

# Near Infrared Spectroscopy Imaging in the Cath Lab When & Why

*Joon Won Kang, RT*

Cardiovascular Center, Anam Hospital

Korea University Medical Center

**Angiography Alone is Not Enough**

**Is only physiology enough ???**

***Role of NIR Spectroscopy-IVUS***

***Improving PCI Outcomes !!***

***Preventing Late Events !!***

# **NIRS-IVUS: Multi-Modality Imaging**

## **NIRS: Lipid-Core Plaque**

**Length of Vessel to Stent**

**Distal Embolization Risk**

**Plaque Vulnerability**

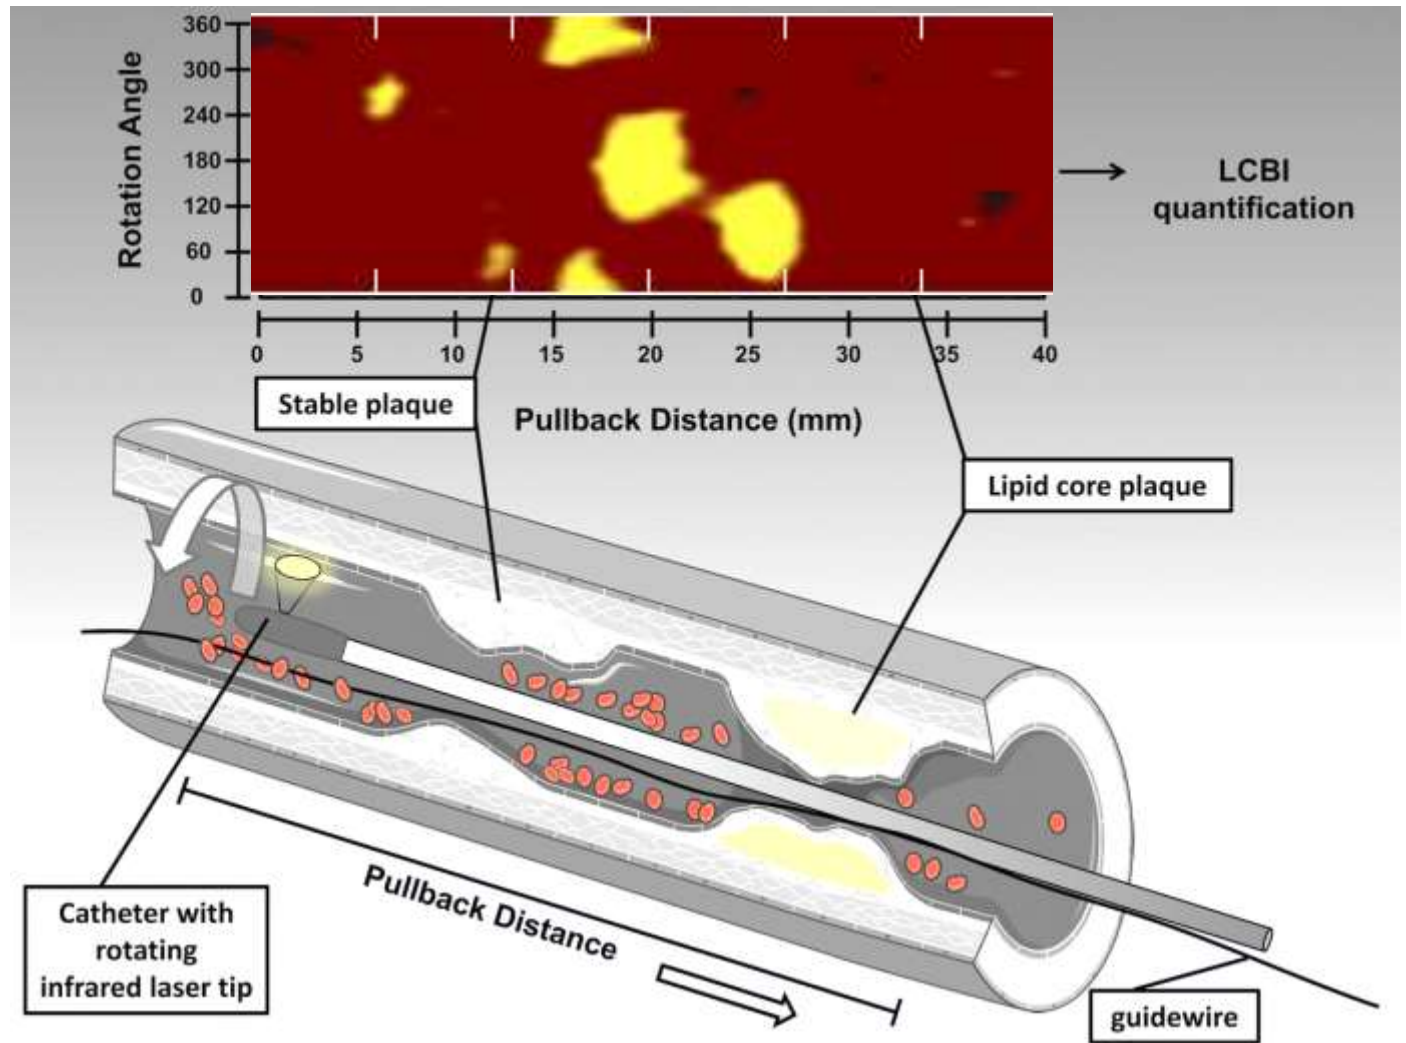

## **IVUS: Plaque Architecture**

**MLA, Length of Vessel to Stent**

**Optimal Stent Expansion**

**Stent Edge Complications**

# NIRS catheter