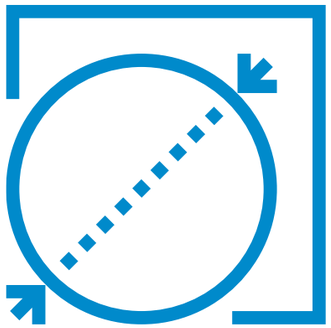
Pusan National University Hospital

EVOLUT PRO+ SYSTEM

The Evolut™ PRO+ System builds on the Evolut platform's hemodynamic advantage by **Expanding Access to More Patients** with the lowest delivery profile for low risk of vascular complications. Additionally, it features the external tissue wrap on all valve sizes for **Advanced Sealing** across the broadest annular range.



LOWEST DELIVERY PROFILE
for access down to 5.0mm vessels with the 23-29 mm valves

ADVANCED SEALING
for all valve sizes with the addition of the external tissue wrap to the 34 mm valve

MEDTRONIC EVOLUT™ PRO+ SYSTEM
INDICATED ANNULUS RANGE

Together, the Evolut PRO+ System treats the **widest annulus range** of any commercially available TAVR system.*

EVOLUT™ LOW RISK TRIAL HEMODYNAMICS TO 2 YEARS[1]

1. Popma JJ, Deeb GM, Yakubov SJ, et al. Transcatheter Aortic-Valve Replacement with a Self-Expanding Valve in Low-Risk Patients. N Engl J Med. May 2, 2019;380(18):1706-1715

PATIENT CONSIDERATIONS VALVE PERFORMANCE

TAVR outperforms at all time points post procedure

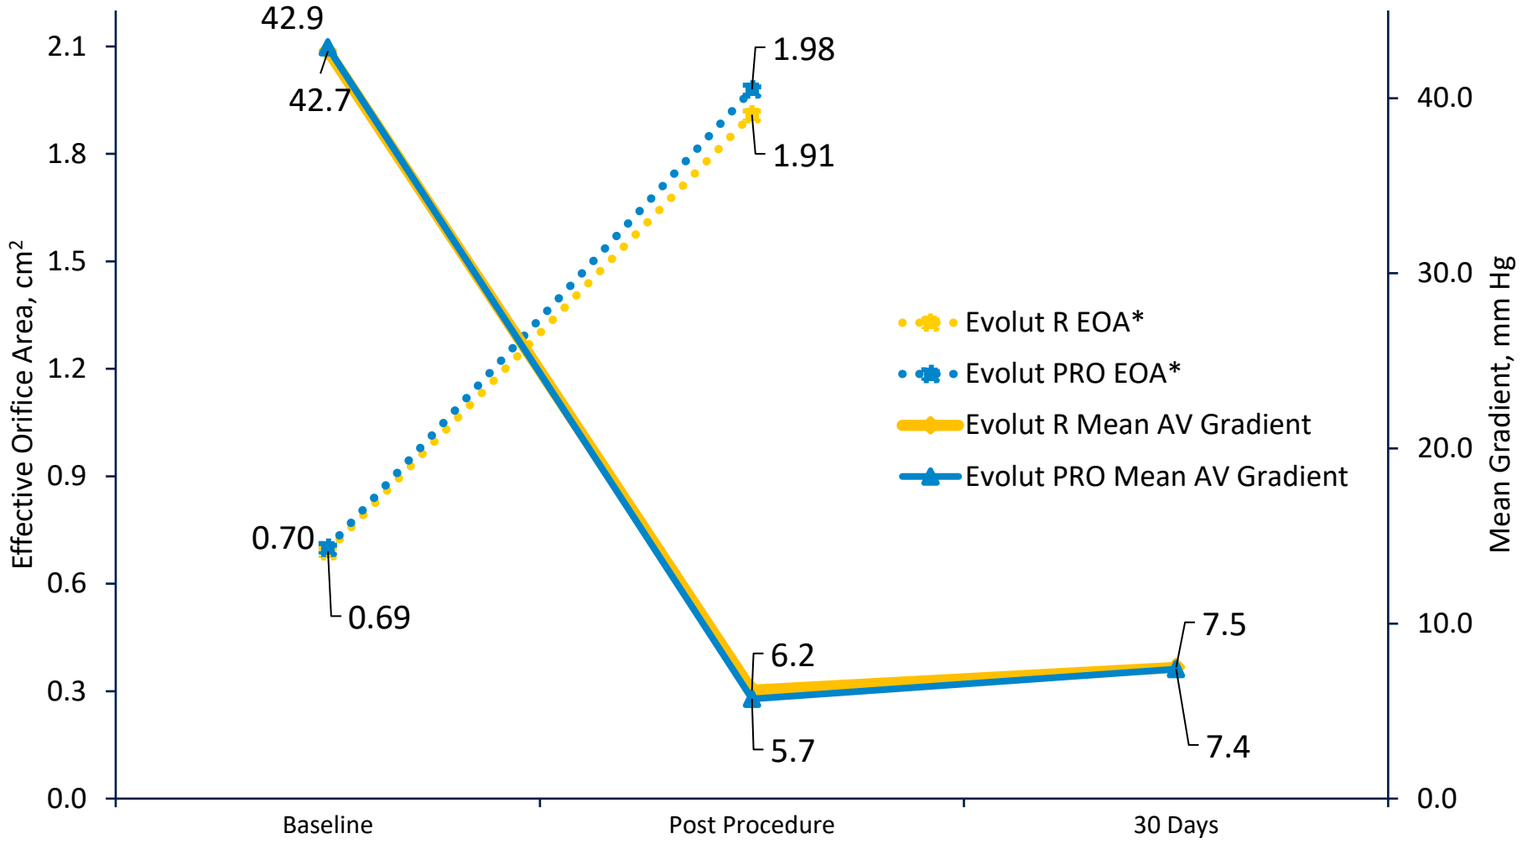
The Evolut TAV's supra-annular design enables excellent hemodynamic performance.

