

Patent Foramen Ovale: Pre-procedural Evaluation & Pitfalls of Diagnosis

Jae-Kwan Song, MD, PhD, FACC

Cardiac Imaging Center

Asan Medical Center Heart Institute

University of Ulsan College of Medicine

Seoul, South Korea

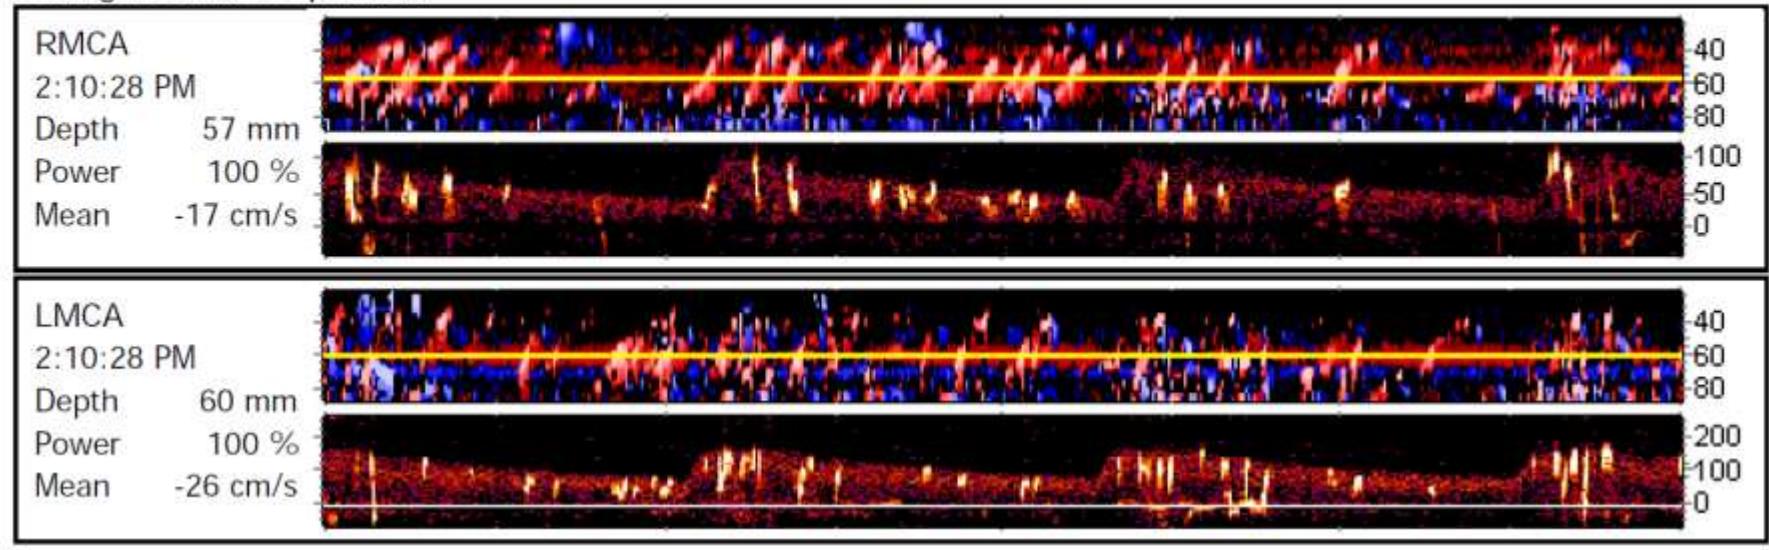

Case Study (1)

- 55/Female, left MCA infarction in Jan 2010

Findings

Embolic tracks counted during normal respiration: 250.

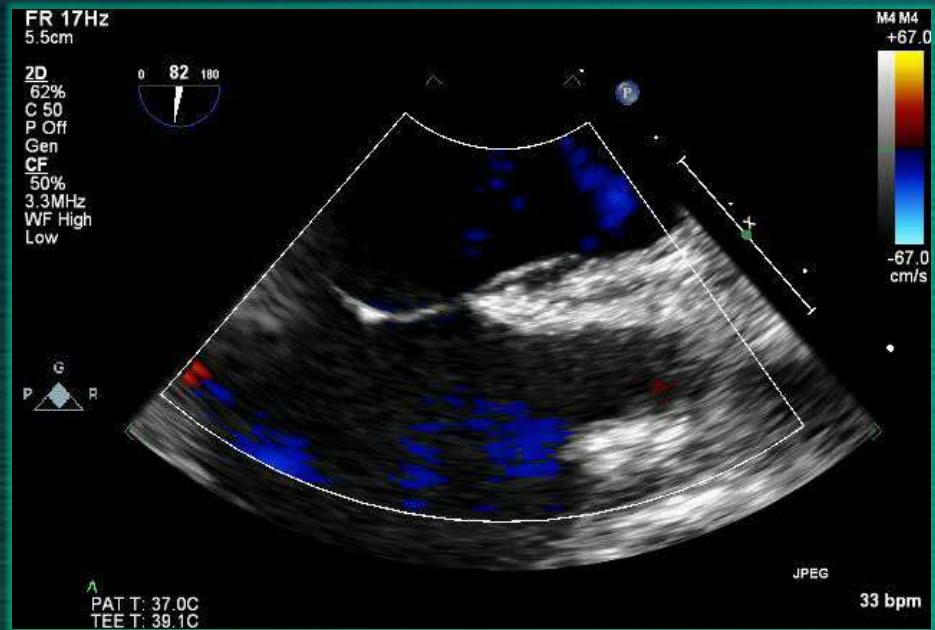

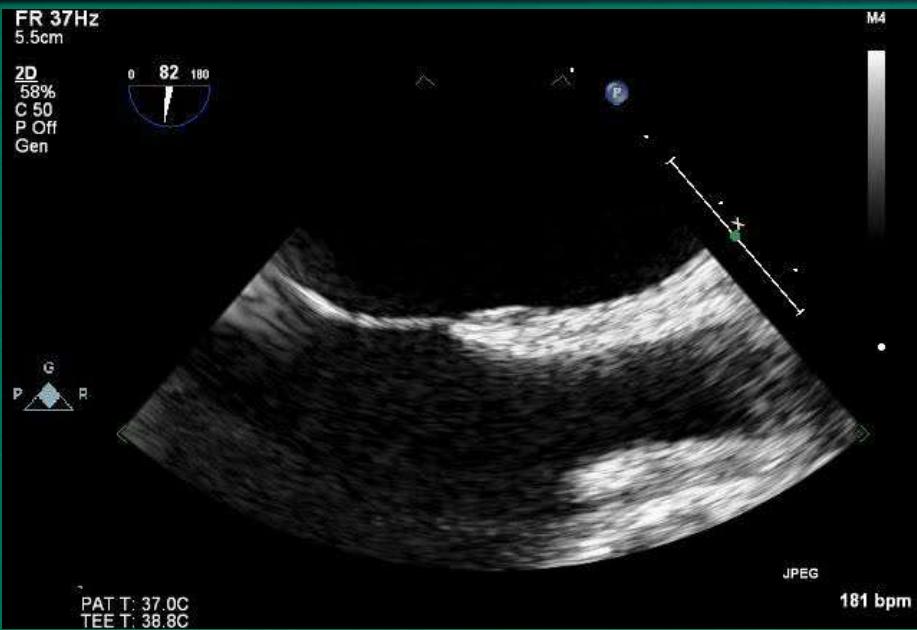

During Normal Respiration

Transcranial Doppler
HITS (high intensity transient signal)

Case Study (1)

