

# QFR for All Lesions and Patients?

Current Level of Evidence

Niels Ramsing Holm

# Disclosure Statement of Financial Interest

Within the past 12 months, I or my spouse/partner have had a financial interest/arrangement or affiliation with the organization(s) listed below.

## Affiliation/Financial Relationship

- Grant/Research Support
  
  
  
  
  
  
  
  
  
  
- Consulting Fees/Honoraria

## Company

- Medis medical imaging bv.
  
- Abbott
  
- Biotronik
  
- Boston Scientific
  
- REVA Medical
  
- Abbott
  
- Terumo
  
- Cardirad

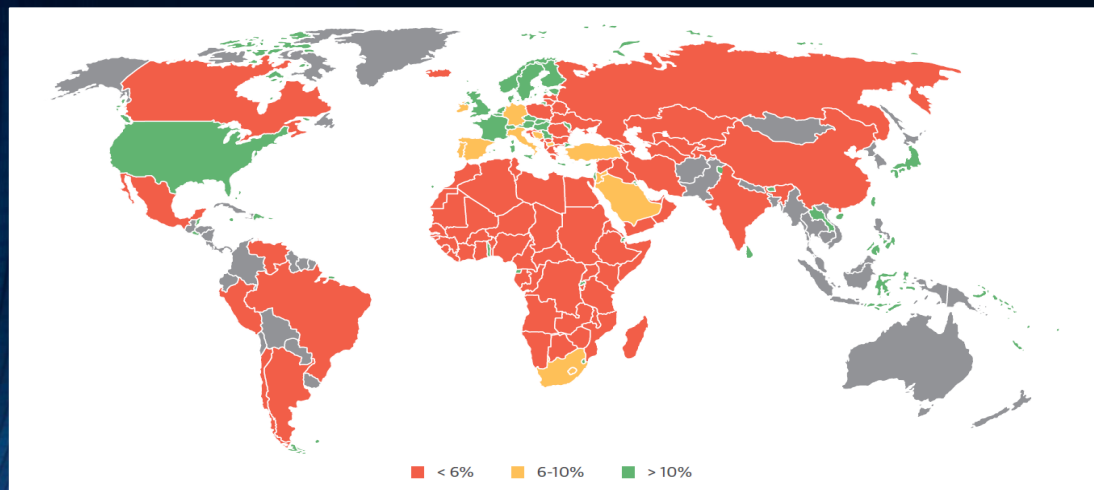

# Functional stenosis evaluation

2018 ESC/EACTS Guidelines on myocardial revascularization

Recommendations	Class <sup>a</sup>	Level <sup>b</sup>
When evidence of ischaemia is not available, FFR or iwFR are recommended to assess the haemodynamic relevance of intermediate-grade stenosis. <sup>15,17,18,39</sup>	I	A
FFR-guided PCI should be considered in patients with multivessel disease undergoing PCI. <sup>29,31</sup>	IIa	B
IVUS should be considered to assess the severity of unprotected left main lesions. <sup>35-37</sup>	IIa	B

European Heart Journal, September 2018

# FFR usage world-wide

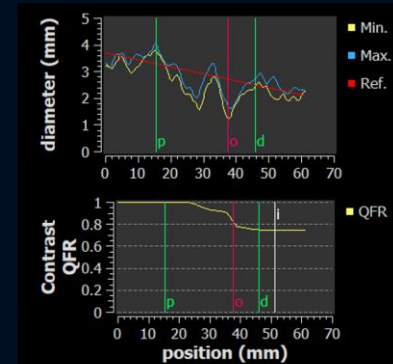

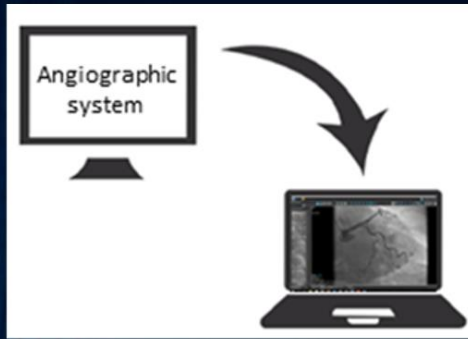

Götberg et al., JACC 2017

Poor utilization of pressure wire based functional stenosis evaluation in most areas