with a rotating infrared laser tip and resulting NIRS chemogram

# Infraredx Launches Advanced TVC Imaging System, Muller NIRS-IVUS Catheter at ACC 2015

**InfraReDx**  
50MHz IVUS Human  
Coronary Artery

Grey Scale IVUS

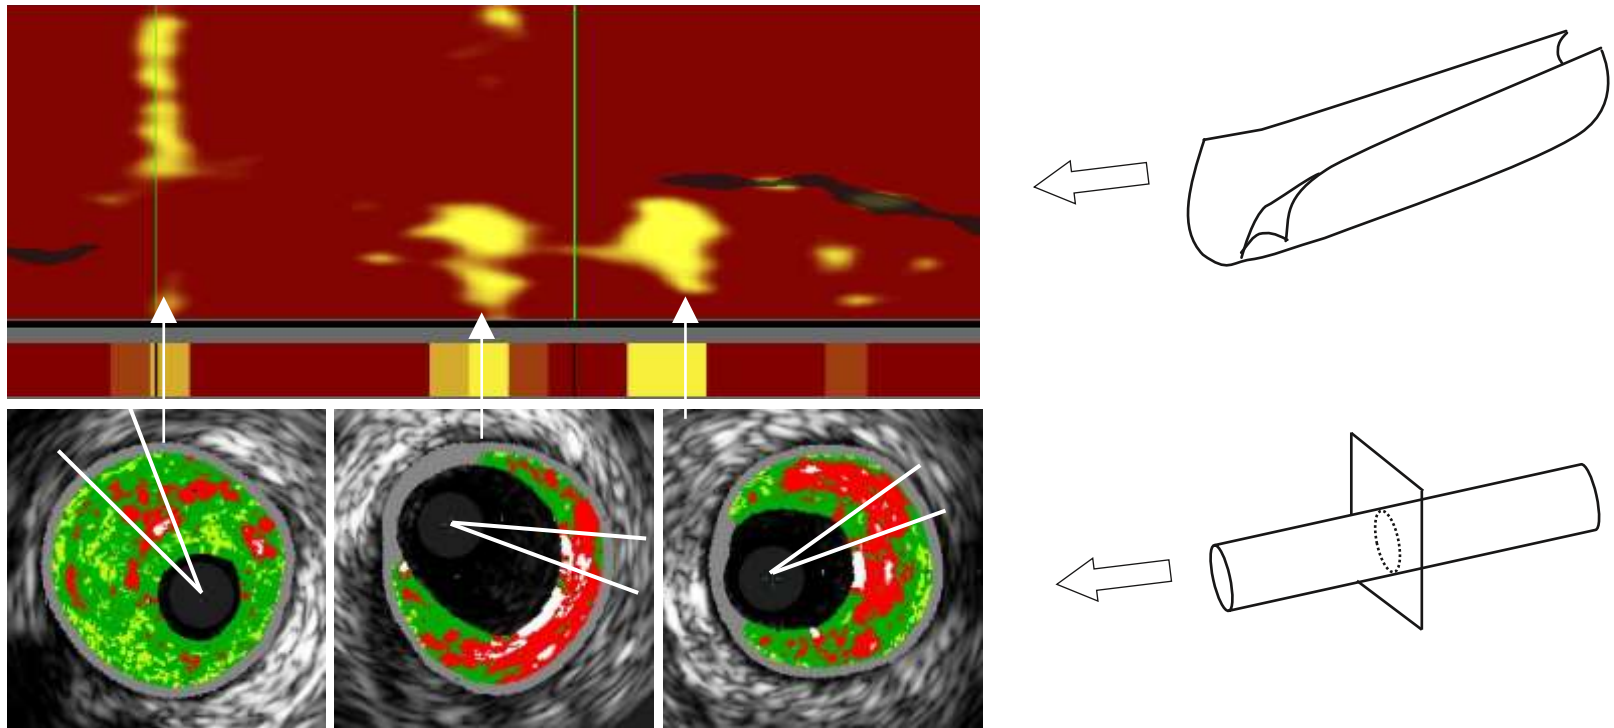

VH-IVUS

# Limitations of VH-IVUS for Detection of Vulnerable Plaque

- **Plaque contours must be drawn accurately**
  - No automated edge detection software
- **Pattern recognition of VH-TCFA is not always straight-forward**
  - Definition of VH-TCFA has evolved, and is still not certain even for the “experts”
  - Resolution of IVUS ~150-200 um
- **Necrotic core (red) and calcium (white) signals overlap**

