

IVUS & Tissue characterization Real World Experience

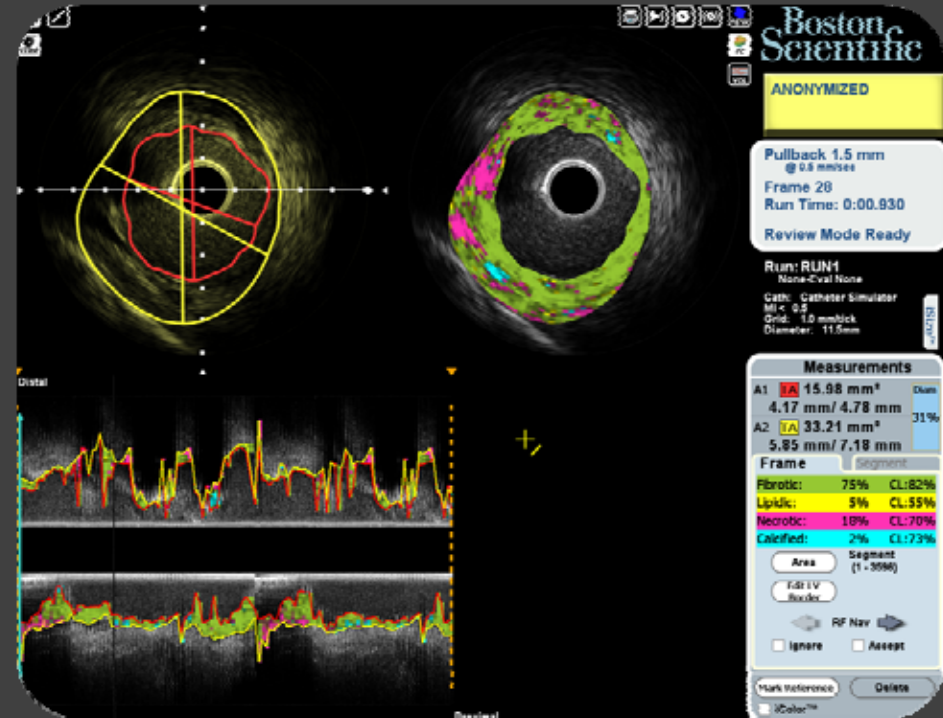

Lee Sung Yun
Inje University ilsan Paik Hospital

The iMap™ Feature Overview “40MHz Tissue Characterization”

iMap™ Feature Workflow

1. Characterization of plaque composition between the lumen and media
2. Confidence label assessment
3. Uninterruption of black and white work flow
4. Provides volume, area and percentage measurements
5. Ability to select areas of interest in the cross sectional and longview for detailed analysis.
6. Automated Trace Assist

How to get iMAP

Easy to get with touch-screen button

Measurements

A1	TA	6.04 mm ²	Area
		2.59 mm / 3.00 mm	28%
A2	TA	8.33 mm ²	
		3.13 mm / 3.35 mm	

Frame Segment

Fibrotic:	82%	CL:86%
Lipidic:	8%	CL:59%
Necrotic:	9%	CL:59%
Calcified:	1%	CL:76%

Area Segment (1 - 3546)

ISize™

Proximal

Satisfy with Very Similar Frame , not exact !

After iMAP acquisition, then analysis

1. Save “Screen shot” and “Data export” to CD/DVD/Removable hard disk
2. Do not erase data on hard disk before Data export
3. Use option when archiving into DVD to off-line iMAP analysis
4. Off line analysis