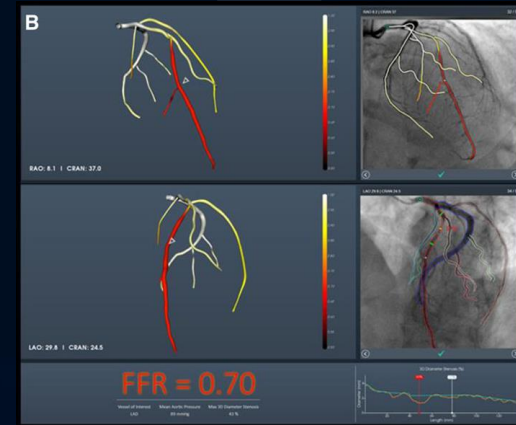

- Physician's beliefs
- Expensive
- Economical incentives
- Side effects
- Risk

# Angio-based physiology

# Angio-based physiology systems

Fearon et al. Circulation 2018

# Prospective studies on QFR

## Paired assessment of QFR and FFR

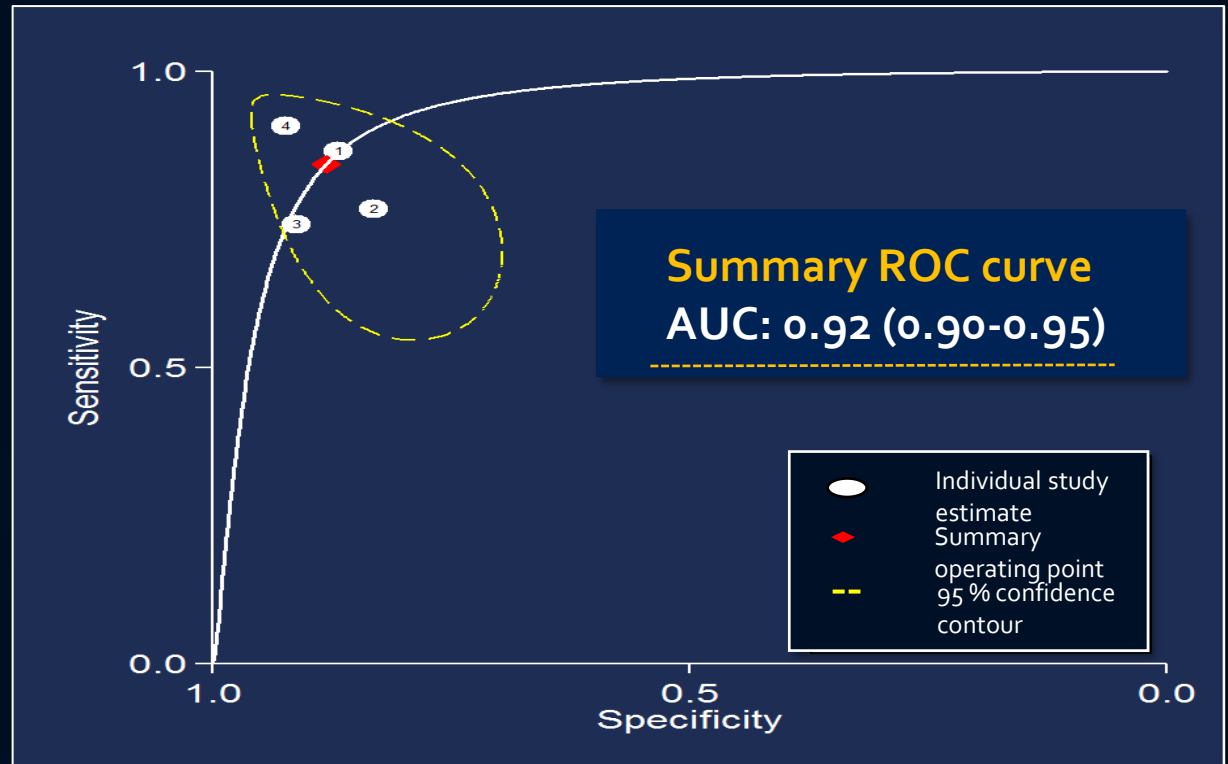

- FAVOR Pilot [Tu et al., JACC Intv., 2016](#)
- WIFI II [Westra et al., Circulation Img, 2018](#)
- FAVOR II China [Xu et al, JACC 2017](#)
- FAVOR II Europe Japan [Westra et al., JAHA 2018](#)