Medtronic

CONSISTENTLY EXCEPTIONAL HEMODYNAMICS MINIMIZES TRADEOFFS

No evidence of impact on the Evolut™ platform's industry-leading hemodynamics with the addition of the external tissue wrap.

Valve Hemodynamics



Baseline data from all attempted implants, post-procedural and 30-day data for implanted patients.

*EOA not collected at 30 days.

Forrest J, et al. 30-Day Outcomes Following Transcatheter Aortic Valve Replacement with the Evolut PRO Valve in Commercial Use: A Report from the STS/ACC TVT Registry™*. Presented at TCT 2018; September 21-25, 2018; San Diego, CA.

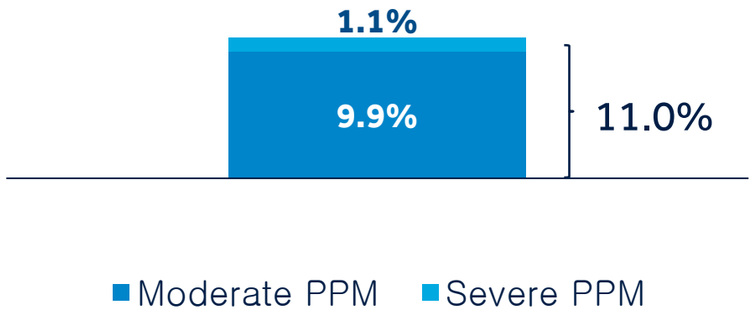
Medtronic

HEMODYNAMICS FOR THE LONG RUN

Evolut 30 Day Patient Prosthesis Mismatch in the MDT Low Risk Trial[1]



The Evolut System's low incidence of 30-Day Patient Prosthesis Mismatch suggests that its supra-annular valve design provides hemodynamic benefit for the younger, more active patient.

1. Popma JJ, Deeb GM, Yakubov SJ, et al. Transcatheter Aortic-Valve Replacement with a Self-Expanding Valve in Low-Risk Patients. N Engl J Med. May 2, 2019;380(18):1706-1715