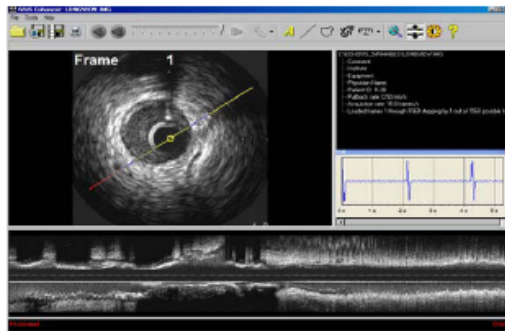

IVUS Enhancer™

DICOM, echoPlaque, and iLab File Review and Analysis

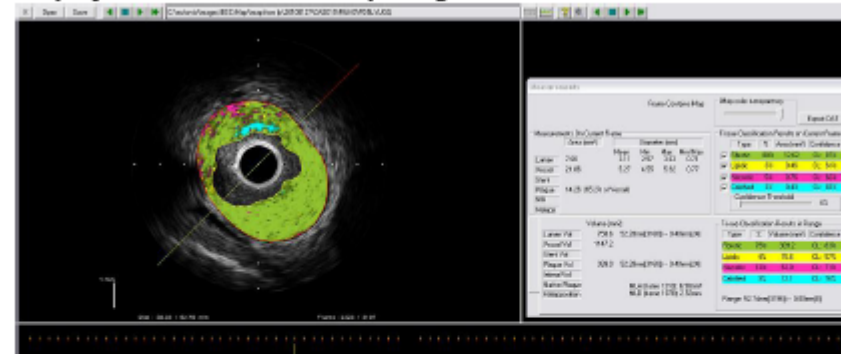

IVUS Enhancer™, the newest component of the IVUS Plus and Foundation families, offer easy-to-use visualization capabilities, full length, real time longitudinal display with full rotational capability, two dimensional quantification, flexible over any portion of the acquired pullback, and animation saving capabilities. Moreover, Enhancer is designed to be able to run on laptops, so now IVUS analysis can travel with you wherever you go.

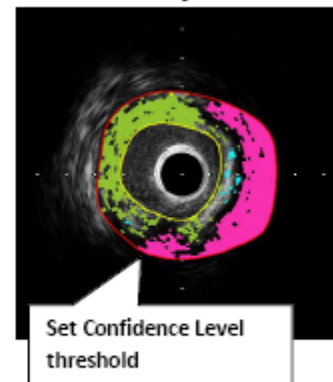

Review and Analysis of iMap™ Data Using INDEC's echoPlaque Software

Display Boston Scientific iMap images, contours, and measurement results:

Additional features to improve and enhance analysis:

Frame-by-frame and region results are shown in echoPlaque. In-depth results can be exported to Excel-compatible DAT spreadsheet files:

Qivus[®]

Everything You Need to Assess Intravascular Images

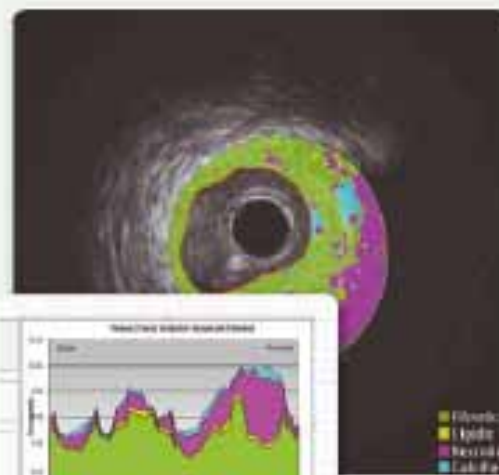

IVUS and OCT image data sets present a wealth of information. Getting the most out of that information in a fast, efficient way—that is what Qivus[®] helps you achieve.

Fast quantification, plaque visualization and tissue characterization give you all the facts and insights you need. What's more, you get them in a time frame of minutes, so that you can direct your attention to what really matters: treating your patients.

Qivus—everything you need to assess intravascular images.

Now with support for tissue characterization and OCT

Parameter	Value	Unit
Area	1.2	mm ²
Perimeter	1.5	mm
Volume	0.8	mm ³
Mean	1.0	mm
Max	1.5	mm
Min	0.5	mm
Stdev	0.2	mm
Skewness	0.1	mm
Kurtosis	0.0	mm
Entropy	0.5	mm
Contrast	0.2	mm
Texture	0.1	mm
Correlation	0.0	mm
Autocorrelation	0.0	mm
Cross-correlation	0.0	mm
Phase	0.0	mm
Amplitude	0.0	mm
Intensity	0.0	mm
Phase Shift	0.0	mm
Amplitude Shift	0.0	mm
Intensity Shift	0.0	mm
Phase Error	0.0	mm
Amplitude Error	0.0	mm
Intensity Error	0.0	mm