# Comparison between VH and NIRS

Existence

Distribution of NC

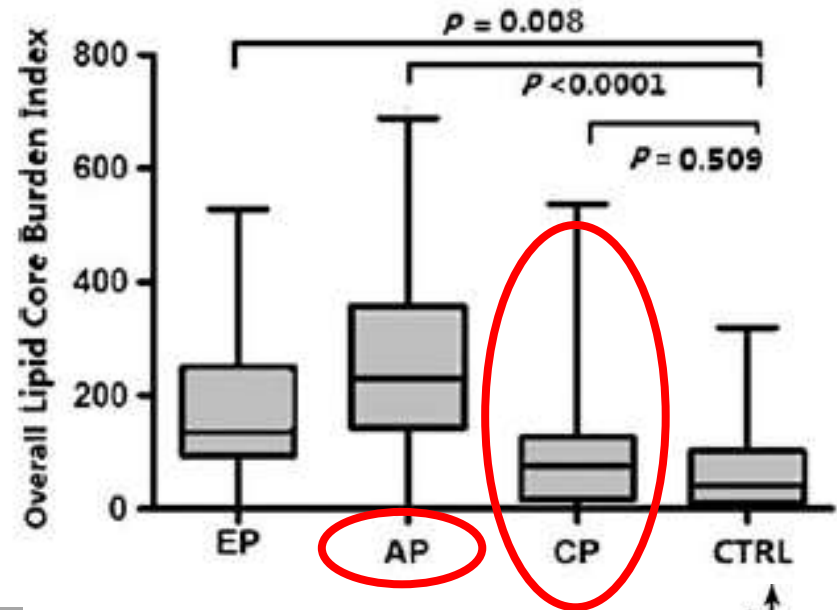

Depth

Fibrous cap thickness

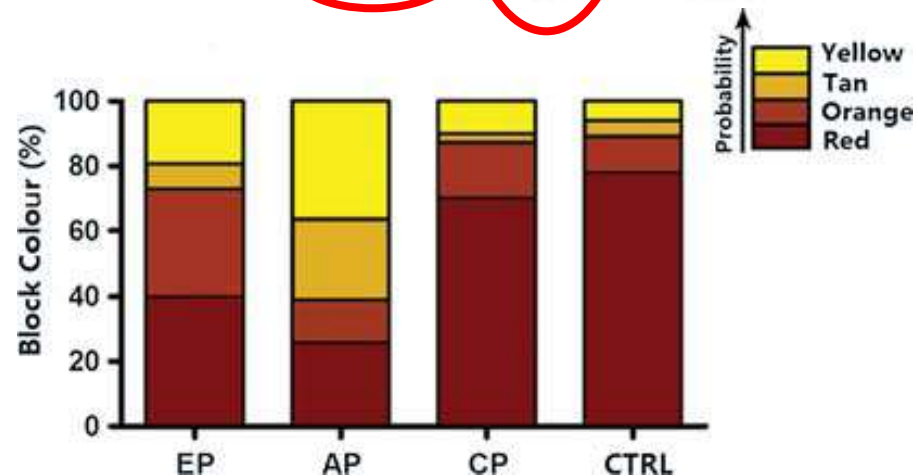

# Comparison between VH-%NC and NIRS-LCBI

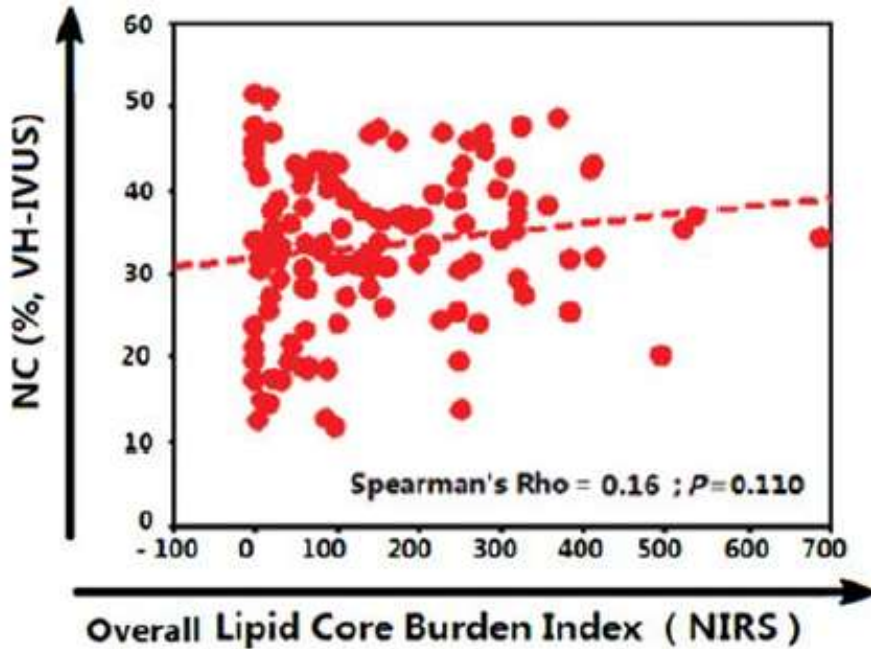

Echolucent      Attenuated      Calcified

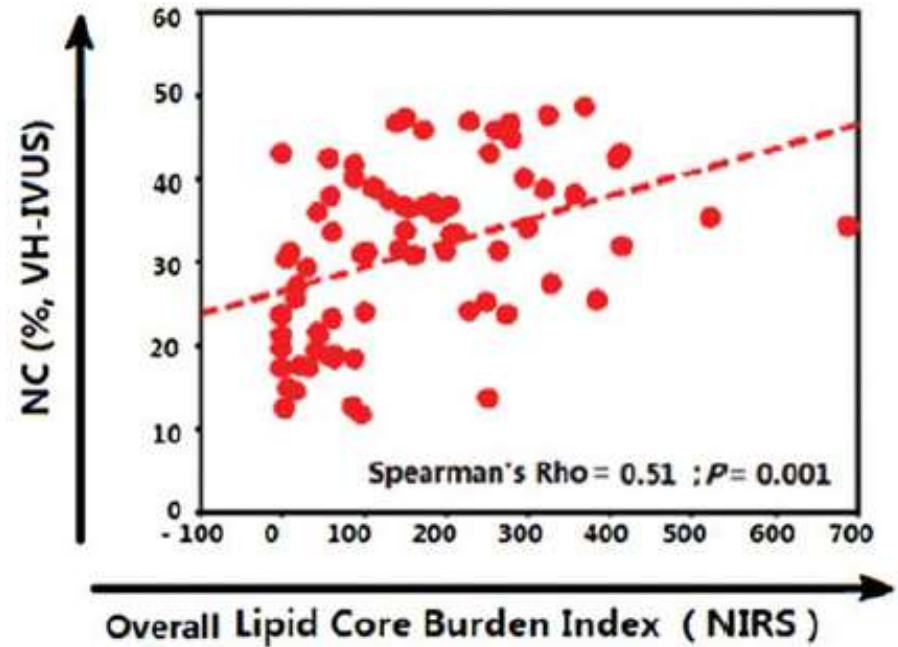

# Correlation between VH-%NC and LCBI-NIRS

## Overall Plaques

**No correlation**

## Non-Calcified plaque

**Correlation**

# Different type of Calcified Plaque

## **NIRS: Lipid-Core Plaque**

**Length of Vessel to Stent**

**Distal Embolization Risk**

**Plaque Vulnerability**

## **IVUS: Plaque Architecture**

**MLA, Length of Vessel to Stent**

**Optimal Stent Expansion**

**Stent Edge Complications**

# Length of Vessel to Stent

Does Implanting Stent Edge in LCP  
Impact Outcomes?