Total patients: 819    Vessels: 969    Non - VHD

# QFR Diagnostic performance

Westra et al. CCI 2019

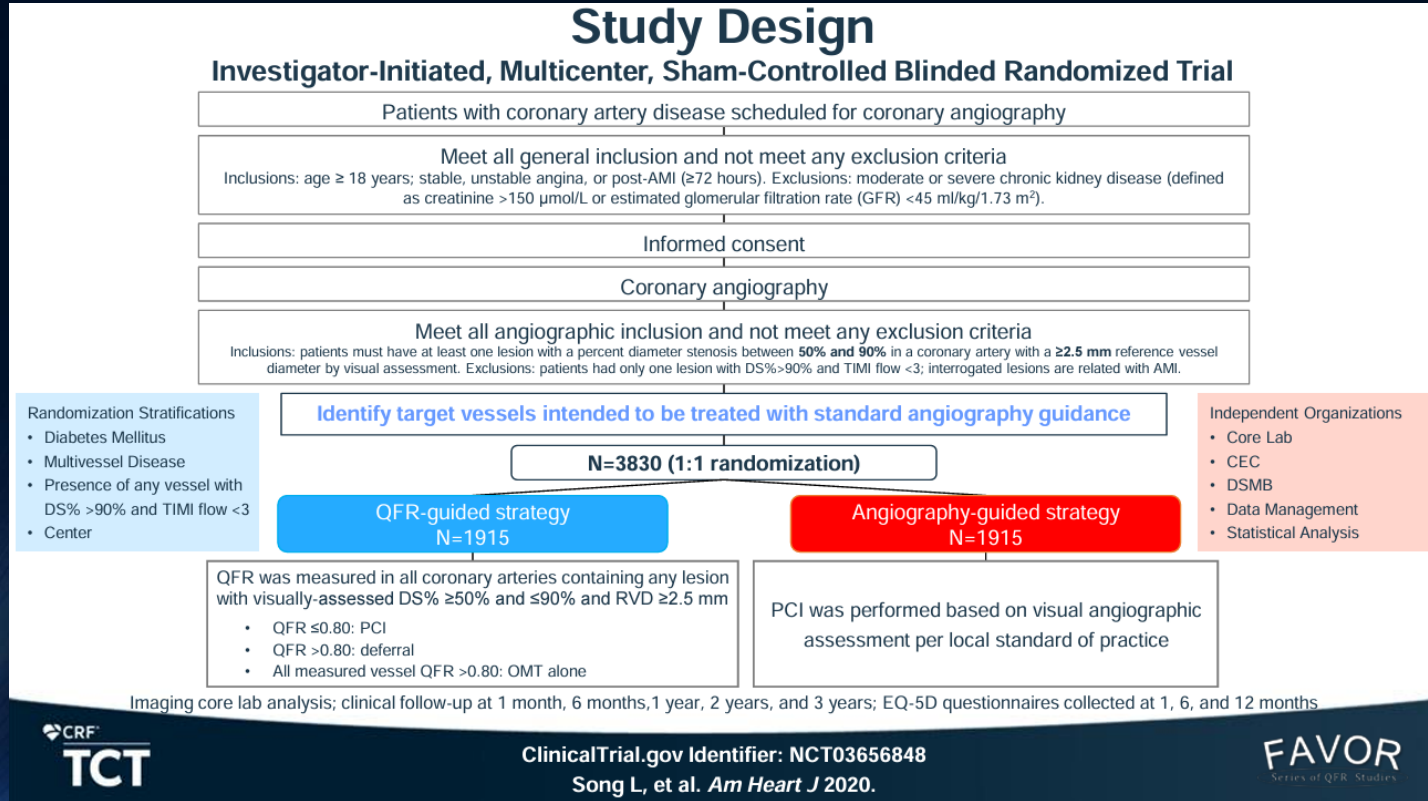

# FAVOR III China – A landmark trial

## Angiographic quantitative flow ratio-guided coronary intervention (FAVOR III China): a multicentre, randomised, sham-controlled trial

*Bo Xu\*, Shengxian Tu\*, Lei Song\*, Zening Jin, Bo Yu, Guosheng Fu, Yujie Zhou, Jian'an Wang, Yundai Chen, Jun Pu, Lianglong Chen, Xinkai Qu, Junqing Yang, Xuebo Liu, Lijun Guo, Chengxing Shen, Yaojun Zhang, Qi Zhang, Hongwei Pan, Xiaogang Fu, Jian Liu, Yanyan Zhao, Javier Escaned, Yang Wang, William F Fearon, Kefei Dou, Ajay J Kirtane, Yongjian Wu, Patrick W Serruys, Weixian Yang, William Wijns, Changdong Guan, Martin B Leon†, Shubin Qiao\*†, Gregg W Stone†, and the FAVOR III China study group‡*