- 55/Female, left MCA infarction in Jan 2010

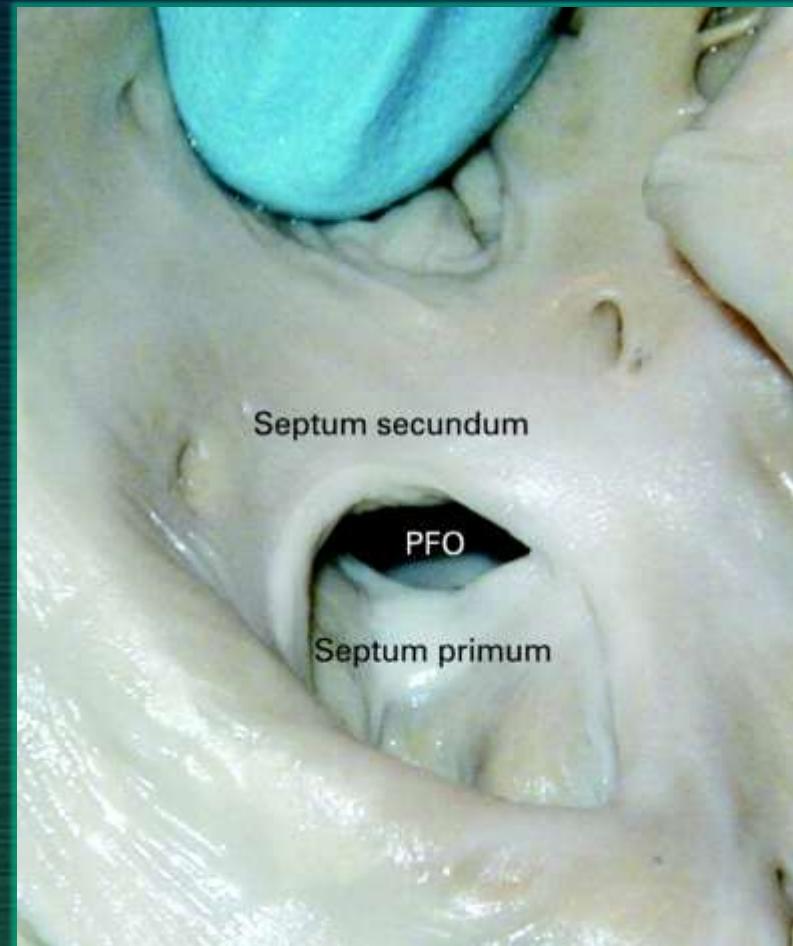

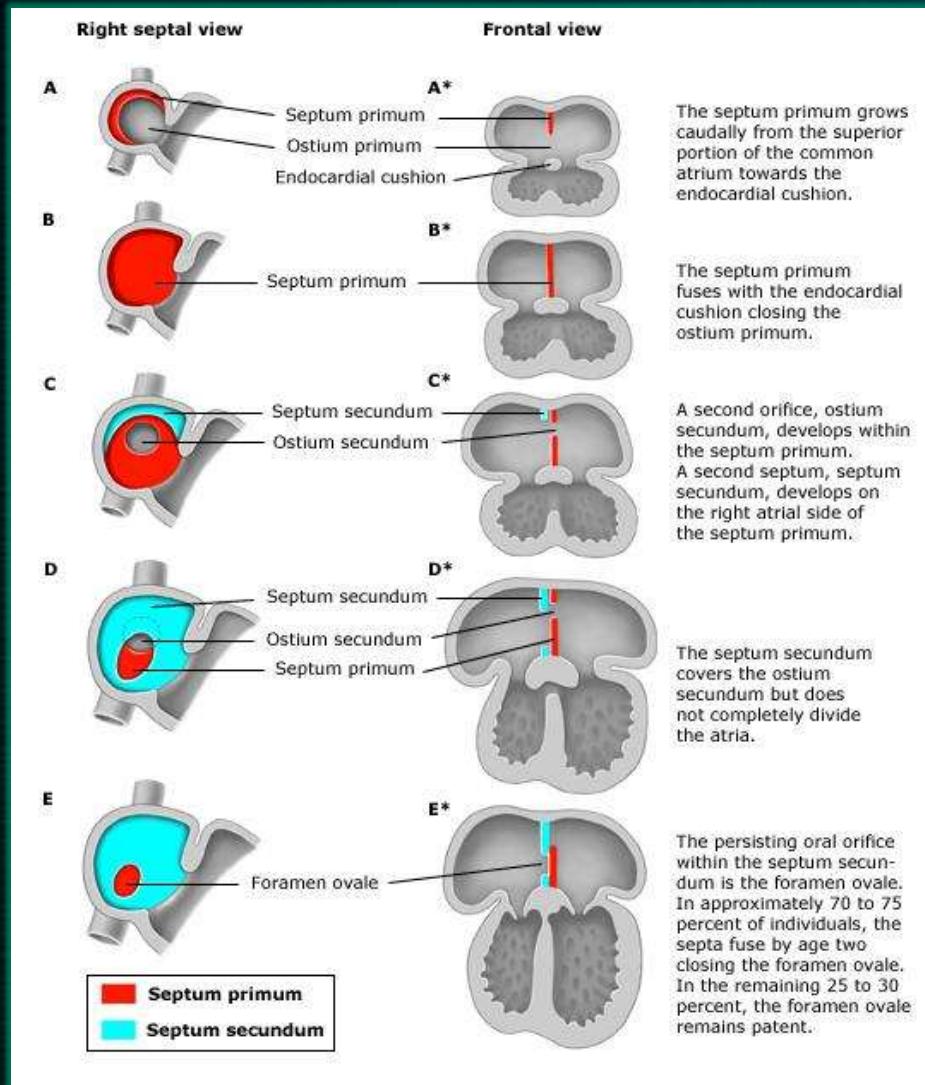

Case Study (1)

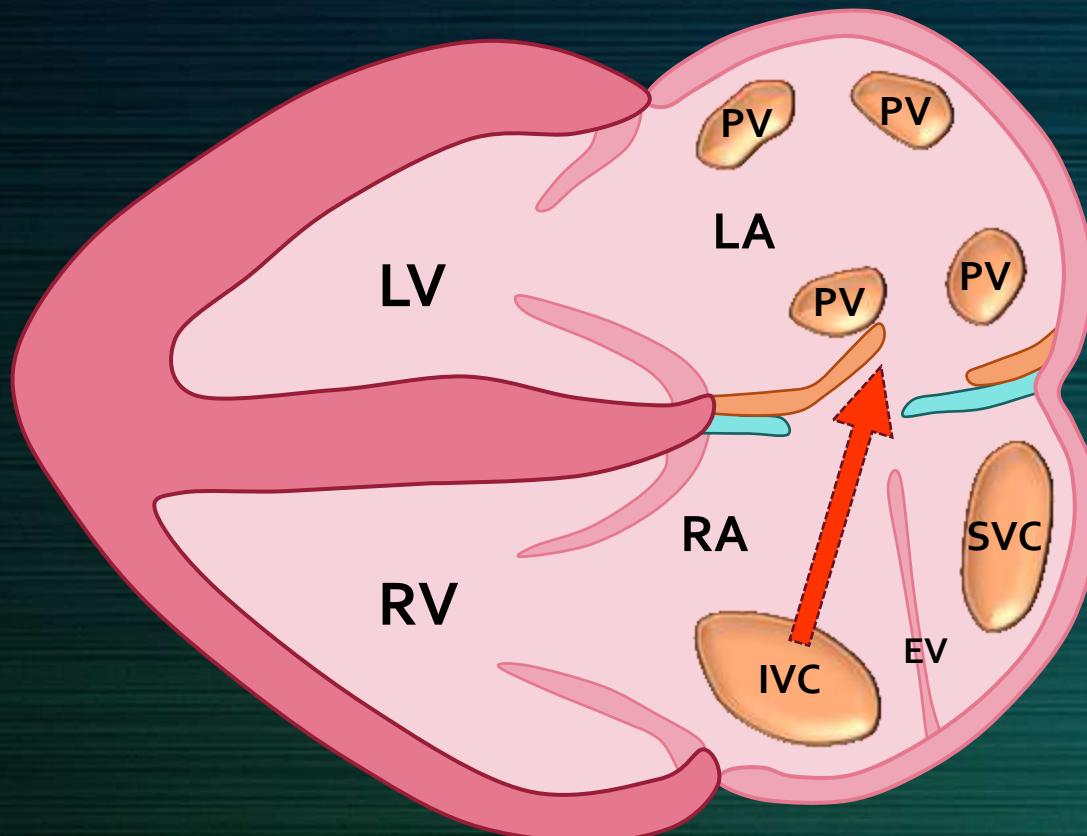

- 1) Normal - observation
- 2) PFO – device closure
- 3) PFO – open heart surgery
- 4) PDA – percutaneous closure
- 5) Needs a further study