Medtronic

EVOLUT PRO+ SYSTEM LOWEST DELIVERY PROFILE

Medtronic

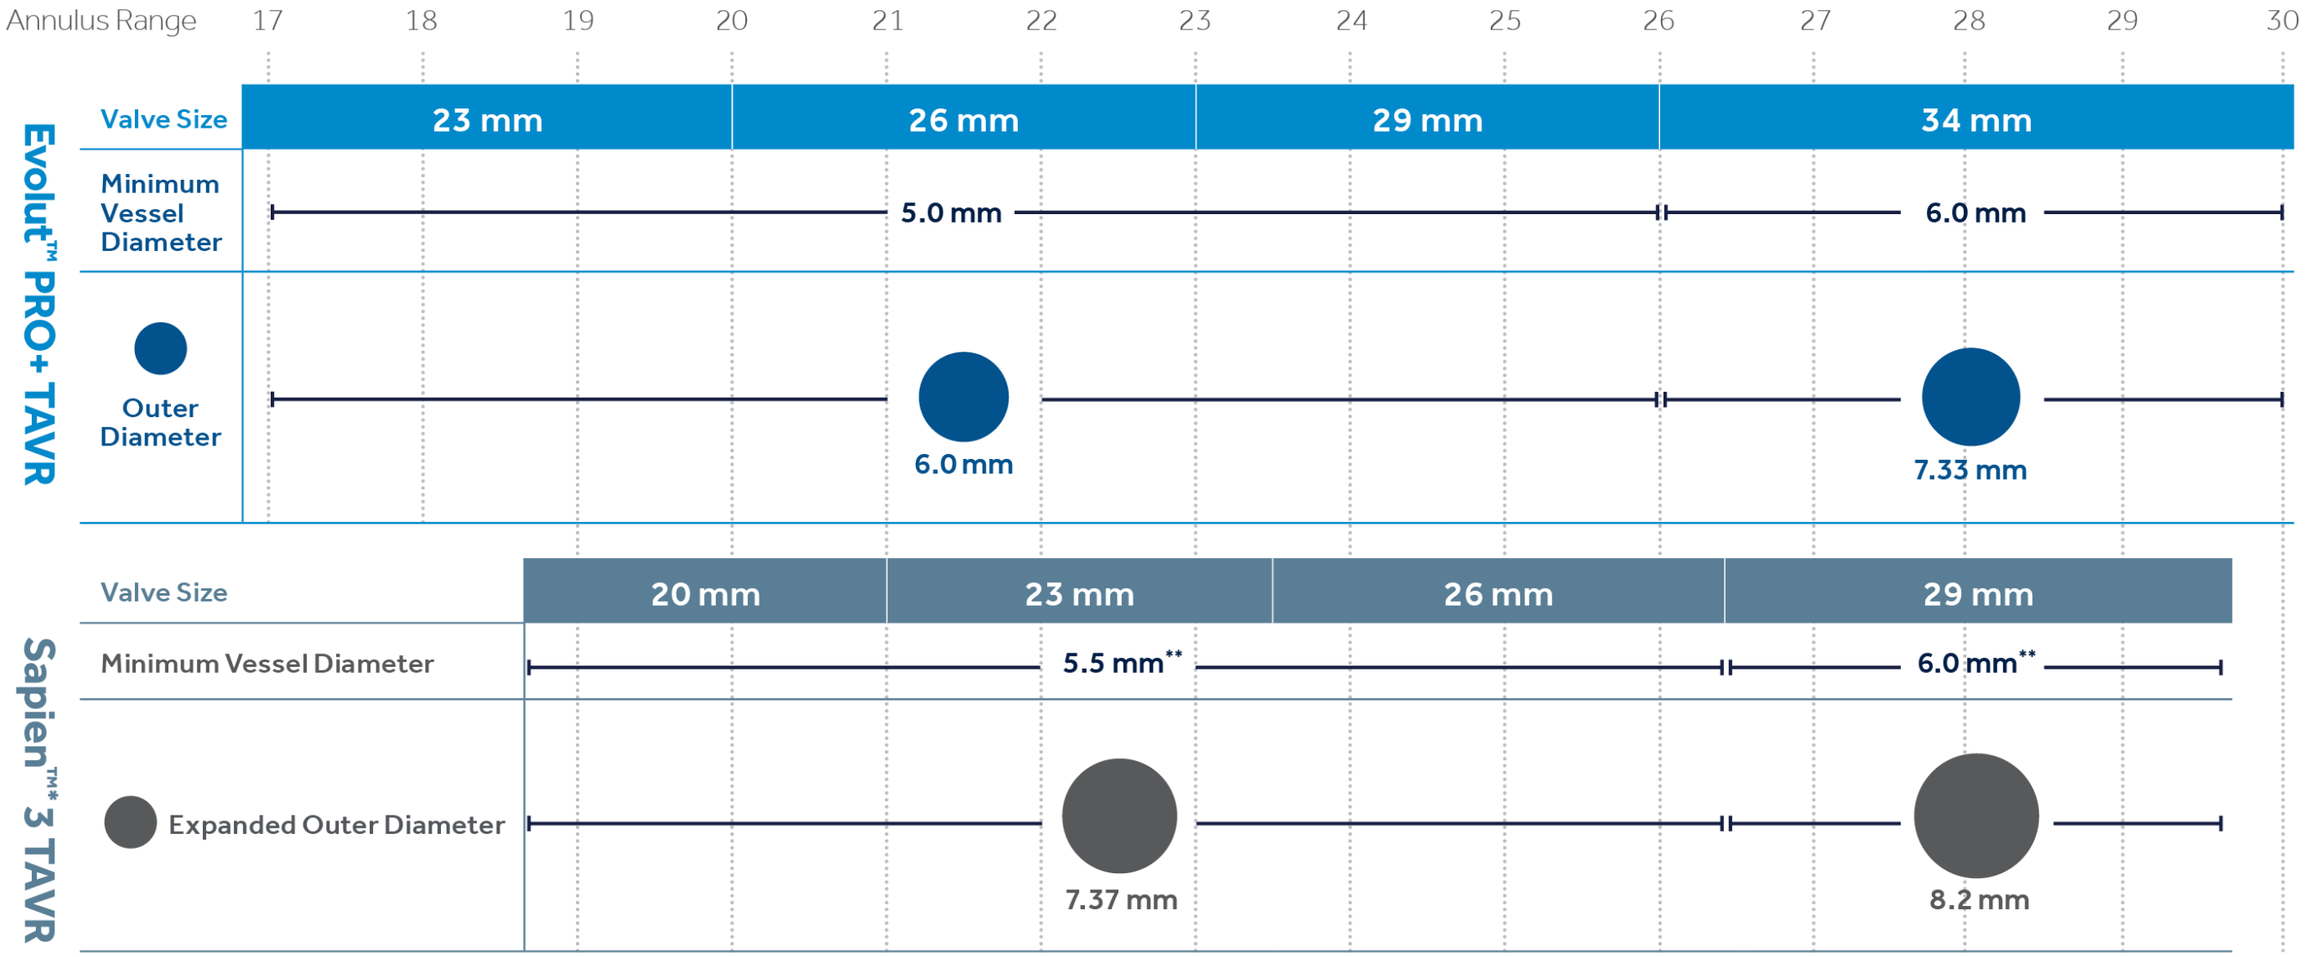
EVOLUT PRO+ SYSTEM HAS THE LOWEST DELIVERY PROFILE

EVOLUT PRO+ SYSTEM VS. SAPIEN™* 3 SYSTEM

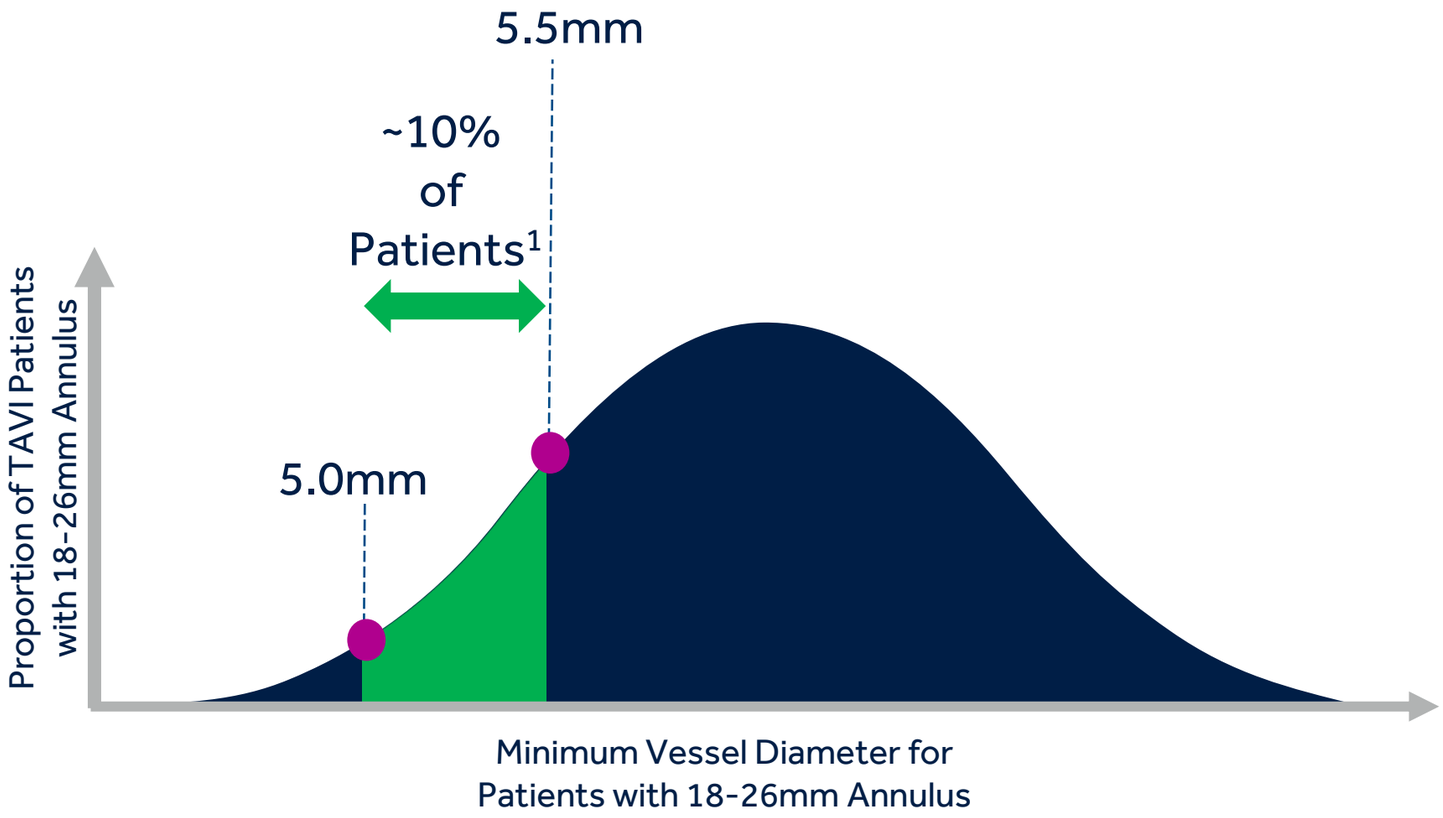


Sheath circular cross section images are not to scale, but are intended to demonstrate the relative sizes of the devices. The labeled sizes are accurate based on the references noted and the Evolut PRO+ System Labeling.

Parma, Variations in Outer Diameters of Femoral Sheaths Used in Transcatheter Aortic Valve Replacement, Presented at TVT2017.

Medtronic
Further, Together

WITH THE LOWEST DELIVERY PROFILE YOU CAN TREAT MORE PATIENTS WITH THE EVOLUT PRO+ SYSTEM



Only Medtronic TAVR is indicated to treat patients with access vessels as small as 5.0 mm.