# LCP extends into RVD of Vessel

20% of Lesions Not Fully Covered

**A**= LCP only within lesion defined by angiography

**B**= LCP extends  $\leq 5\text{mm}$  beyond the lesion margins

**C**= LCP extends  $>5\text{mm}$  beyond the lesion margins

# Acute Stent thrombosis: Necrotic core prolapse

59 pts  
58% stent  
thrombosis

**Necrotic Core  
Prolapse**  
28% vs 11%  
P<0.001

## **NIRS: Lipid-Core Plaque**

Length of Vessel to Stent

**Distal Embolization Risk**

Plaque Vulnerability

## **IVUS: Plaque Architecture**

MLA, Length of Vessel to Stent

Optimal Stent Expansion

Stent Edge Complications

# Peri-Procedural MI

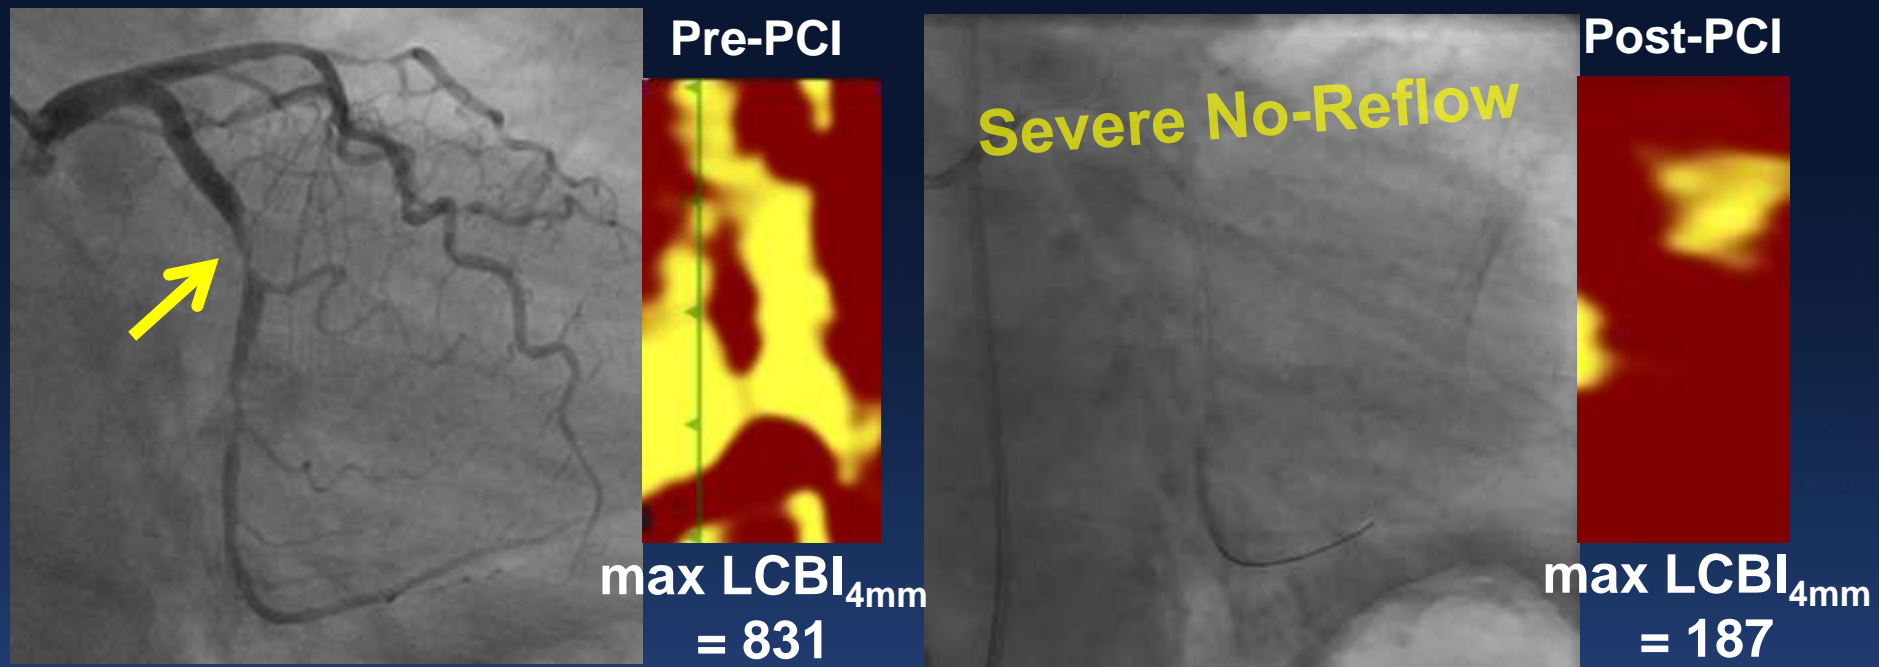

Complicates 12-15% of PCI's

Distal Embolization Lipid common mech

Assoc with Increased Mortality over time

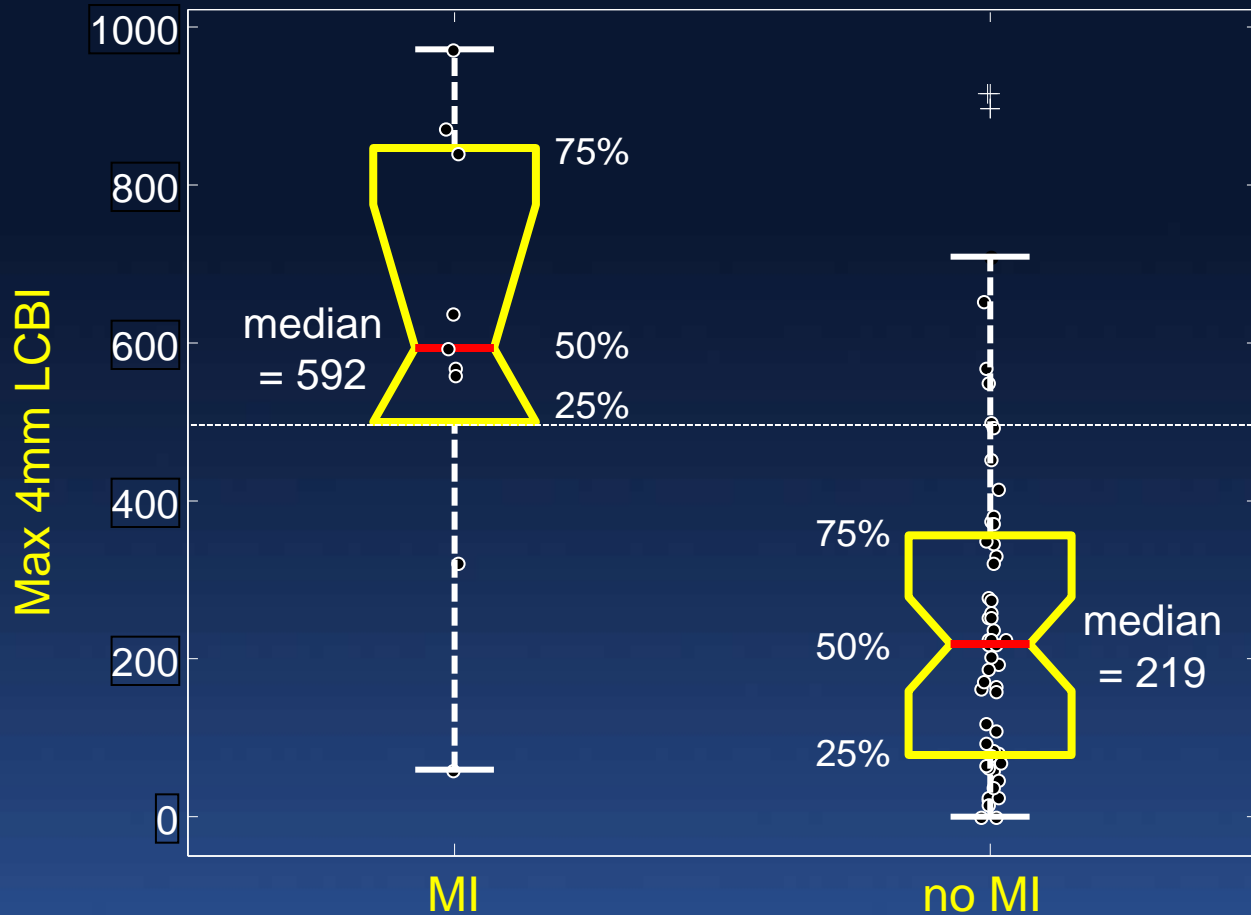