PFO with Many Different Features

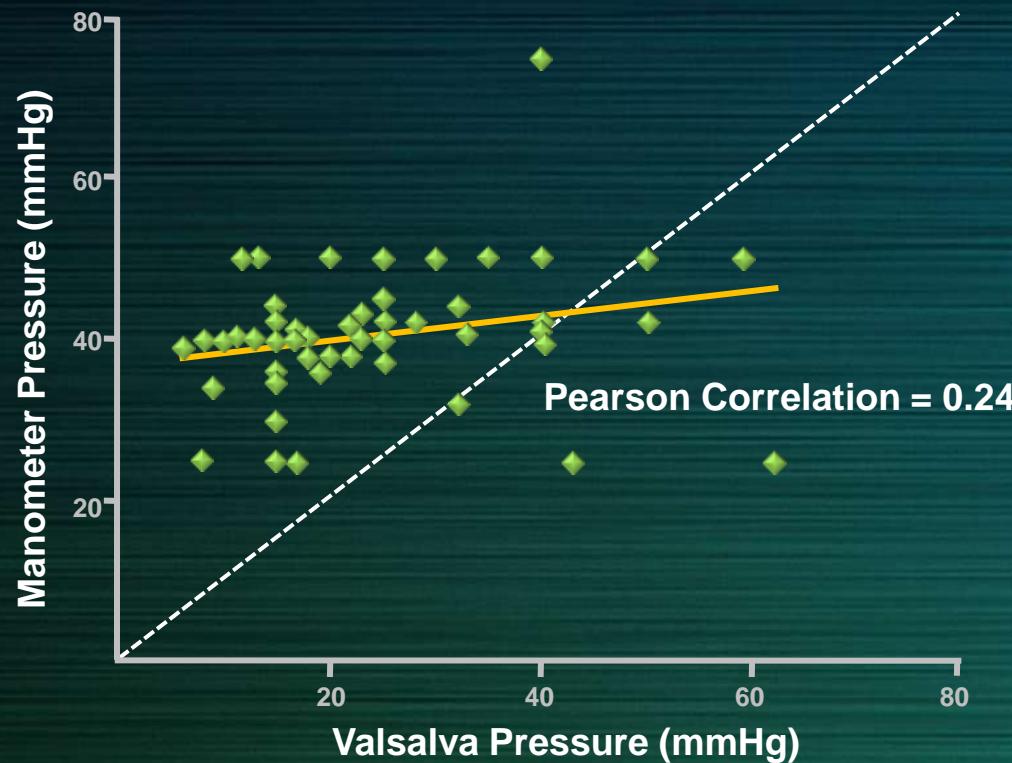

PFO with Many Different Features

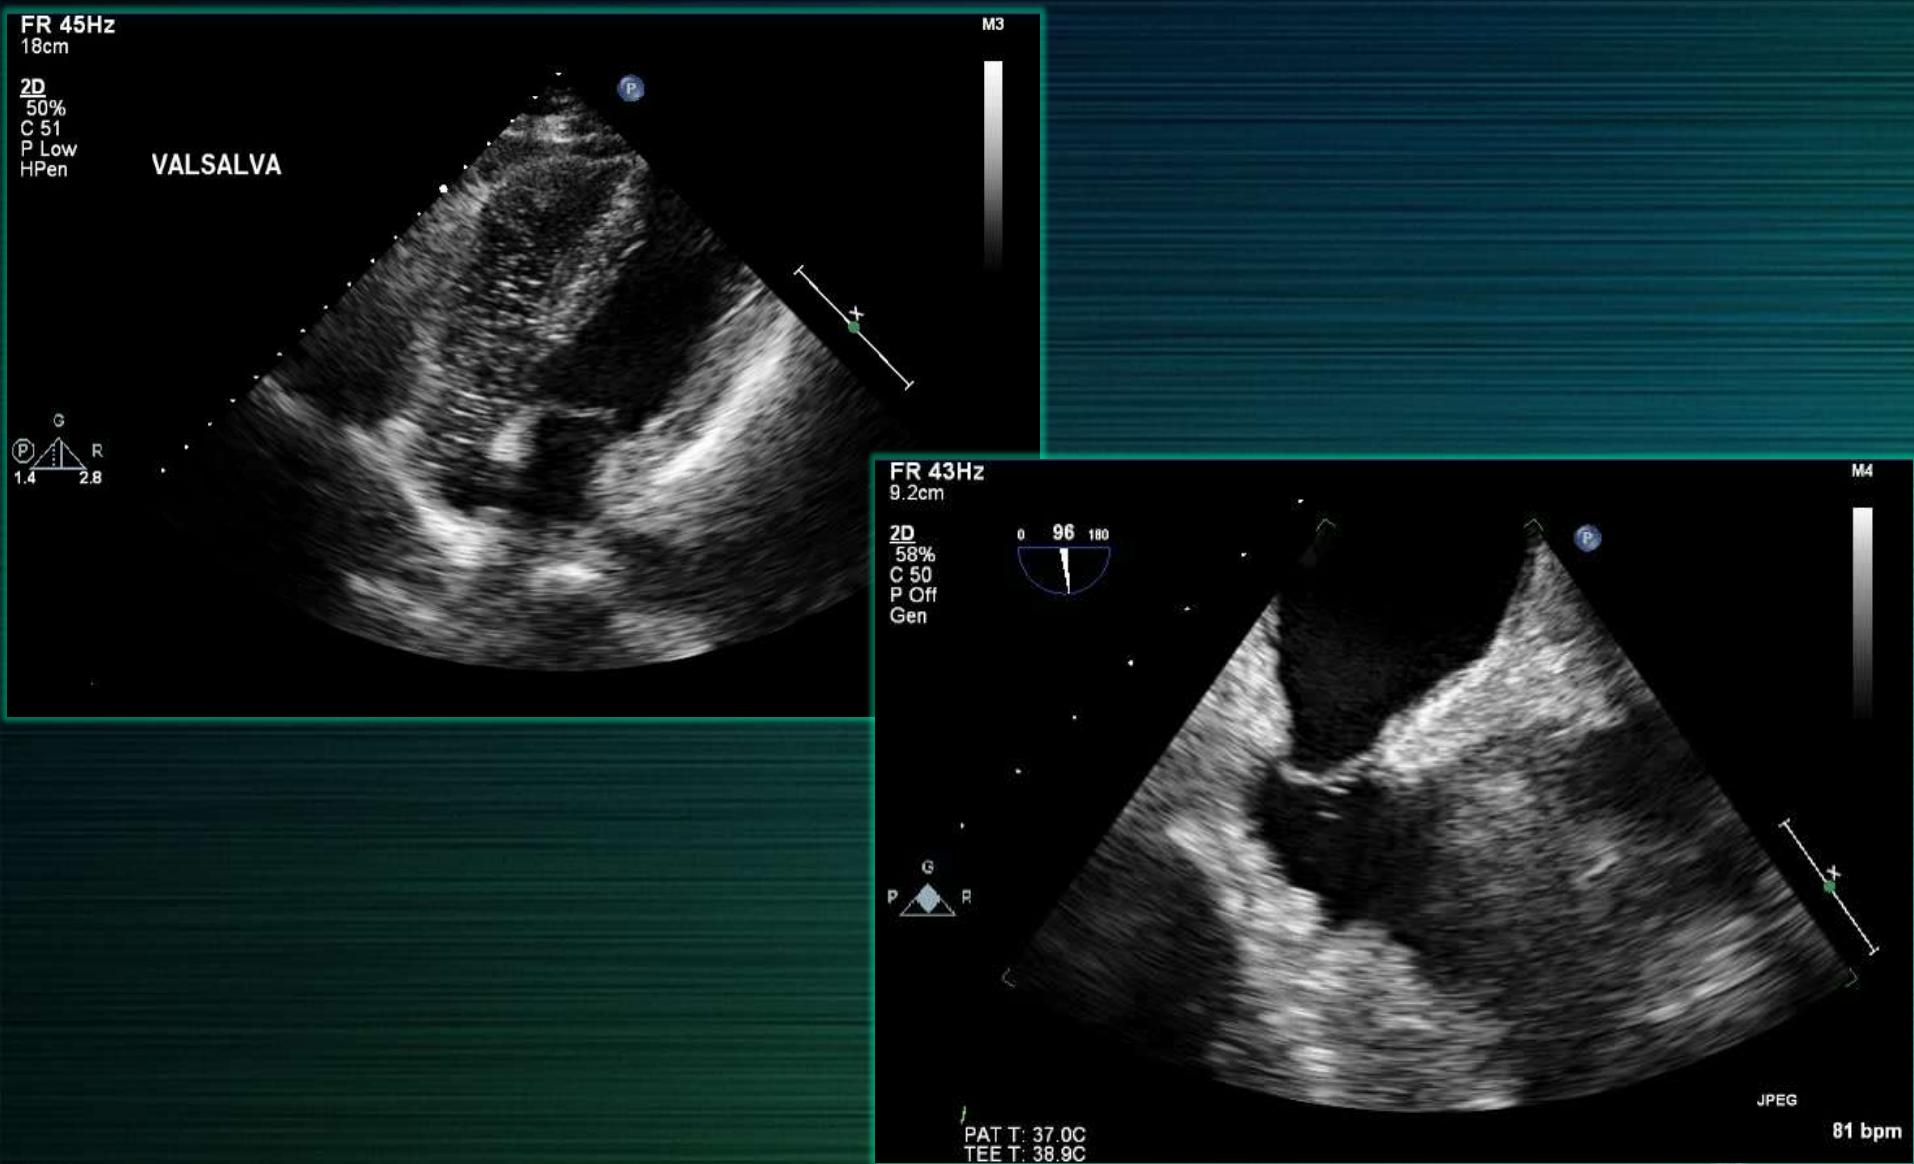

Detection of PFO

Valsalva vs. Manometer

**Comparison of right atrial pressure
measured during Valsalva maneuver vs. Manometer**

TTE vs. TEE: Why TEE?