*LANCET 2021*

# FAVOR III China

# FAVOR III China

Xu et al. LANCET 2021

# FAVOR III China

QFR guiding resulted in

- Fewer patients stented
- Fewer stents implanted
- Shorter procedure time

Xu et al. LANCET 2021

# Angio-based physiology vs. angio: RCTs

- FAVOR III China      QFR vs angio      3830 pts ✓
- PIONEER IV      QFR vs standard      2450 pts
- FAVOR<sub>4</sub>-QVAS      QFR vs angio      792 pts

# Angio-based physiology vs. FFR: RCTs

- FAVOR III Europe      QFR vs FFR      2000 pts
- FAST III      vFFR vs FFR      2228 pts
- FLASH II      caFFR vs FFR      2450 pts
- ALL-RISE      FFR<sub>angio</sub> vs FFR      1924 pts

# QFR for other lesion subsets

## Bifurcation lesions

- QFR – paucity in data
- $\mu$ FR – Murray-based single view
  - Good correlation with FFR  
Wu et al Circulation Card Img 2024

Medis medical imaging

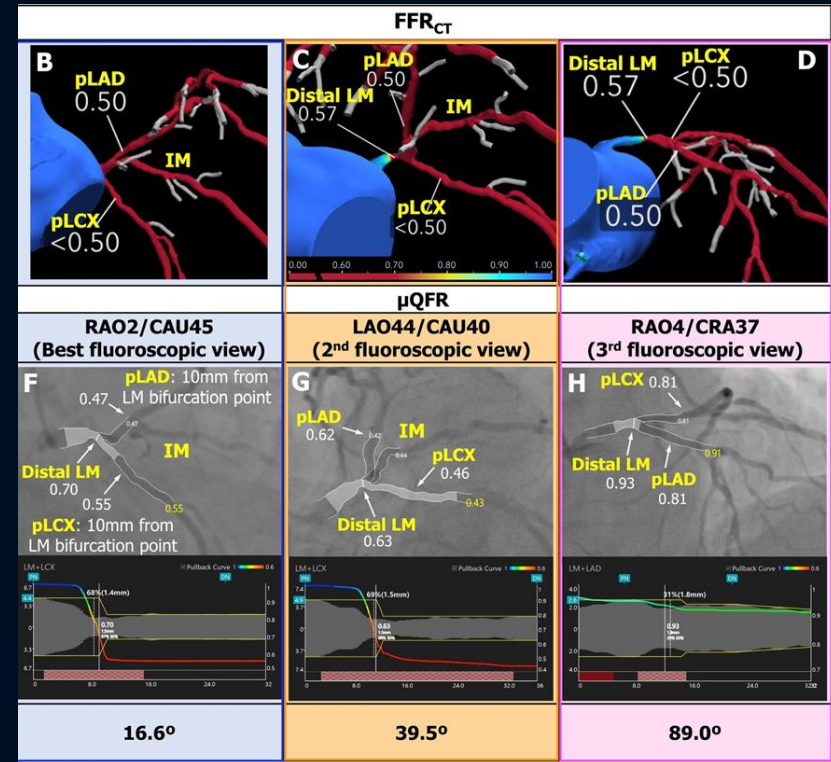

Kotoku et al IJCI2024

# QFR for other lesion subsets

## Left Main

- QFR: LM excluded from trials
- Modest accuracy Yuasa et al CCI2023
- Projections very important
  - $\mu$ FR good accuracy with CT identified optimal projection Kotoku et al IJCI2024
  - Circumflex ostium not visible in 40% cases Tu et al IJC2012