~10%

Of patients have access vessels between 5.0 and 5.5mm[1]

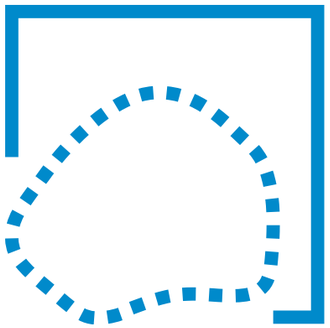
1. Medtronic Data on File

Medtronic

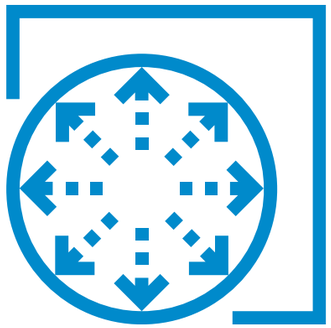
EVOLUT PRO+ SYSTEM ADVANCED SEALING

Medtronic
Further, Together

SEALING **MECHANISMS**

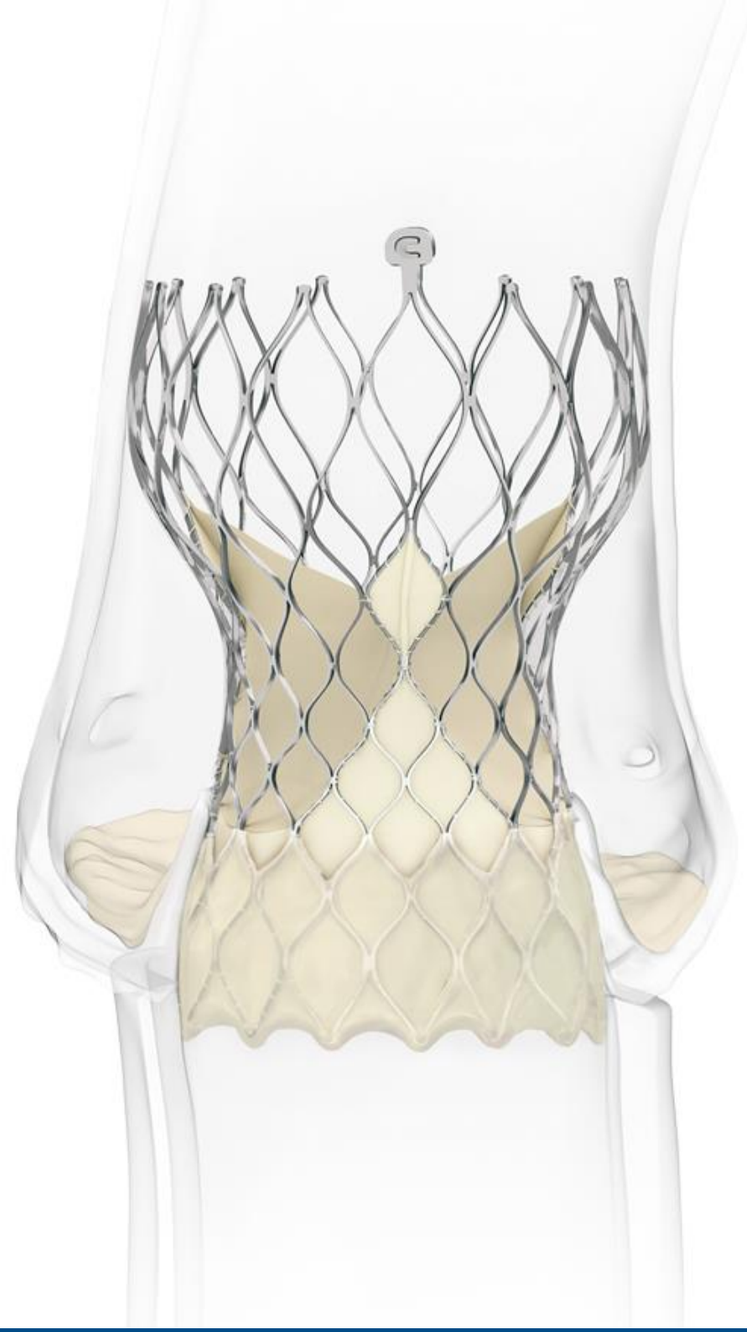


Conformable Frame
Self-expanding nitinol frame conforms to annulus



Consistent Radial Force
Frame oversizing and cell geometry provide consistent radial force across treatable annulus range