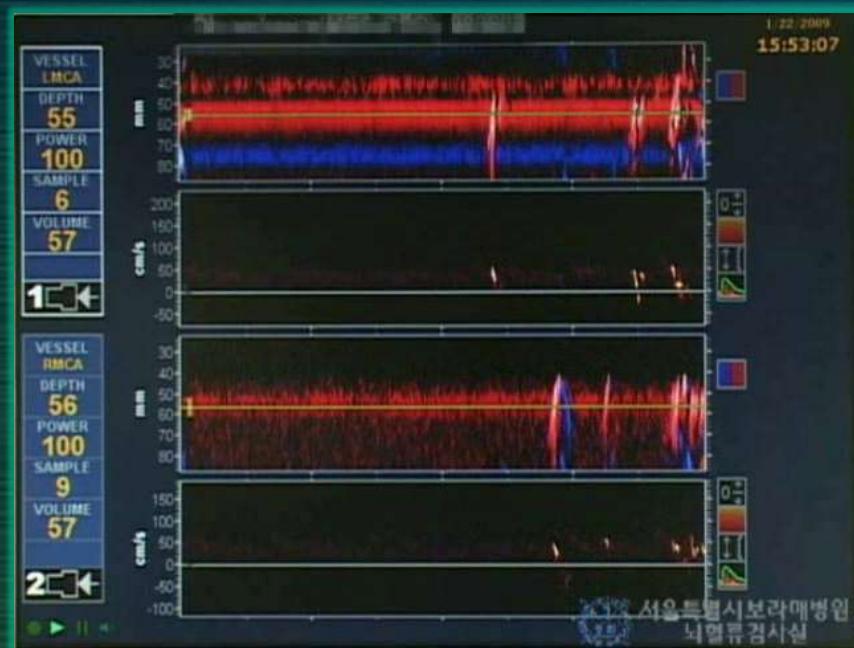

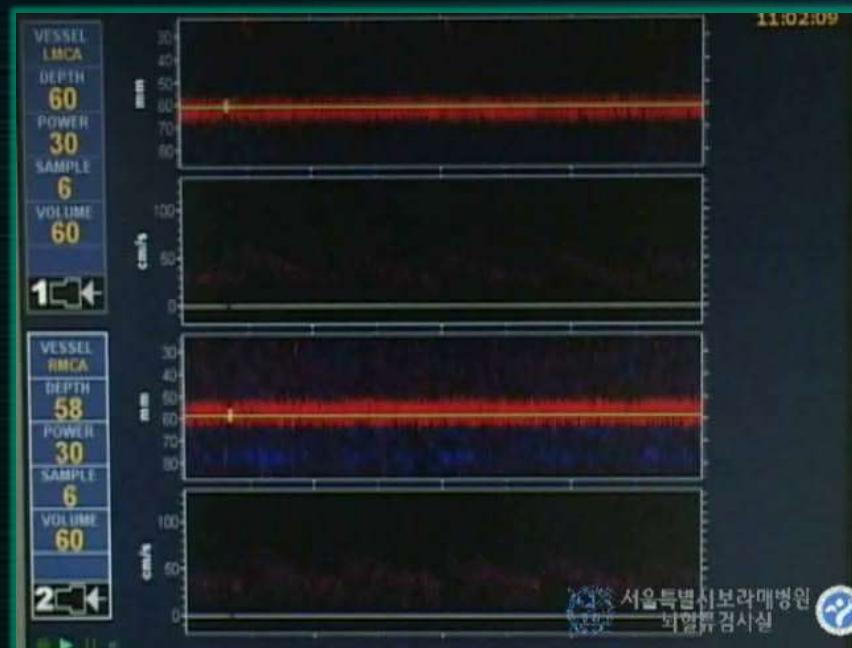

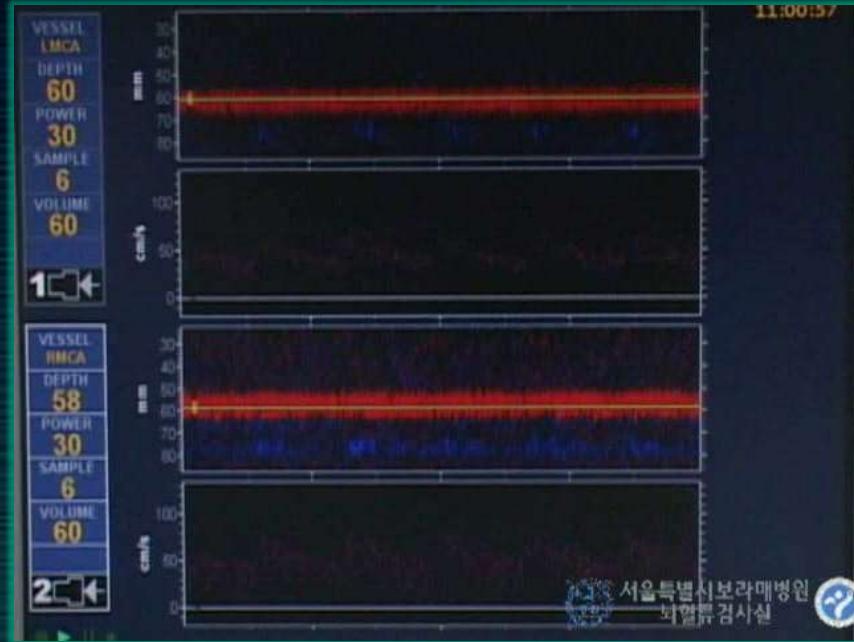

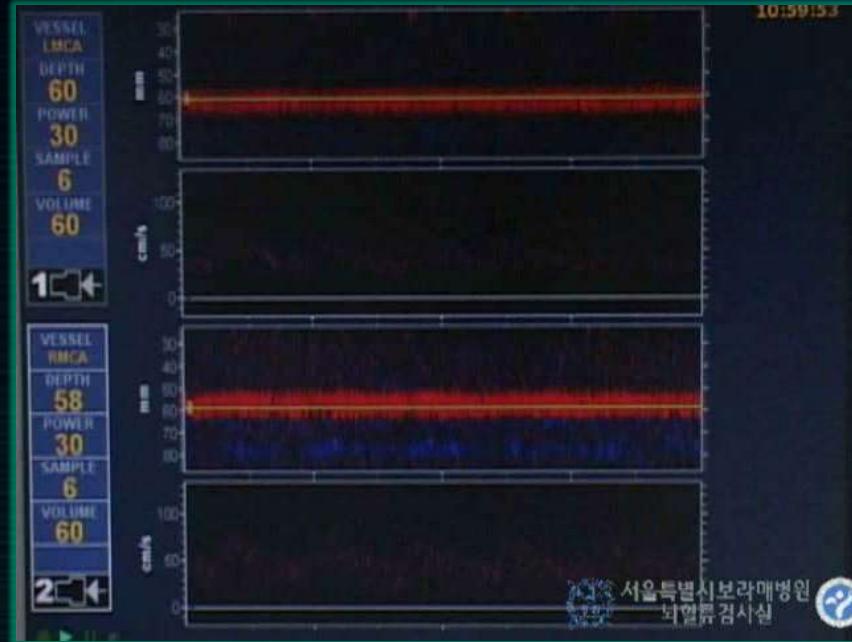

Detection of PFO: Why TEE?

Transcranial Doppler

- Detection of ***microbubble in the cerebral circulation***
- Does not necessarily imply the presence of PFO
- TCD ***cannot identify the site of R-L shunt***

