586 498 413 434 331 486 440

Pocock et al., JACC, Vol. 51, No. 1, 2008

# Endeavor: "Complete" NIH

Smooth Lumen, Even Neointimal Distribution

# ENDEAVOR Clinical Program Overview

Study	Comparator	Angio	Clinical	Safety
E-II	BMS	+++	++	=
E-III	DES	---	=	??
E-IV	DES	---	=	??

***Are smaller lumens safer DES vs. DES?***

# Endeavor 2008: Conclusions

- ***Second Generation Design:***
  - Cobalt chromium platform
  - Biocompatible polymer
  - New molecular entity
- ***Consistent results:***
  - Highly deliverable
  - High rate of procedural success
  - Late loss > 0.6 mm

# Endeavor 2008: Conclusions

## ■ **vs. BMS:**

- Superior efficacy
- Equivalent safety

## ■ **vs. CYPHER:**

- Not non-inferior late loss
- Safety: ??

## ■ **vs. TAXUS:**

- Non-inferior TVF
- Safety: ??

# **Circulatory Devices Advisory Panel Vote: *10-0 Approval w/Conditions***

**Medtronic Receives FDA Approval for Endeavor®  
Zotarolimus-Eluting Coronary Stent System**

**New Drug-Coated Stent Offers Excellent Combination  
of Safety, Effectiveness and Deliverability**

**MINNEAPOLIS – Feb. 1, 2008 –Marking a major development in the field of interventional cardiology, Medtronic, Inc. (NYSE: MDT), announced today that it has received approval from the U.S. Food and Drug Administration (FDA) for the Endeavor® Zotarolimus-Eluting Coronary Stent System to be used in the treatment of coronary artery disease, which affects an estimated 13 million people in the United States and is the country's leading cause of death.**