More evidence needed

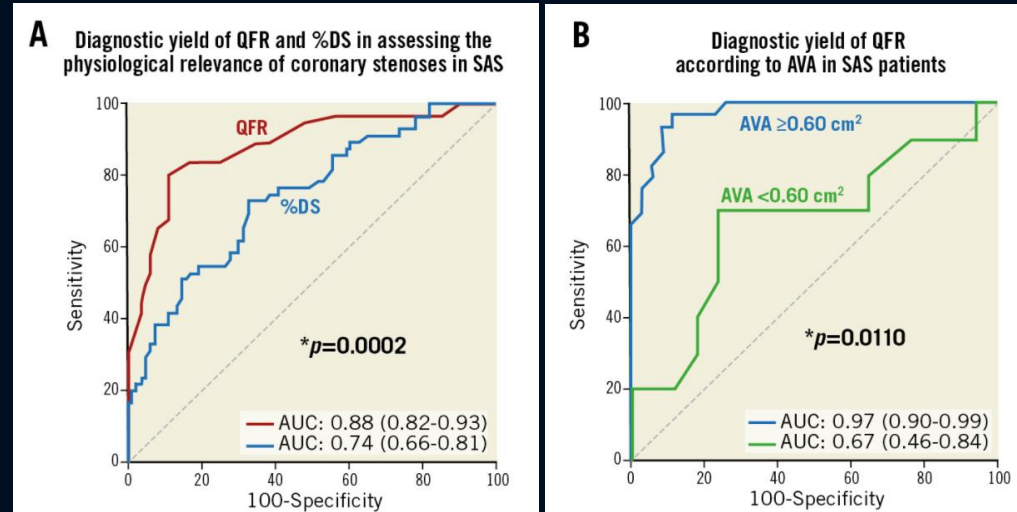

Kotoku et al IJCI2024

# QFR in pts with aortic stenosis

Paired QFR and FFR in 118 patients with either

- Valve area < 1.0 cm<sup>2</sup>
- Indexed valve area < 0.6 cm<sup>2</sup>/m<sup>2</sup> body surface area
- Flow-pressure parameters (mean gradient > 40 mmHg)
- Maximum jet velocity > 4.0 m/s, and velocity ratio < 0.25

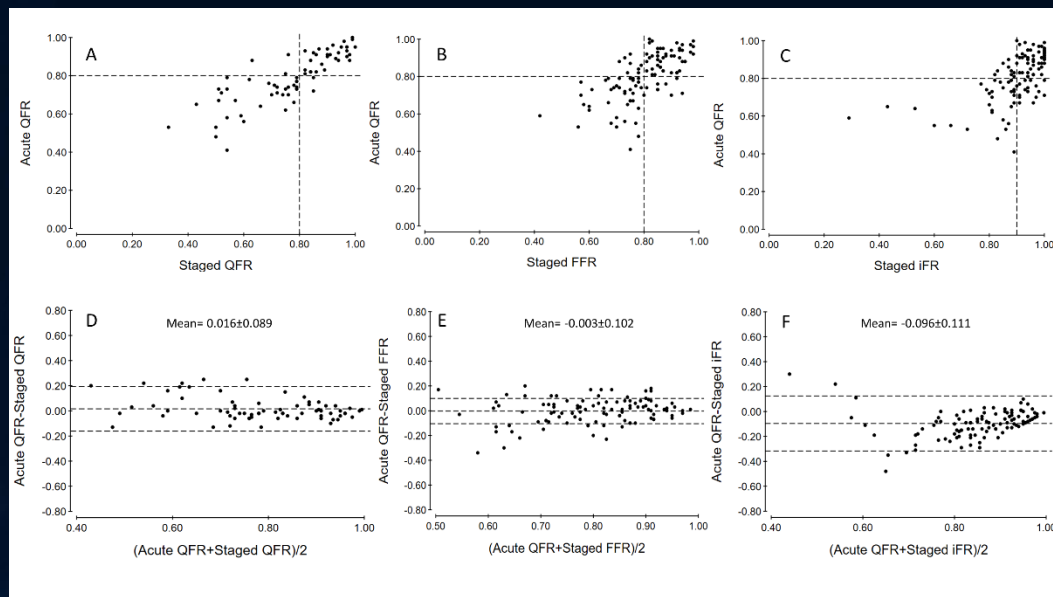

Hernán Mejía-Rentería. EuroIntervention

Pre-TAVI QFR – good correspondance with post TAVI FFR Sejr-Hansen et al. CCI 2021