Antecubital + Valsalva	18/13.6
Femoral	38.6/36
Femoral + Valsalva	50/50

Risk Stratification Based on PFO Phenotype

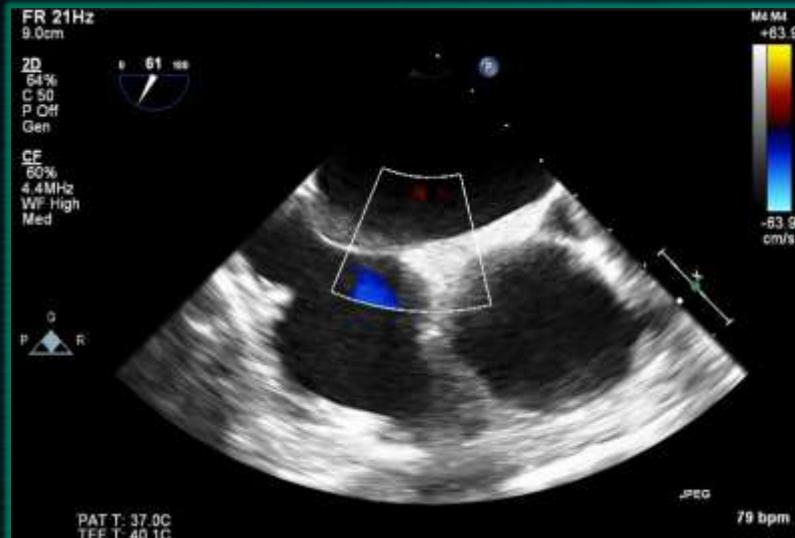

PFO Phenotype: Low Risk

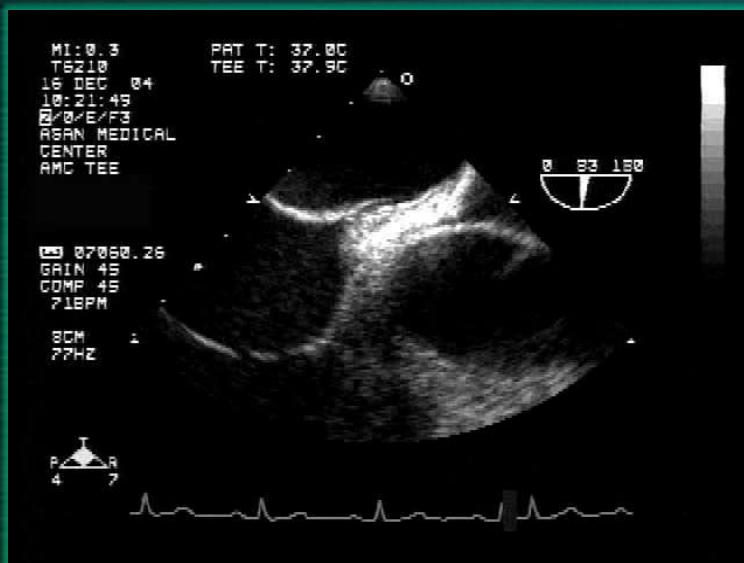

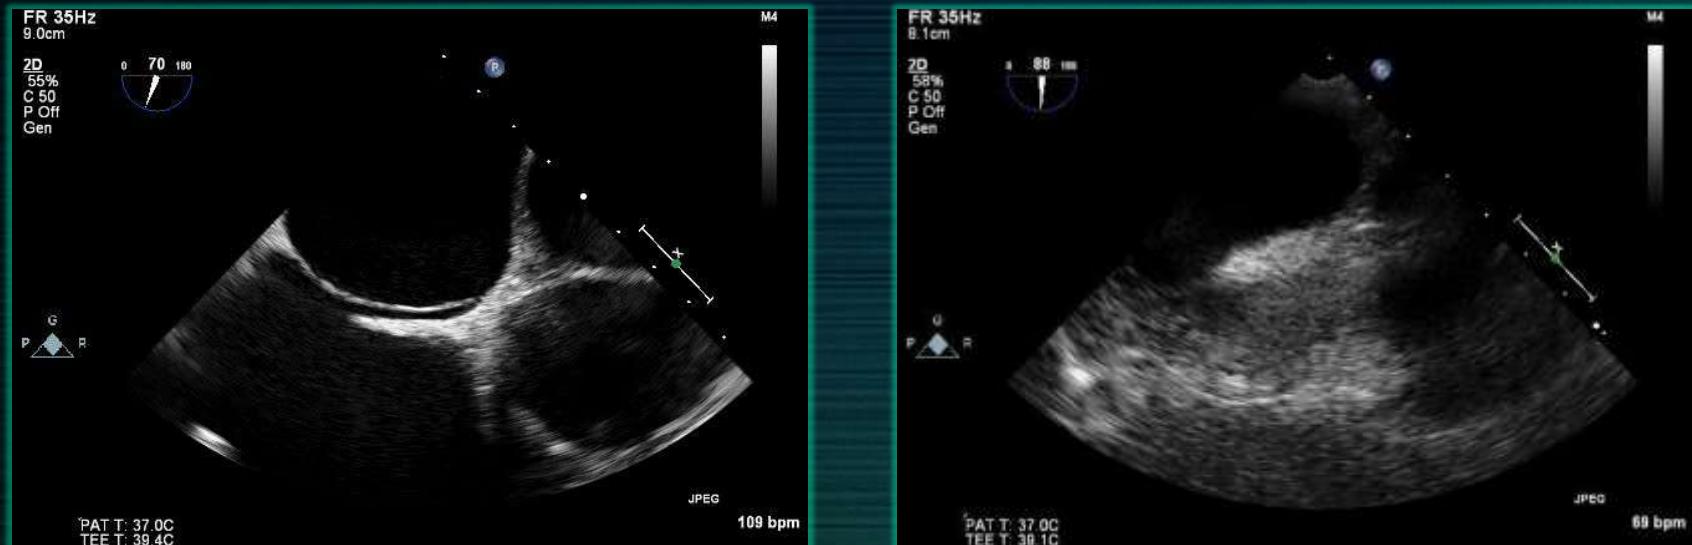

PFO Phenotype: Low Risk

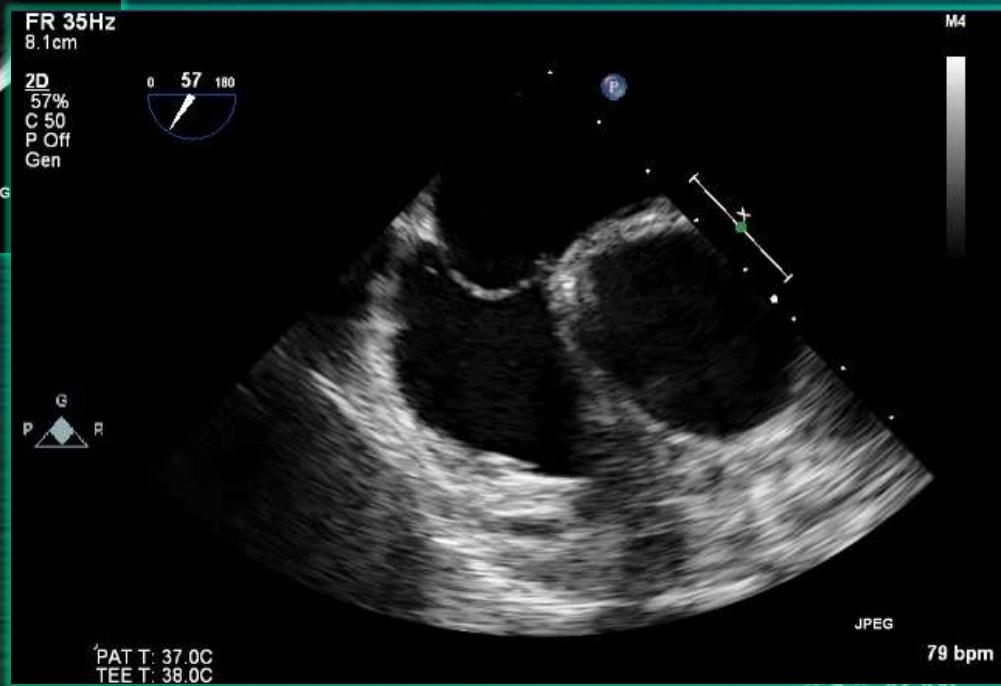

PFO Phenotype: Low Risk

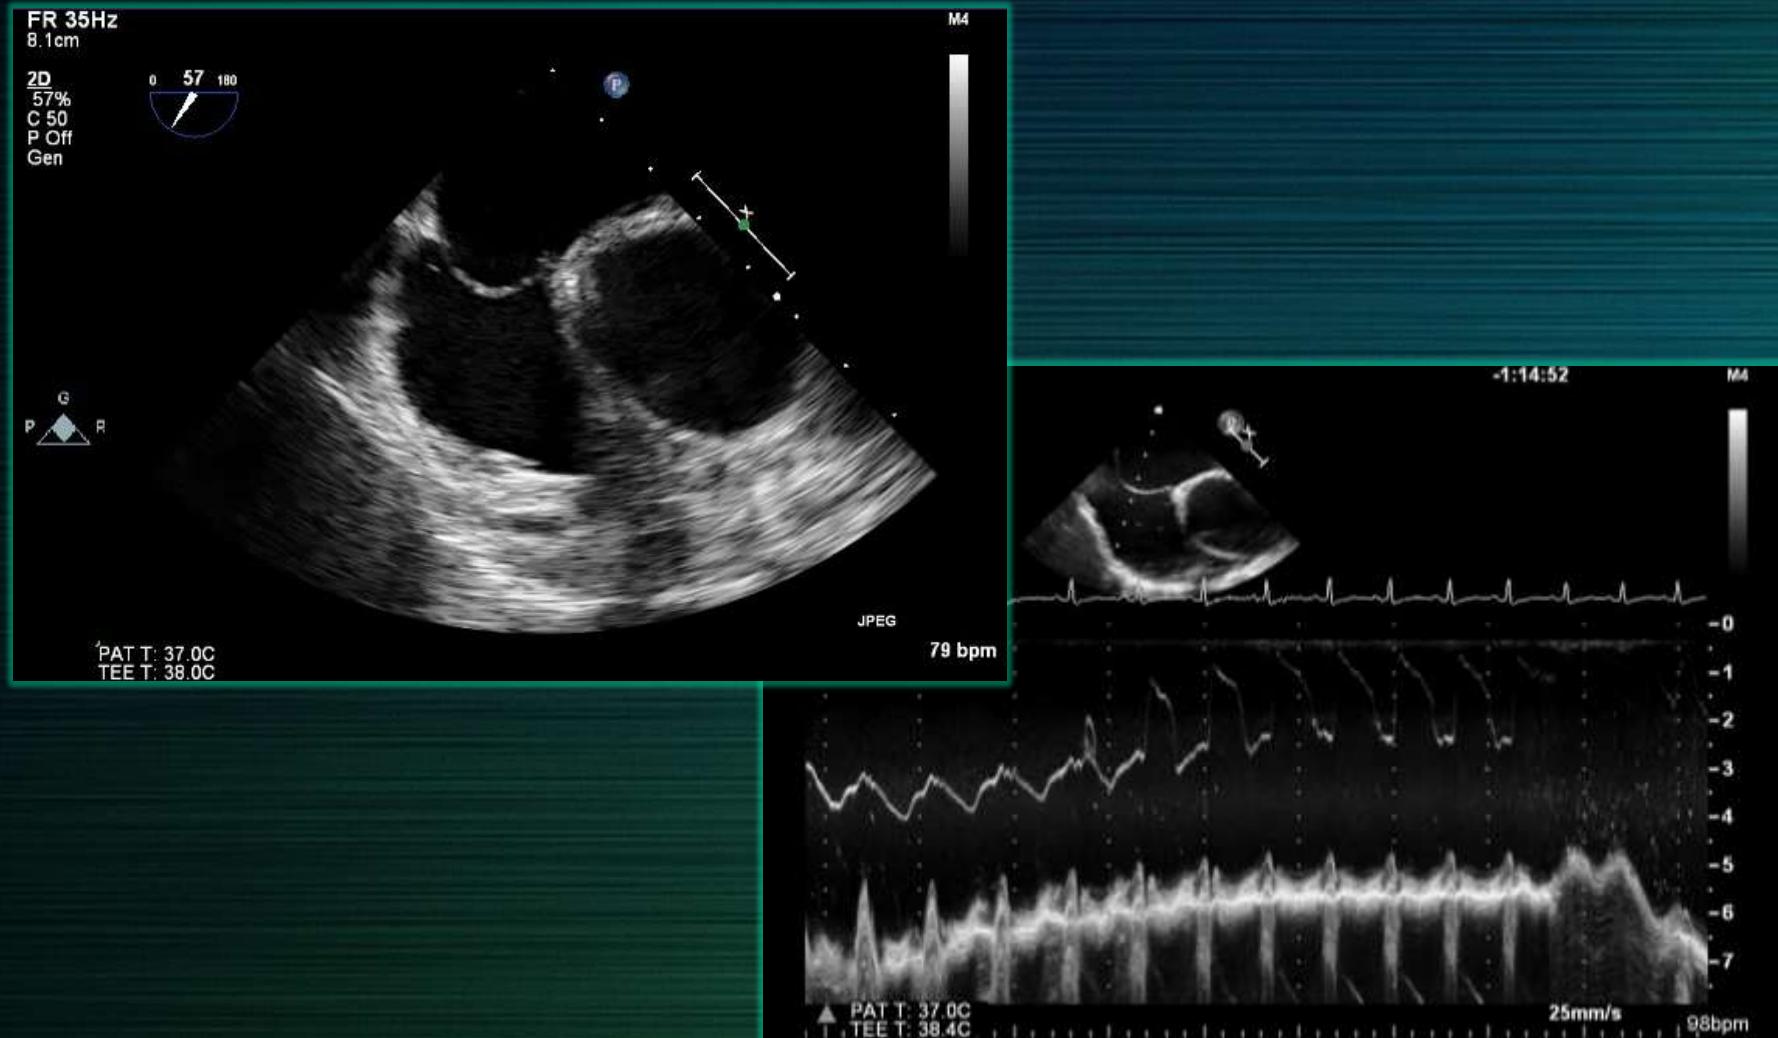

PFO Phenotype: *High Risk (Large Shunt)*

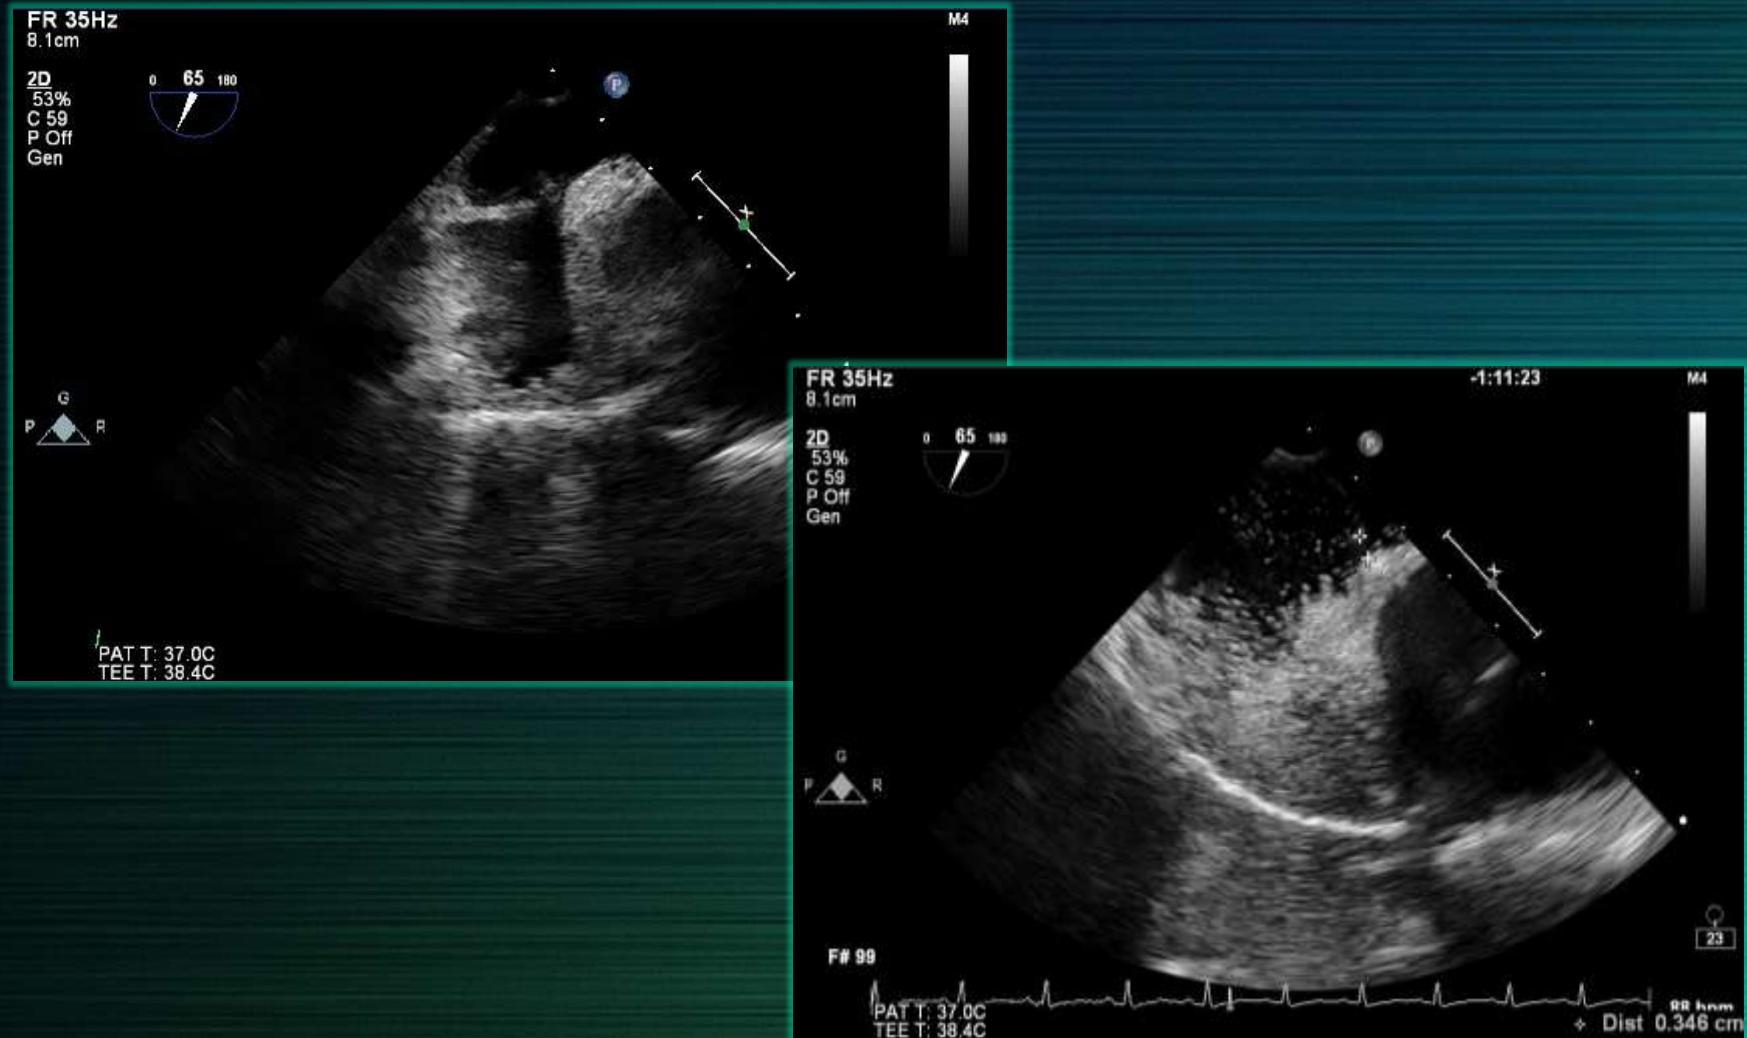

PFO Phenotype: *High Risk (Hypermobile Septum)*

PFO Phenotype: *High Risk (Hypermobile Septum)*

PFO Phenotype: *High Risk*

