

Learning from the Cases:

When I Need Imaging I Reach for OCT Because...

Keimyung University Dongsan Medical Center

Cardiovascular Interventions & Imaging

Yoon Hyuck-Jun

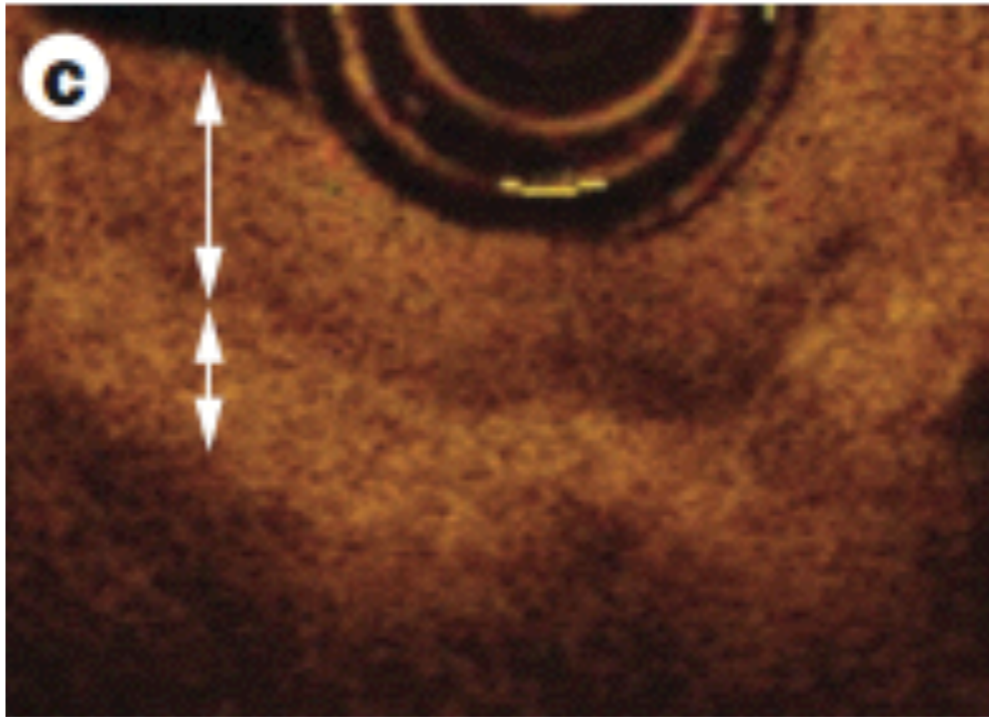

4 Reasons Why I Choose OCT...

	ESC	AHA/ACC
OCT	Class IIa (level of evidence: C) OCT to assess mechanisms of stent failure Class IIb (level of evidence: C) OCT in selected patients to optimise stent implantation	The appropriate role for optical coherence tomography in routine clinical-decision making has not been established

OCT may be used to provide additional and complementary information to coronary angiography.