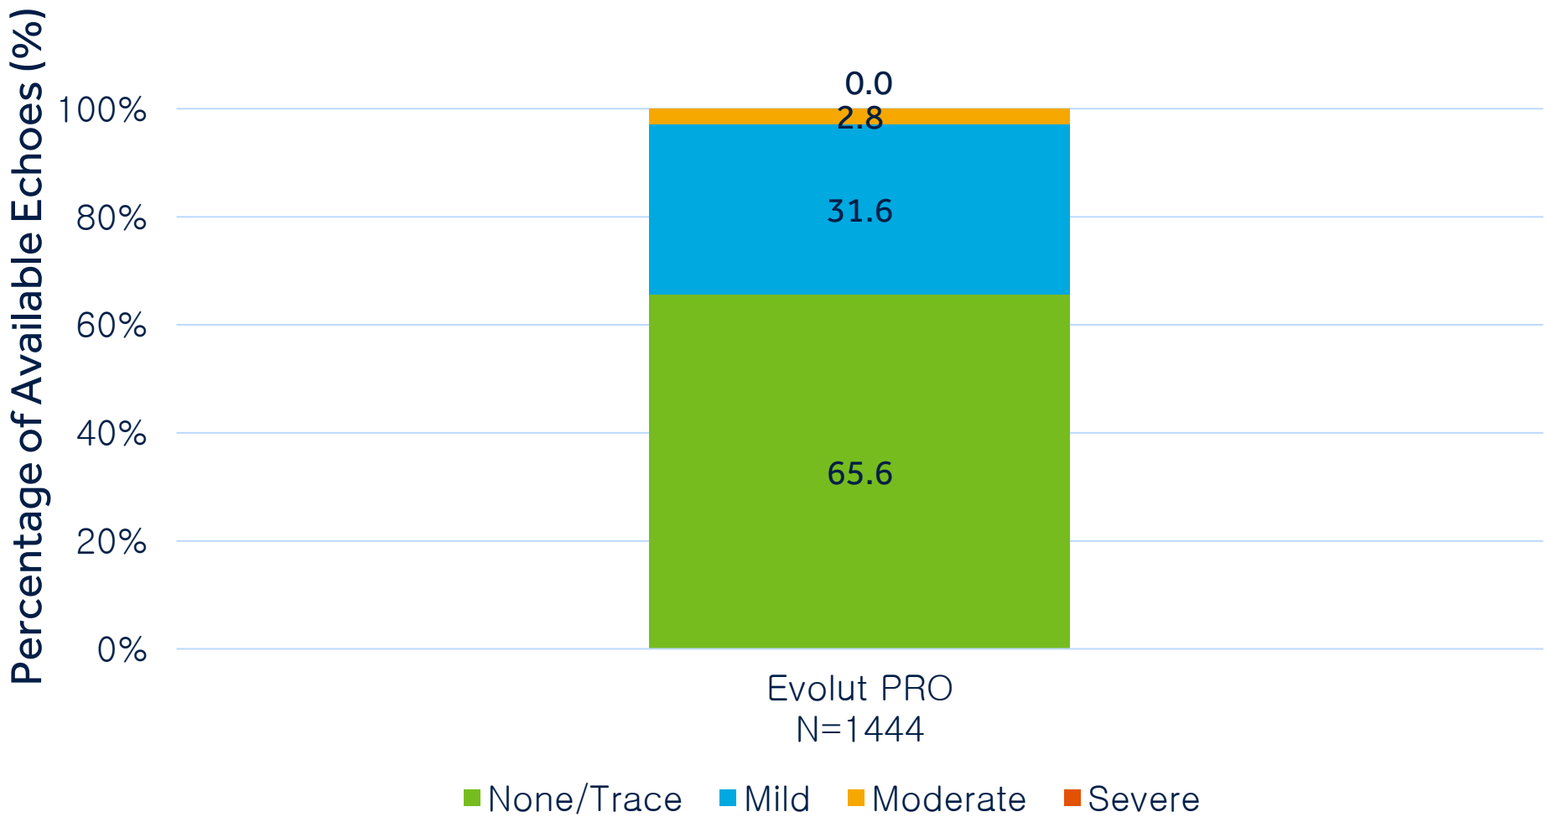
External Wrap
External tissue wrap increases surface contact with native anatomy



ADVANCED SEALING
REAL WORLD RESULTS

The external wrap on the Evolut PRO valve has shown advanced sealing with real world results and similar results can be expected from the 34mm Evolut PRO+ valve.

TOTAL AORTIC REGURGITATION AT 30-DAYS (TVT-R)



Forrest J, et al. 30-Day Outcomes Following Transcatheter Aortic Valve Replacement with the Evolut PRO Valve in Commercial Use: A Report from the STS/ACC TVT Registry™*. Presented at TCT 2018; September 21-25, 2018; San Diego, CA.