DEvice Closure versus Medical Therapy For SEcoNdary Prevention in Cryptogenic StrokE Patients with High-Risk Patent Foramen Ovale: *DEFENSE-PFO trial*

- A prospective, two arms, single blinded, randomized multi-center trial
- High-risk PFO: PFO ≥ 2 mm, ASA or atrial septal hypermobility
- Primary outcome: stroke recurrence, vascular death, bleeding
- MRI imaging F/U

DEFENSE-PFO

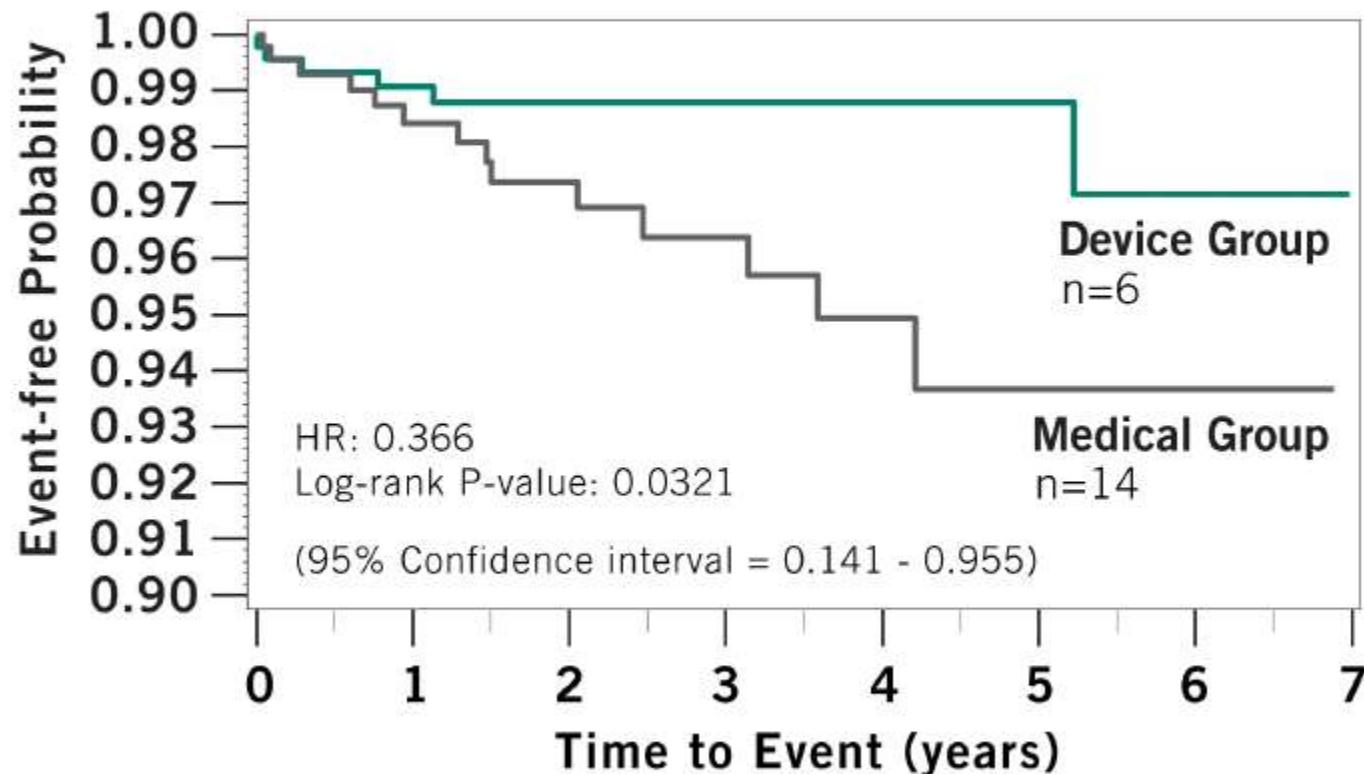

Cryptogenic Stroke Patient with
High-risk Patent Foramen Ovale
(PFO size by TEE ≥ 2 mm or
Atrial Septal Hypermobility/Aneurysm)

PFO device closure
(Amplatzer Device)