When I need OCT imaging

For ambiguous lesion

Case 1 // 48 YO male, Stable Angina

Case 1 // 48 YO male, Stable Angina

Case 1 // 48 YO male, Stable Angina

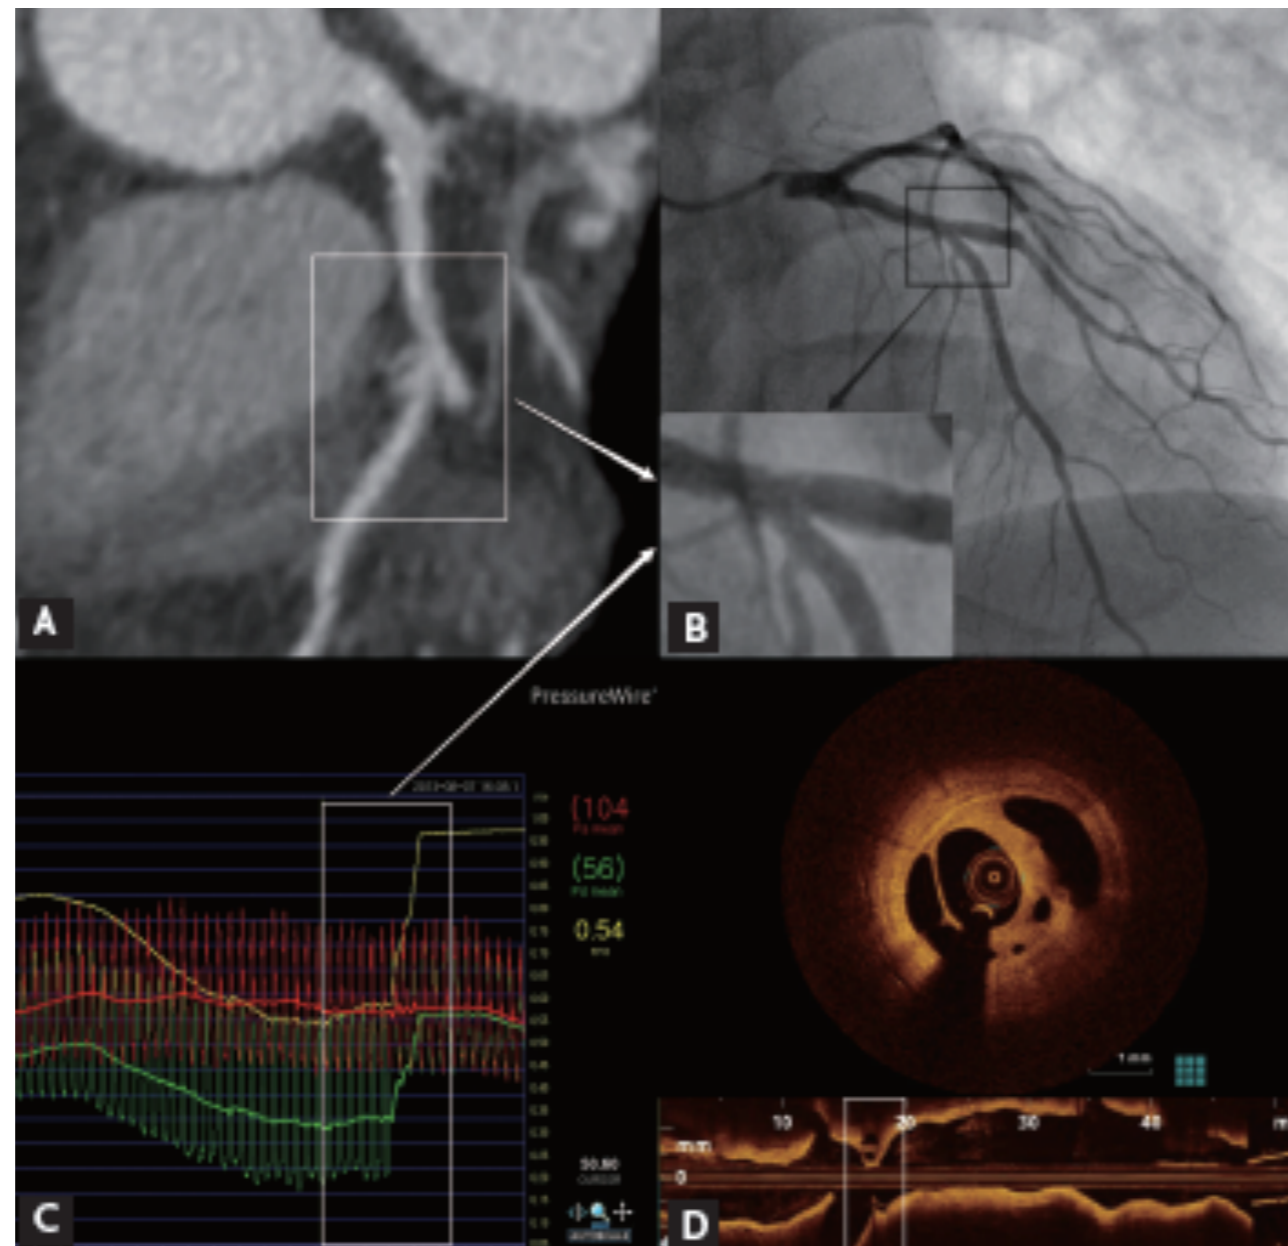

Case 1 // 48 YO male, Stable Angina

Angiographically minimal but functionally significant coronary lesion confirmed by optical coherence tomography

Hyuck-Jun Yoon, Yun-Kyeong Cho, Chang-Wook Nam, Kwon-Bae Kim, and Seung-Ho Hur

Case 2 // 65 YO female, STEMI (inf)

Resting onset chest pain for 3hrs

ECG – II III aVF ST elevation

Where is the culprit lesion?

How to treat this lesion?

Case 2 // 65 YO female, STEMI (inf)

Case 2 // 65 YO female, STEMI (inf)

Stent or not?

If Stent, how to determine stent size?

Case 2 // 65 YO female, STEMI (inf)

Case 2 // 65 YO female, STEMI (inf)

Where did thrombus came from ??

Case 2 // 65 YO female, STEMI (inf)

Case 2 // 65 YO female, STEMI (inf)

Aspiration Only without STENT

**Aspirin / Ticagrelor
Atorvastatin 40mg
Nicorandil
Diltiazem**

Case 2 // 65 YO female, STEMI (inf)

Don't Be Dazzled by CAG

OCT was useful...

To find true lesion

To determine pathophysiology

To select proper management

Case 3 // 41 YO Male, NSTEMI

- ▶ 41YO Male
- ▶ Resting Onset Chest Pain
- ▶ Current Smoker
- ▶ Alcoholic intake overnight
- ▶ Troponin-I ; Elevated (0.026 ng/mL)

Case 3 // 41 YO Male, NSTEMI

Case 3 // 41 YO Male, NSTEMI

Case 3 // 41 YO Male, NSTEMI

Pathophysiology of Culprit Lesion

How to treat this lesion ?