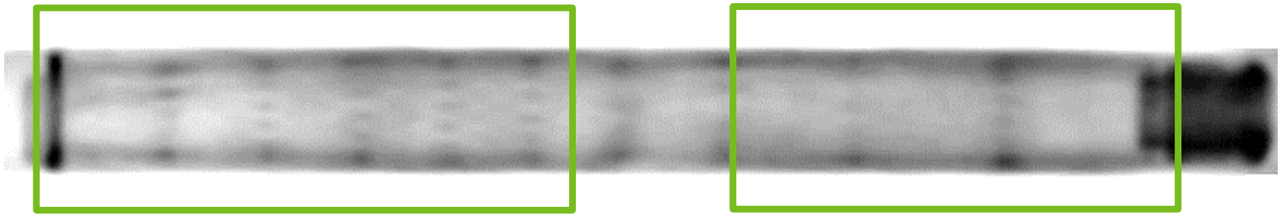
UPDATED FLOURO LOAD INSPECTION



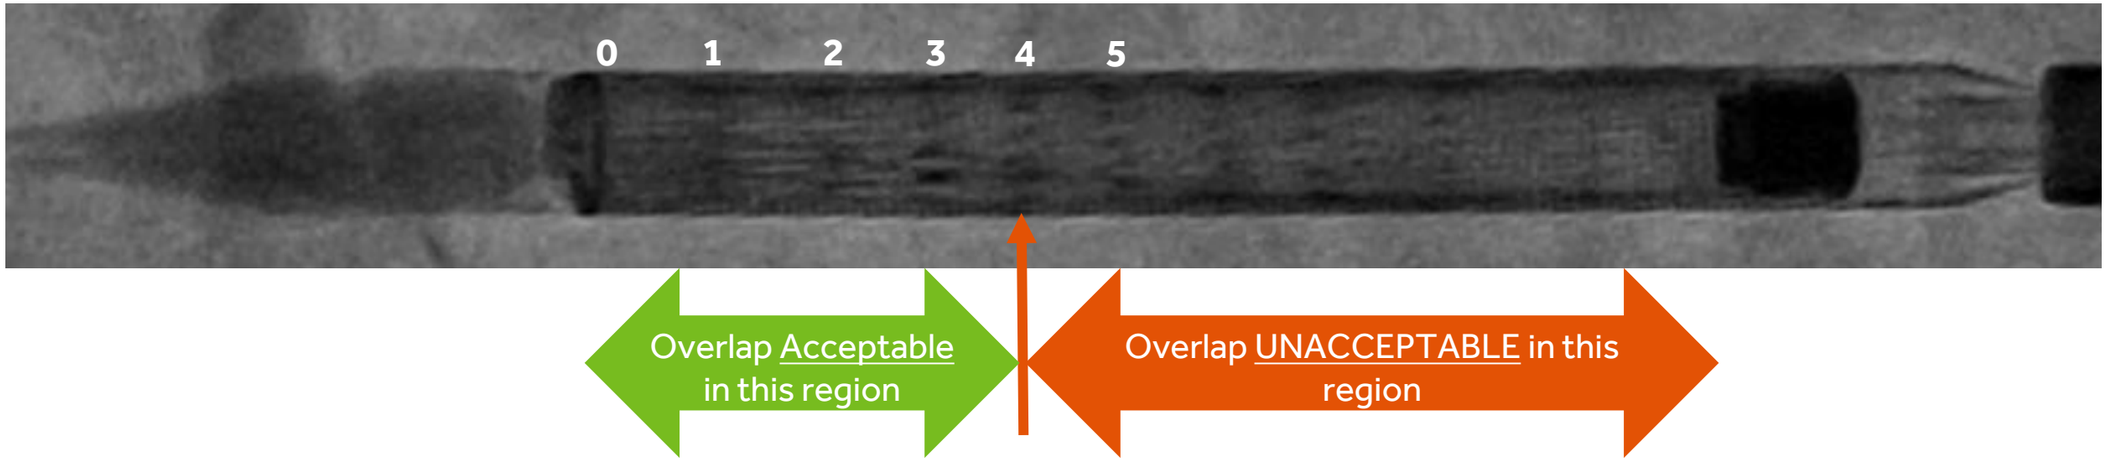
- Use the inspection to check for bent outflow crowns and severe inflow crown overlap.
  - Outflow crowns should be parallel to the distal end of the paddle attachment.
  - Inflow crown overlap should be **less than node 4**.
- Slowly **rotate the capsule 360°** when performing the fluoro check.

Note:

- It is no longer necessary to check for paddle out of pocket conditions during the fluoro load inspection.
- Tactile inspection is used to check that the capsule is straight and free of bends or curves.
- **The best image is an AP, high res, cine run.**

FLUORO LOAD CHECK
COUNTING NODES

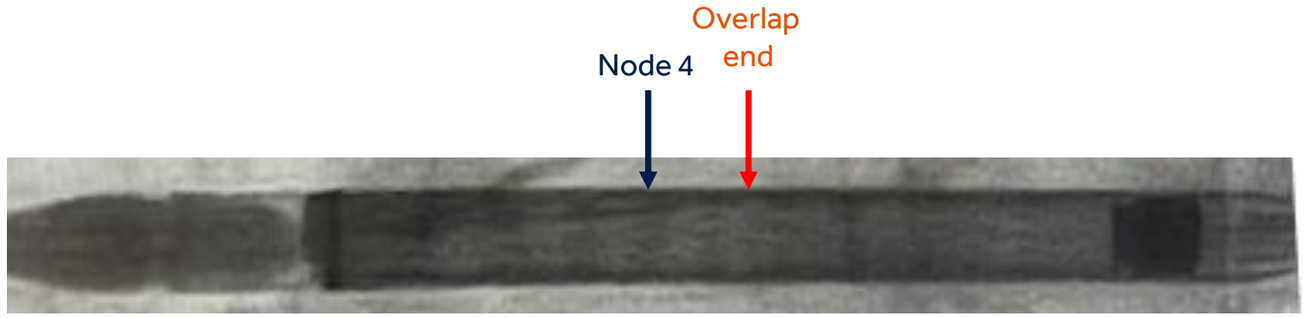
Under fluoro, nodes appears as bands around the capsule.



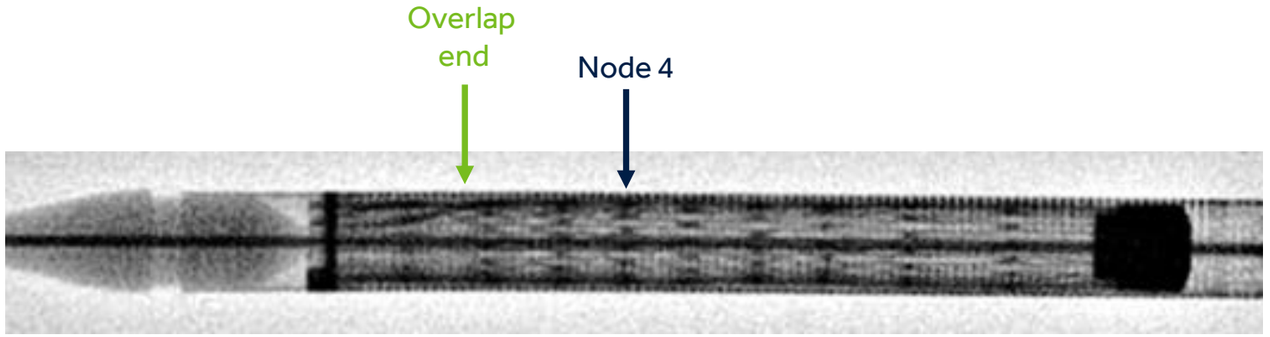
Inflow crown overlap appears as a non-uniform shadow starting at the inflow edge (node 0) and extending up the valve. Where the shadow ends or disappears is where the overlap ends.