Standard
Medical Treatment

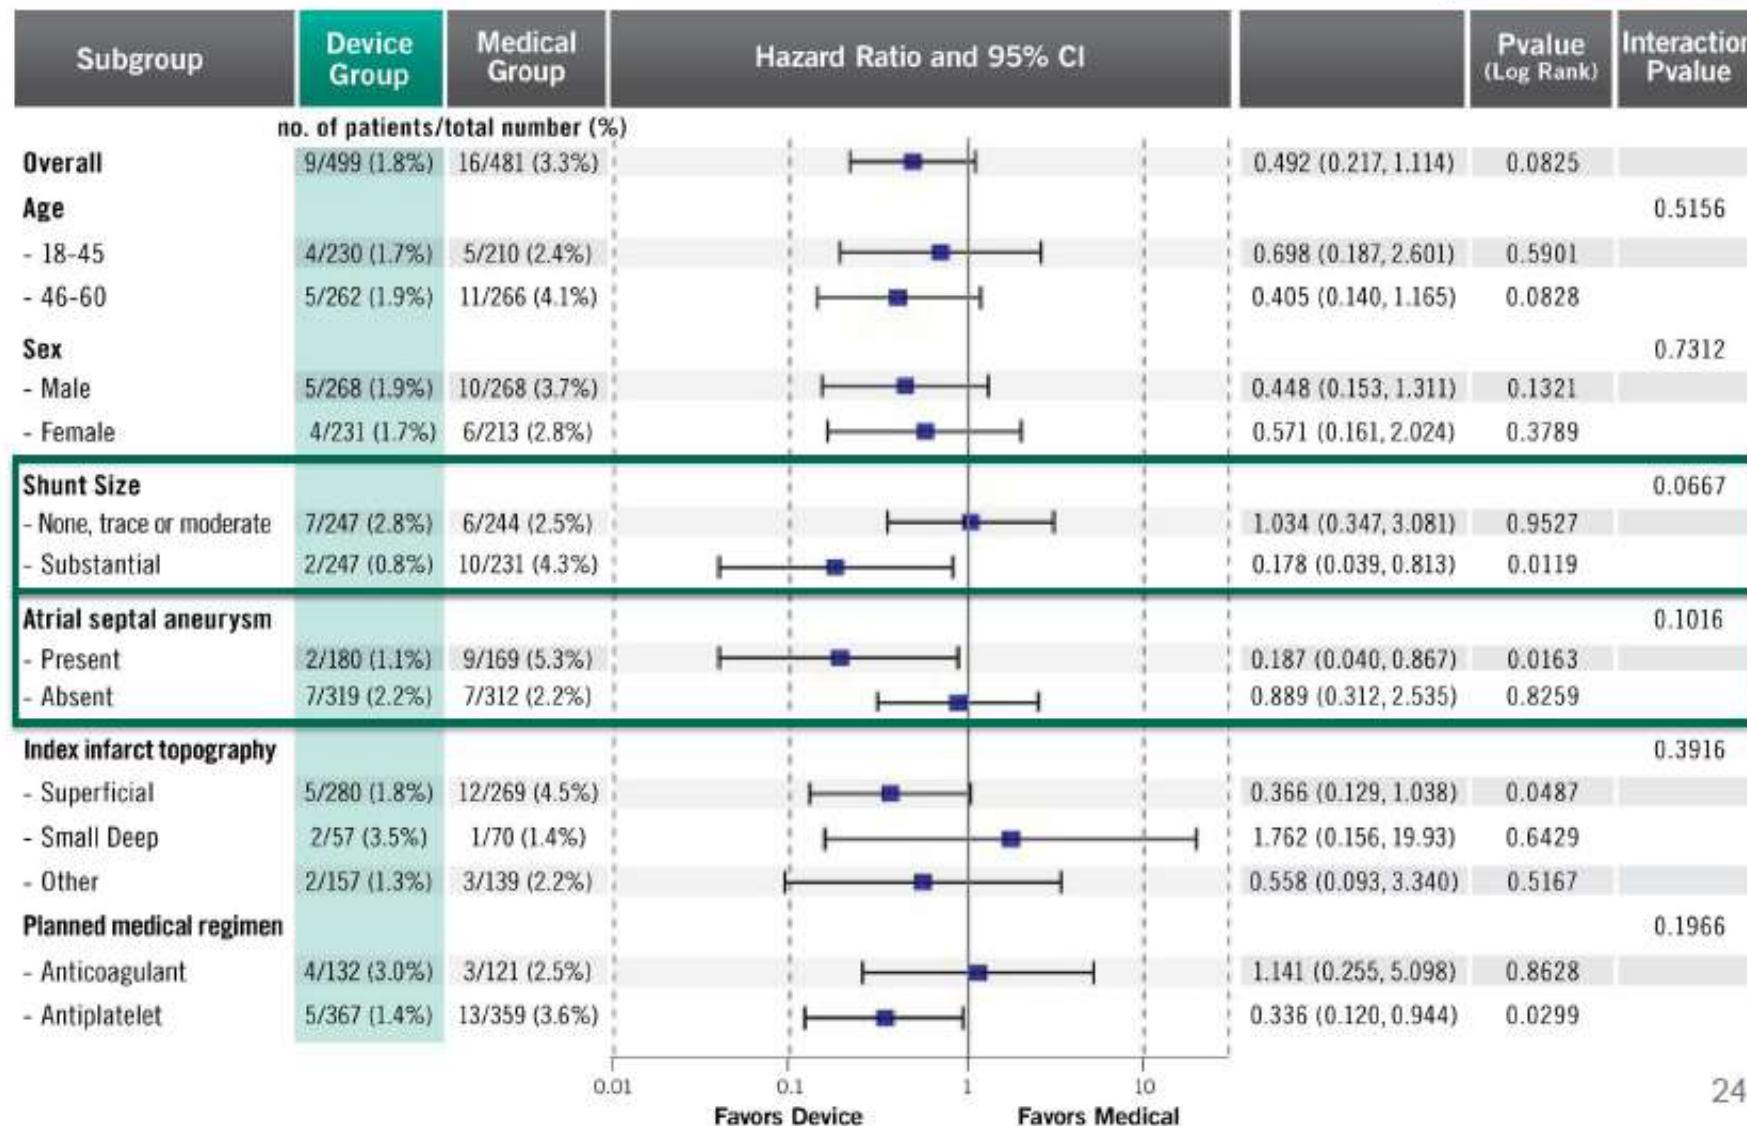

- Recurrent event rate: device group (4%) vs. medical group (15%)
- Statistical power of 80% and attrition rate of 10%
- Each group should have 105 patients.

Primary Endpoint Analysis – Per Protocol Cohort 63.4% risk reduction of stroke in favor of device

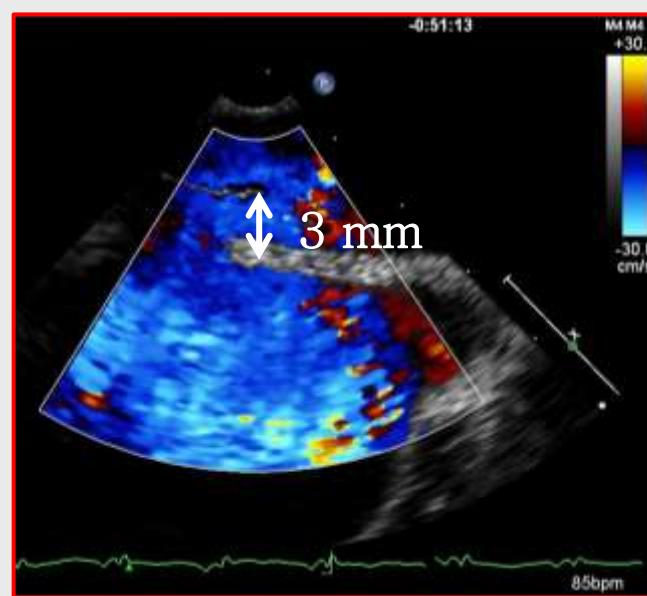

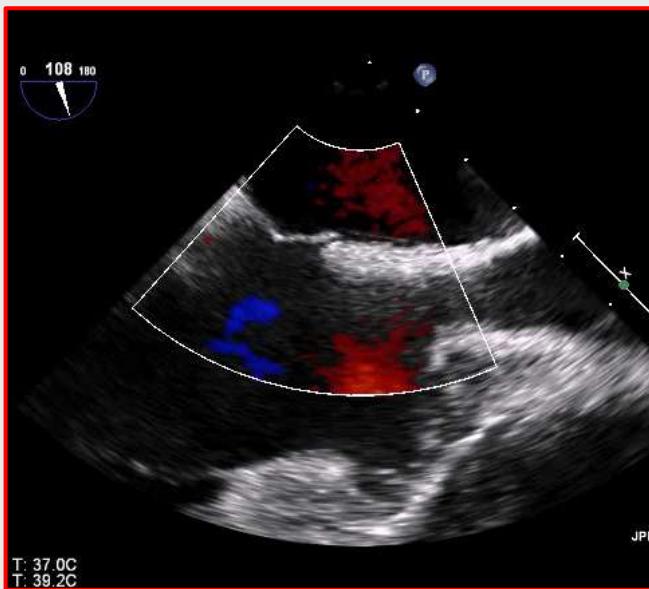

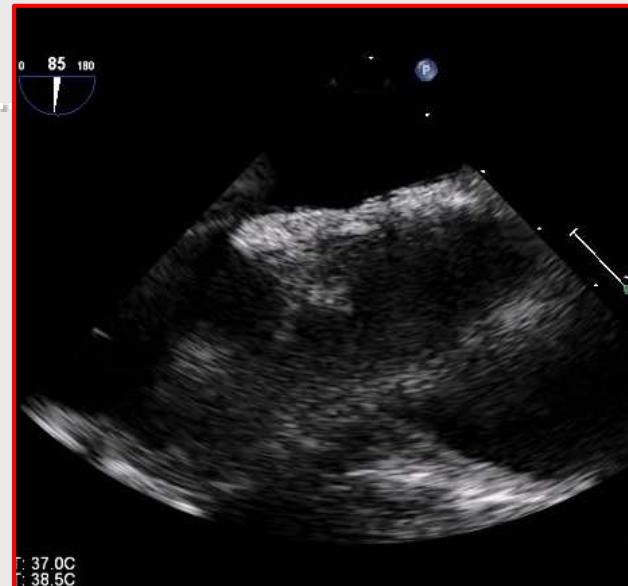

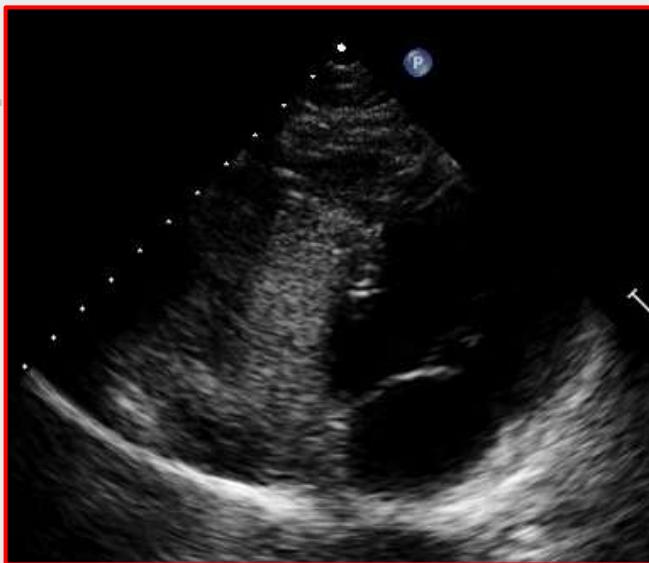

- The Per Protocol (PP) cohort includes patients who adhered to the requirements of the study protocol

