Thick Calcium

Study Flow Chart

Multivariate Linear Regression Model to Predict Stent Expansion

Covariate	Regression Coefficient	95% Confidence Interval	p Value
Maximum calcium angle (per 180°)	-7.43	-12.6 to -2.21	<0.01
Maximum calcium thickness (per 0.5 mm)	-3.40	-6.35 to -0.45	0.02
Calcium length (per 5 mm)	-3.32	-4.09 to -0.55	0.01

The variables that were included in the model, but found not significant: The number of calcium deposits, Total stent length, Maximum inflation pressure, Balloon-to-artery ratio.

Calcium Scoring System

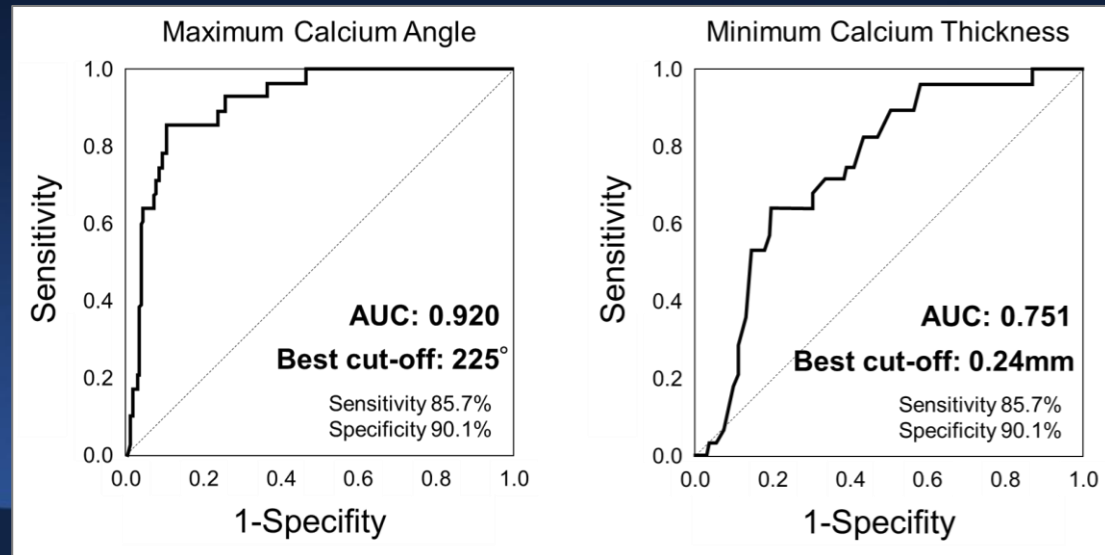

OCT-based CVI Score	
Angle	$\leq 180^\circ$ → 0 point
	$> 180^\circ$ → 2 points
Thick ness	≤ 0.5 mm → 0 point
	> 0.5 mm → 1 point
Length	≤ 5.0 mm → 0 point
	> 5.0 mm → 1 point
Total score: 0 to 4 points	

Calcium Score Predicts Stent Expansion

CVI score	0	1	2	3	4	p Value
Expansion at target lesion calcium, %	99	98	86	98	78	<0.01
Expansion at minimum stent area, %	91	85	80	82	69	<0.01

Ca Morphology to Predict Ca Fracture without Atherectomy

Comparison between Pre and Post IVUS in LAD

Post-Stent

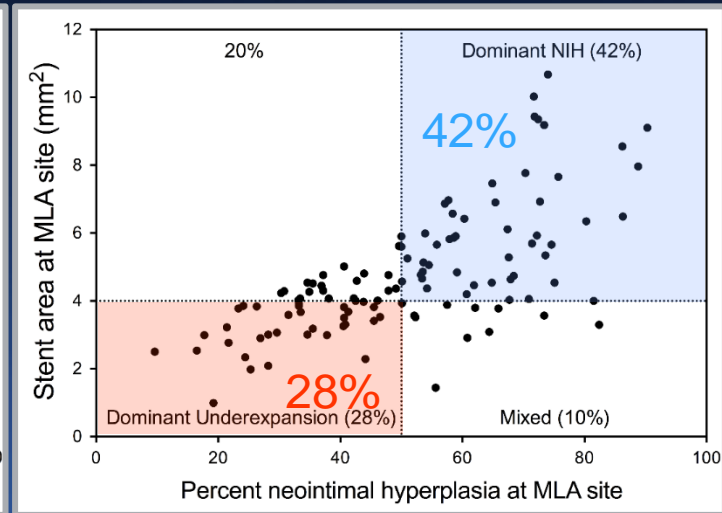

Different Mechanism between ISR ≤ 1 Year vs >1 Year in 2nd GEN DES by OCT

Dominant stent under-expansion: Minimum stent area $< 4\text{mm}^2$
Dominant NIH: % Neointimal hyperplasia (NIH) $> 50\%$

Duration from implantation
 ≤ 1 year (n=57)

Duration from implantation
 > 1 year (n=114)

Successful Treatment by ELCA for ISR - Stent Under-expansion due to Underlying Calcium

Minimum Lumen Area
2.76 mm²

Minimum Lumen Area
6.34 mm²

With vs without ELCA to Treat ISR with Peri-Stent Severe Calcium

	ELCA (n=23)	POBA (n=58)	P
Max peri-stent Ca arc, °	289 (231,360)	258 (210,307)	0.09
Pre Min Lumen Area, mm ²	2.0 (1.3, 2.6)	1.8 (1.4, 2.1)	0.01
Pre Min Stent Area, mm ²	3.2 (2.3, 4.6)	3.5 (3.1, 4.2)	0.41
Final Min Lumen Area, mm ²	4.8 (3.3, 5.6)	3.5 (2.8, 4.1)	0.01
Final Min Stent Area, mm ²	6.2 (4.8, 7.1)	4.7 (3.8, 5.4)	0.01
Final Ca Fracture	61%	12%	0.01

Neointimal Calcium Predict New Stent Expansion

Summary

- 1. Angiographic calcium detection depends on the total volume of calcium and angiographic invisible calcium (thin calcium) dose not inhibit stent expansion.**
- 2. The prediction of new stent expansion of de novo or neointimal calcium in the old stent is similar (calcium thickness, angle, length=calcium volume is important).**
- 3. The mechanism of good stent expansion in the severe calcified lesion is calcium fracture which can be achieved by modification of surface of calcium.**
- 4. Though OCT is better for guidance of severe calcified lesion, high definition IVUS seems to be promising to detect calcium fracture.**