Qivus Benefits

- Drastically reduces analysis time with its semi-automatic analysis and fast editing
- Gets more out of images already available

Qivus Features

IVUS

- Support for all data formats
- Time-saving automatic detection of lumen, stent and vessel border
- Powerful, intuitive and fast editing
- Single-slice contour detection and semi-automatic 3D contour detection

Qivus is a registered trademark of Medis medical imaging systems b.v. in the United States and in other countries. Qivus[®] is based on image processing algorithms developed at the Division of Image Processing, Department of Radiology, Leiden University Medical Center.

The tissue characterization and optical coherence tomography (OCT) modules of Qivus have not received US FDA 510(k) market clearance and are not available for sale in the United States. If you are interested in these modules for scientific research purposes only, please contact us-sales@medis.nl.

40 MHz BSC iMap™	20 MHz Volcano VH™
Greyscale + Color	Color Only
Uses 13 Data Points	Uses 8 Data Points
Classifies through Spectrum Similarity	Classifies through Elimination
Includes Confidence labels	No Confidence labels
Volumetric Mode Included	No Volumetric Mode
Not ECG-gated. Instead, 2 frames/mm are captured	EKG-gated
 Fibrotic  Necrotic core  Fibrofatty  Calcium	 Fibrotic  Necrotic core  Lipid pool  Calcified

Calcified Plaques

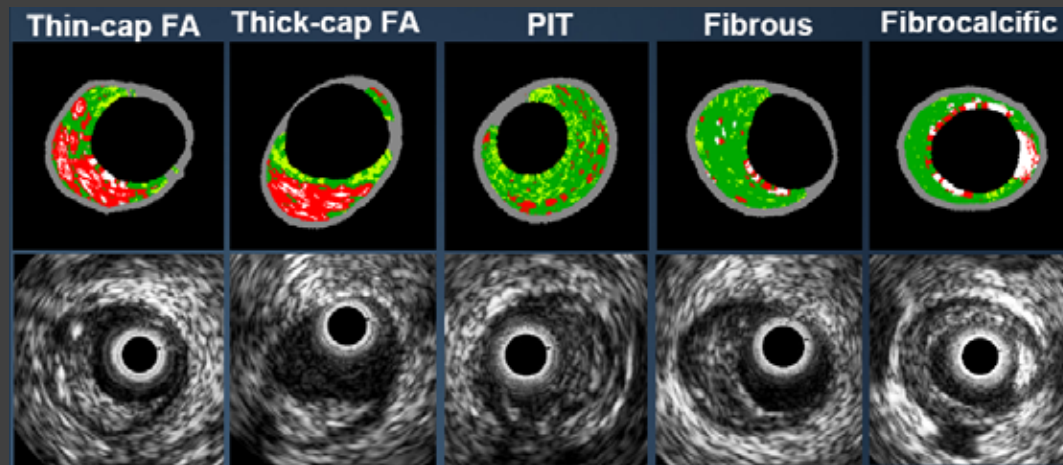

Attenuated plaque in LMCA

- iMAP-IVUS
 - Interpreted as less calcium and necrotic area
 - Nearly all shadow as necrotic core with high confidence level
 - Calcium / Wire artifact / Attenuated plaque
 - Did not showed peri-stent metal necrotic core
 - Could analyze specific regions of interest
 - Automatic iMAP capture with 2 frames/mm
- VH – IVUS
 - Also wire artifact as necrotic core in parallel wire
 - Peri-stent metal necrotic core
 - Plaque behind calcium ?

Personal opinions

- iMAP-IVUS needs more
 - Software upgrade for Area beyond all kinds of shadows
 - Systemized analysis tools (low cost)
 - Nationwide iMAP database and study group
 - ISR study for neo-intima
 - Need iMAP definition ?
 - Thin cap fibroatheroma
 - 5 types of Lesion