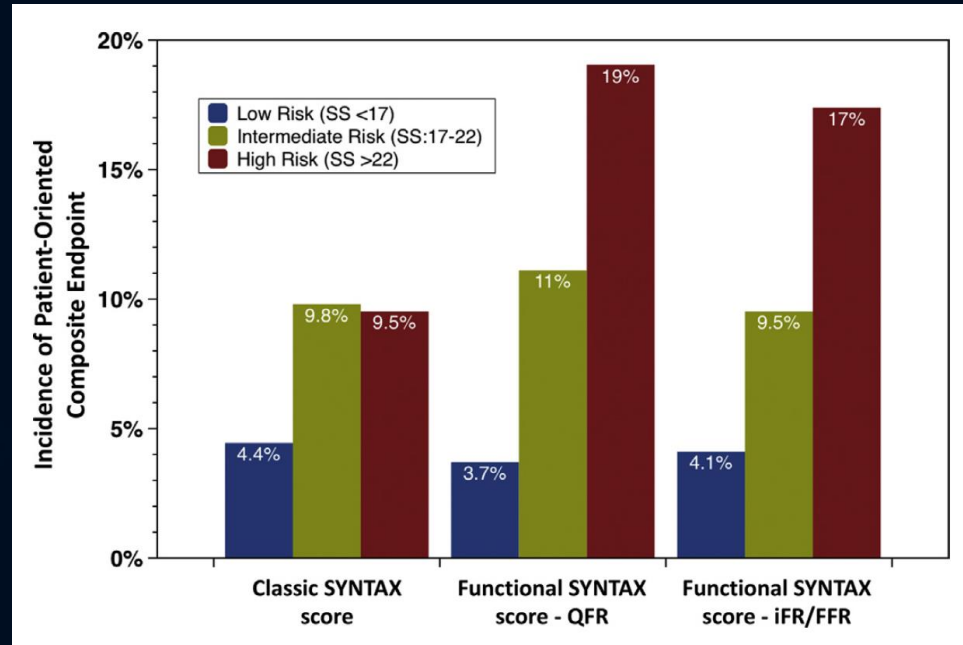

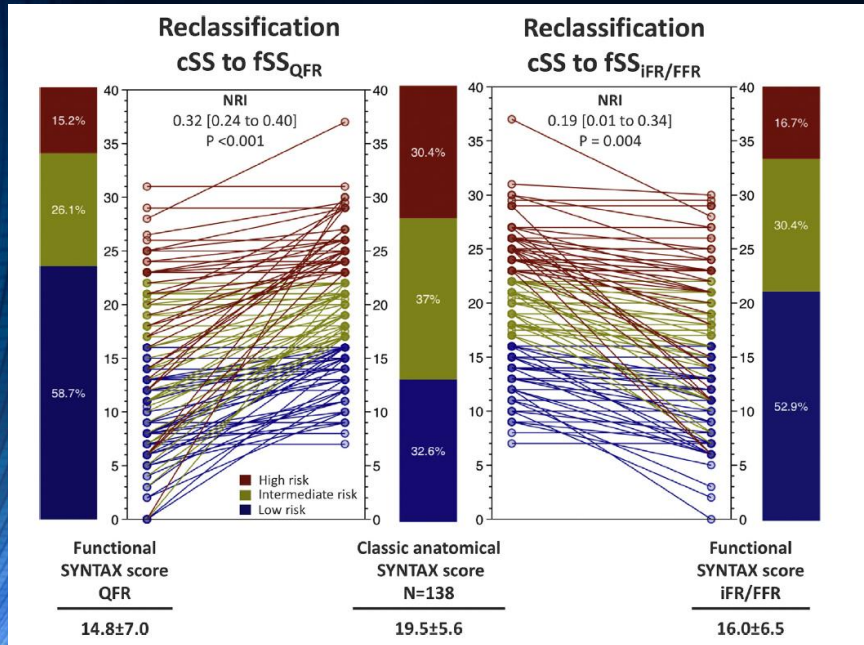

# QFR in ACS

Paired QFR during acute procedures - and FFR  
at staged procedures compare well Sejr-Hansen et al. CCI 2021

# Computed functional SYNTAX score

- 3-vessel level (functional SYNTAX score:  $fSS_{QFR}$ )

Asano et al. JACC Cardiovascular Interventions 2019

# Stent sizing

## Lesion Results

Lesion length	30.5 mm
Diameter stenosis	54.5 %
Area Stenosis	71.2 %
Proximal diameter	3.8 - 4.1 mm
MLD	1.2 mm
Distal diameter	2.4 - 2.8 mm
Reference diameter	2.7 mm

Plan:

3.0 x 33mm stent

Postdilate proximal with 4.0 mm NC balloon

# Assessment of microvascular resistance

- **Index of microvascular resistance** (angio-IMR, AIMR, aIMR)
  - Several methods presented (at least 4 formula)
    - Tebaldi et al *Journal of Interventional Cardiology* 2021
    - Mejia-Renteria et al *EuroIntervention* 2021
    - Milzi et al *Frontiers in Cardiovascular Medicine* 2022
  - Limited validation (cut-off, verification, reproducibility)

# Conclusions

- Multiple systems approved for use in various regions
- Major differences in body of supporting evidence
- FAVOR III China showed clear advantages of QFR over angio guided PCI
- Multiple ongoing RCTs
- Differences between systems may be important
- Further validation required for multiple aspects of use

Thank you