# Predictors of MI and No-reflow after PCI

**Lesions with Large LCBI at Risk for Distal Embolization**

# Association of NIRS-Detected LCP with Peri-Procedural MI (MB or trop >3x NL)

**$MaxLCBI_{4mm} > 500$  Predicts 50% risk Peri-procedure MI**

## **NIRS: Lipid-Core Plaque**

Length of Vessel to Stent

Distal Embolization Risk

**Plaque Vulnerability**

## **IVUS: Plaque Architecture**

MLA, Length of Vessel to Stent

Optimal Stent Expansion

Stent Edge Complications

# FFR is helpful to find significant lesions

Recommendations	Class <sup>a</sup>	Level <sup>b</sup>	Ref. <sup>c</sup>
FFR to identify haemodynamically relevant coronary lesion(s) in <u>stable patients</u> when evidence of ischaemia is not available.	I	A	50,51,713
FFR-guided PCI in patients with multivessel disease.	IIa	B	54

ESC Guideline for FFR

However, the evidence for FFR comes mainly from patients with stable angina

Late MACE: Natural history of CAD progression cannot be detected with FFR

# 48y Male, Sudden Coronary Death

Image is courtesy of Dr. James Muller

CAD - 7.4 million coronary deaths per year

CAD - 1.0 million heart attacks occur each year

**Lipid Core Plaque**

Lipid Core

Lumen

**Ruptured Lipid Core Plaque**

Lipid Core

Lumen

Rupture

# STEMI culprit vs Non-culprit segments

Mann-Whitney U test, Median  $\pm$  interquartile range

maxLCBI >400:  
Sensitivity = 82 %  
Specificity = 93 %

maxLCBI >400 identifies STEMI  
plaque with high specificity

# NIRS Clinical Trials

Drug Evaluation: **YELLOW trial**

Prevention of Coronary  
Events due to  
Vulnerable Plaque **PROSPECT 2  
ABSORB**

Prediction of Coronary  
Events Caused by  
Vulnerable Plaque **LRP  
PROSPECT 2  
ORACLE-NIRS**