How to evaluate therapeutic effect?

When is proper time to FU

Case 3 // 41 YO Male, NSTEMI

FU CAG & OCT after 3days

Case 3 // 41 YO Male, NSTEMI

Aspirin // Ticagrelor

Atorvastatin 40mg

Amlodipine 5mg

Case 3 // 41 YO Male, NSTEMI

FU CAG & OCT after 12 months

Case 3 // 41 YO Male, NSTEMI

FU CAG & OCT after 12 months

Case 3 // 41 YO Male, NSTEMI

Stop Smoking & Alcohol

Atorvastatin 20 mg

Amlodipine 2.5mg

Case 4 / 66YO Female, Ischemic DCM

✓ CKMB/cTnI: 117.8/1.07

✓ NT proBNP: 8618.3 ng/mL

✓ TTE: **EF 15%**, LVDd/s 6.48/5.83, LAD 4.06

Case 4 / 66YO Female, Ischemic DCM

Case 4 / 66YO Female, Ischemic DCM

What is the **mechanism** of this lesion?

How to **treat** this lesion?

surgery or stent?

DES or BMS or Graft Stent

When I need OCT imaging

For BVS evaluation

Case 5. 69 YO male NSTEMI, non-culprit lesion

Courtesy of WJ Jang

Case 5. 69 YO male NSTEMI, non-culprit lesion

Absorb 3.5*23

Case 5. 69 YO male NSTEMI, non-culprit lesion

Absorb 3.5*23

Case 5. 65 YO male NSTEMI, non-culprit lesion

Case 5. 65 YO male NSTEMI, non-culprit lesion

Make The Invisible to Visible...

When I need OCT imaging

Intrastent thrombotic prolapse

Role of OCT in Thrombotic Protrusion

- ❖ OCT shows higher detection rate of TP than IVUS.
- ❖ OCT allows accurate assessment of thrombus

IVUS detected TP $\geq 0.17 \text{ mm}^2$

JH Sohn, SH Hur, HJ Yoon, et al
Int J Cardiovasc Imaging (2015) 31:21–29

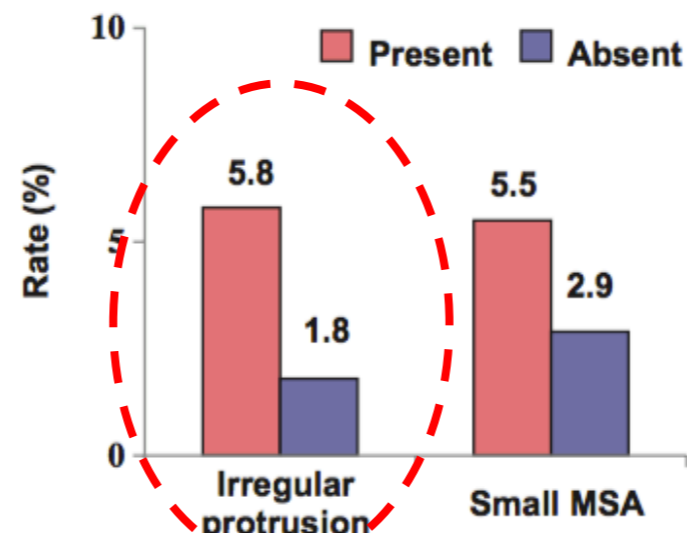

Clinical relevance of Abnormal TP

A Device-oriented clinical endpoint

Odds ratio (95%CI)	2.64 (1.40 – 5.01)	2.54 (1.23 – 5.25)
P-value	0.003	0.012
Sensitivity, %	74.4	59.0
Specificity, %	47.7	59.6
PPV, %	6.5	6.7
NPV, %	97.4	96.7

B Target lesion revascularization

Odds ratio (95%CI)	2.66 (1.40 – 5.05)	2.57 (1.24 – 5.24)
P-value	0.003	0.011
Sensitivity, %	78.8	57.6
Specificity, %	47.7	59.4
PPV, %	5.8	5.5
NPV, %	98.2	97.1

Prediction of early stent thrombosis

OCT can detect very subtle change of TP.

It is angiographically undetected subtle change, but it can be preceding finding of a serious complication.

Summary

- Intravascular optical coherence tomography (OCT) can add diagnostic value to angiography.
- Intravascular OCT has excellent ability in detecting intraluminal thrombus when compared with CAG & IVUS, and it can fulfill angiographic limitations in ambiguous lesions.
- For BRS evaluation, Intravascular OCT is tool of choice.
- Tissue prolapse happens more often in ACS, it can be well detected by OCT.

Disease is very old, and nothing about it has changed.

It is we who changes as we learn to recognize what was formerly imperceptible.

Jean Martin Charcot
