1. **Requirement for emergent coronary artery bypass surgery following percutaneous coronary intervention in the stent era**
   Roy, P., et al.  

2. **Baseline coronary angiographic findings in the Bypass Angioplasty Revascularization Investigation 2 Diabetes trial (BARI 2D)**
   Schwartz, L., et al.  

3. **Percutaneous versus surgical revascularization for multivessel coronary artery disease: a single center 10 year follow-up of SOS trial patients**
   Buszman, P., et al.  

4. **PCI versus CABG for multivessel coronary disease in diabetics**
   Tarantini, G., et al.  

5. **The Bypass Angioplasty Revascularization Investigation 2 Diabetes randomized trial of different treatment strategies in type 2 diabetes mellitus with stable ischemic heart disease: impact of treatment strategy on cardiac mortality and myocardial infarction**

6. **Economic outcomes of treatment strategies for type 2 diabetes mellitus and coronary artery disease in the Bypass Angioplasty Revascularization Investigation 2 Diabetes trial**
   Hlatky, M.A., et al.  
7. Comparison of drug-eluting stents and coronary artery bypass surgery for the treatment of multivessel coronary disease: three-year follow-up results from a single institution
Li, Y., et al.

8. Improving long-term outcomes following coronary artery bypass graft or percutaneous coronary revascularisation: results from a large, population-based cohort with first intervention 1995-2004
Blackledge, H.M. and I.B. Squire

9. Sirolimus-eluting stents, bare metal stents or coronary artery bypass grafting for patients with multivessel disease including involvement of the proximal left anterior descending artery: analysis of the Arterial Revascularization Therapies study part 2 (ARTS-II)
Kukreja, N., et al.

10. Routine intraoperative completion angiography after coronary artery bypass grafting and 1-stop hybrid revascularization results from a fully integrated hybrid catheterization laboratory/operating room
Zhao, D.X., et al.

11. Coronary artery bypass surgery compared with percutaneous coronary interventions for multivessel disease: a collaborative analysis of individual patient data from ten randomised trials
Hlatky, M.A., et al.
12. A randomized trial of therapies for type 2 diabetes and coronary artery disease

13. CABG vs. stenting--clinical implications of the SYNTAX trial
Lee, T.H., L.D. Hillis, and E.G. Nabel

14. Percutaneous coronary intervention versus coronary-artery bypass grafting for severe coronary artery disease
Serruys, P.W., et al.

15. Prior coronary artery bypass graft patients with ST-segment elevation myocardial infarction treated with primary percutaneous coronary intervention
Welsh, R.C., et al.

16. Randomized comparison of percutaneous coronary intervention with coronary artery bypass grafting in diabetic patients. 1-year results of the CARDia (Coronary Artery Revascularization in Diabetes) trial