Determination of length  
of artery to stent

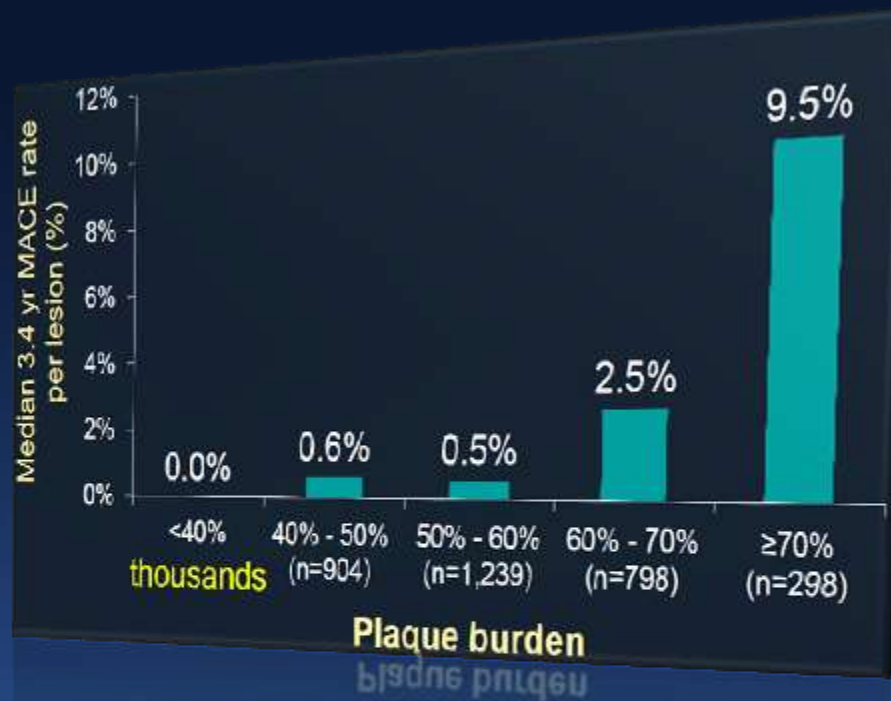

**COLOR registry, CANARY Study**

Prediction of  
peri-stenting MI (Distal Embolization)

Detection of  
LCP & LCP **CDEV, SPECTACL**  
Burden Index

Madder RD et al. JACC Cardiovascular Interv 2013;6:838-46  
Madder RD et al. Circ Cardiovasc Interv 2012;5:55-61  
Goldstein JA et al. Circ Cardiovasc Interv. 2011;4:429-437  
Sakhuja R et al. Circulation 2010;122:2349-2350  
Kini A et al. JACC 2013; 62: 21-9

# PROSPECT : Correlates of Non-culprit Lesion Related Events: Impact of plaque burden

<u>Variable</u>	<u>HR [95% CI]</u>	<u>P value</u>
PB <sub>MLA</sub> ≥70%	5.03 [2.51, 10.11]	<0.0001
VH-TCFA	3.35 [1.77, 6.36]	0.0002
MLA ≤4.0 mm <sup>2</sup>	3.21 [1.61, 6.42]	0.001

**PROSPECT** Study showed 1) plaque burden >70%,  
2) MLA <4mm<sup>2</sup>, and 3) TCFA were the lesion  
morphology to predict future event

Should we treat vulnerable plaque in  
physiologically non-significant lesion?

NIRS/IVUS defined vulnerable plaque will be  
evaluated in natural history **PROSPECT2** study

# PROSPECT II Study

900 pts with ACS at up to 20 hospitals  
in Sweden, Denmark and Norway (SCAAR)

NSTEMI or STEMI  $>12^{\circ}$

IVUS + NIRS (blinded) performed in culprit vessel(s)

Successful PCI of all intended lesions (by angio  $\pm$ FFR/iFR)

Formally enrolled

3-vessel imaging post PCI

Culprit artery, followed by non-culprit arteries

Angiography (QCA of entire coronary tree)

IVUS + NIRS (blinded) (prox 6-8 cm of each coronary artery)

# PROSPECT II Study

## PROSPECT ABSORB RCT

900 pts with ACS after successful PCI

3 vessel IVUS + NIRS (blinded)

↓  
≥1 IVUS lesion with ≥70% plaque burden present?

**Yes**

(N=300)

**ABSORB BVS  
+ GDMT** (N~150)

**Guideline Determined  
Medical Therapy**  
(N=150)

**No**

(n=600)

Routine angio/3V IVUS-NIRS FU at 2 years

Clinical FU for ≥3 years

# PROSPECT ABSORB RCT

## - Secondary endpoint -

Safety and efficacy of BVS in lesions with large plaque burden which are LRP+ vs LRP-

- Increasing evidence is accumulating linking LCP to vulnerable plaque, lesions at risk for **embolization** and **stent thrombosis**
- **Prospective studies** are required to validate these observations, followed by therapeutic trials

# Current trend

Significant - PCI

Insignificant - Medical therapy?  
*(Prevention)*

# Future trend

**Treatment ???!!!!**

*Thank you for  
your time!*