FLUORO LOAD INSPECTION

INFLOW CROWN OVERLAP



Inflow crown overlap past node 4:
Unacceptable



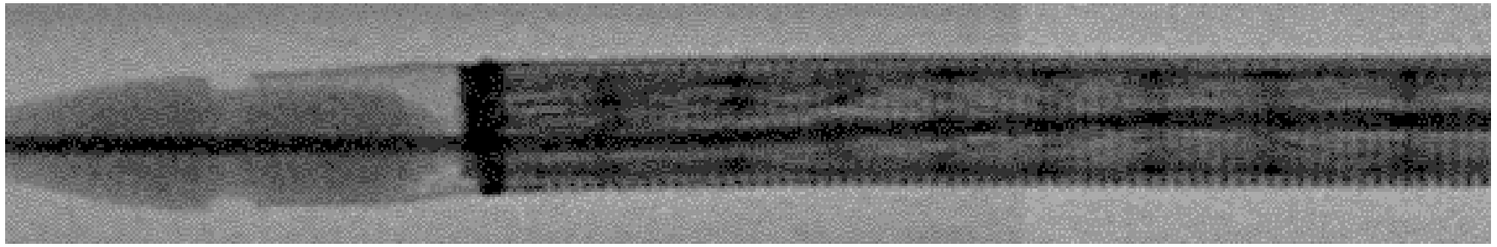
Inflow crown overlap less than node 4:
Acceptable

- Crown overlap in the inflow region may be observed during the fluoro load inspection.
- Inflow crown overlap is **unacceptable if up to or past node 4**; this is a misload and the entire system (valve, loading system, and delivery system) must be replaced.

- Inflow crown overlap **less than node 4 is acceptable.**
- Inflow crown overlap up to or past node 4 can lead to infolding upon deployment.

Medtronic

FLUORO LOAD INSPECTION
INFLOW CROWN OVERLAP CONSIDERATIONS

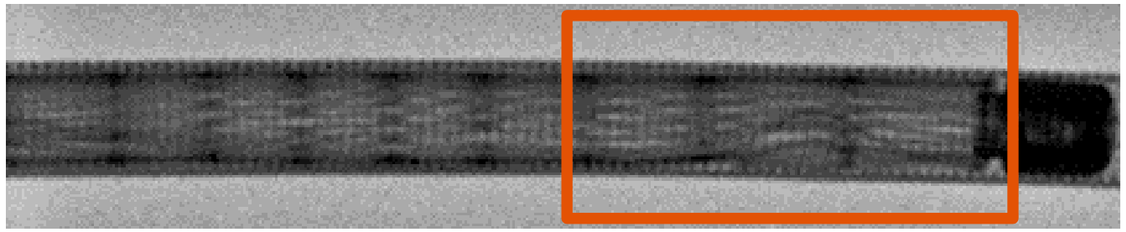


This fluoro image shows inflow crown overlap just short of node 4, which is acceptable.

Inflow crown overlap less than node 4 is acceptable and unlikely to result in infolding on initial deployment.

- Inflow crown overlap past node 4 is **rare** when the valve is loaded correctly.
- When improperly loaded, inflow crown overlap past node 4 is more likely to occur with the 34 mm Evolut PRO+ valve.
- Inflow crown overlap past node 3 and close to node 4 occurs more commonly with the 29 mm Evolut PRO+ valve, even when the valve has been loaded correctly.

FLUORO LOAD INSPECTION
OUTFLOW CROWNS



- Outflow crowns not aligned and/or not parallel to the paddle attachment indicate a misload.
- Shadow or outline present indicating a bent outflow strut

If any indication of a misload is identified, the valve, delivery system, and loading system must all be discarded and replaced.

OPTIMIZE PRO INTERIM RESULTS

SUMMARY

- Thirty-day outcomes from the Optimize PRO study interim analysis demonstrate excellent outcomes.
  - No deaths
  - No disabling strokes
  - Low pacemaker implantation rates (8.8% for combined cohorts)
- Extremely low rates of total AR.
  (80.4% none/trace; 19.6% mild, in combined cohorts)
- Excellent post-procedure hemodynamics (mean gradient 8.1 mmHg).
- 1 valve implanted in all patients.
- Median length of stay was 1 day.
- Outcomes expected to improve with Cusp Overlap experience and continued refinement of procedural technique and accessories (wire choice).
- Key steps in procedure technique to be confirmed with additional patients and longer follow-up (clinical study ongoing to 600 patients).