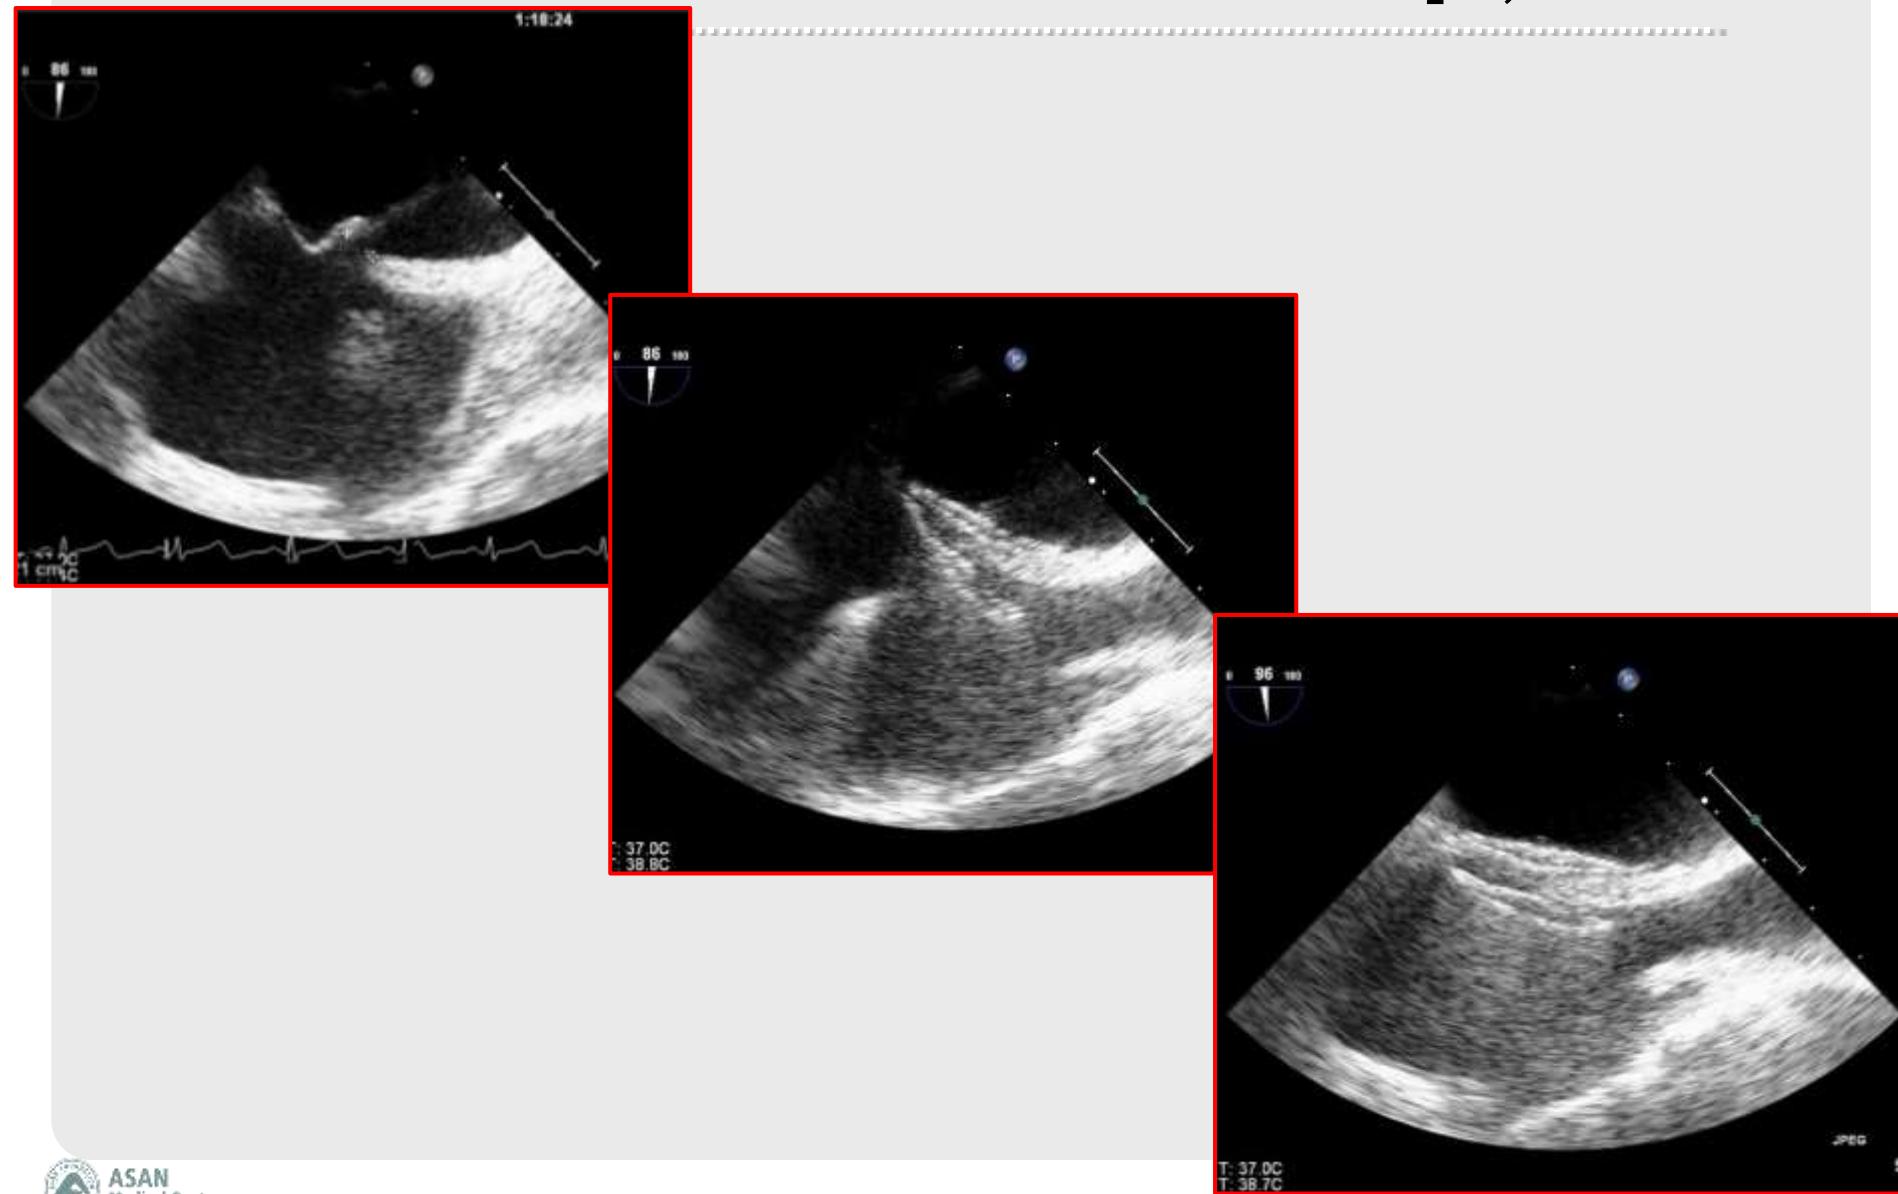

Subpopulation Differential Treatment Effect

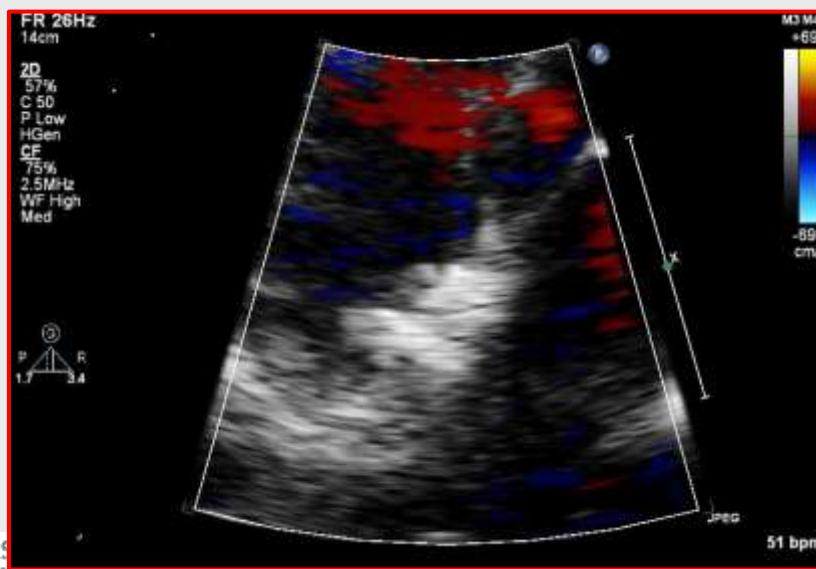

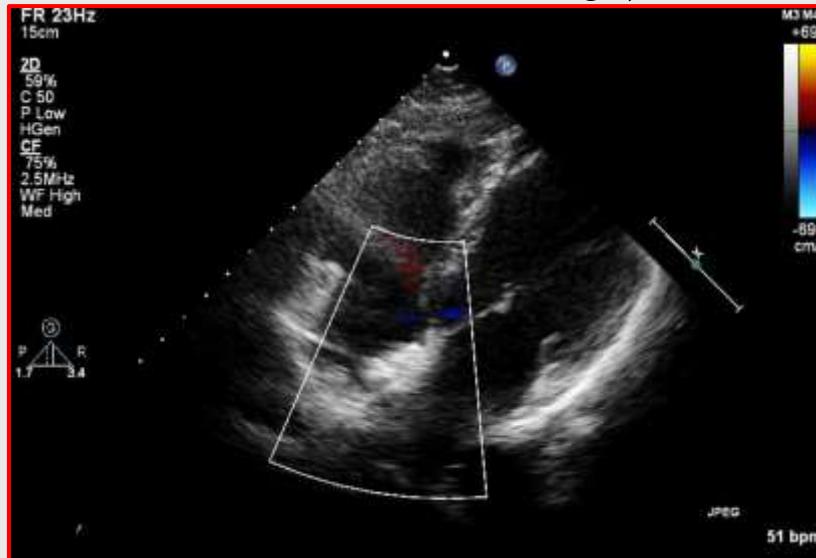

- 38/F, cryptogenic stroke in 2010

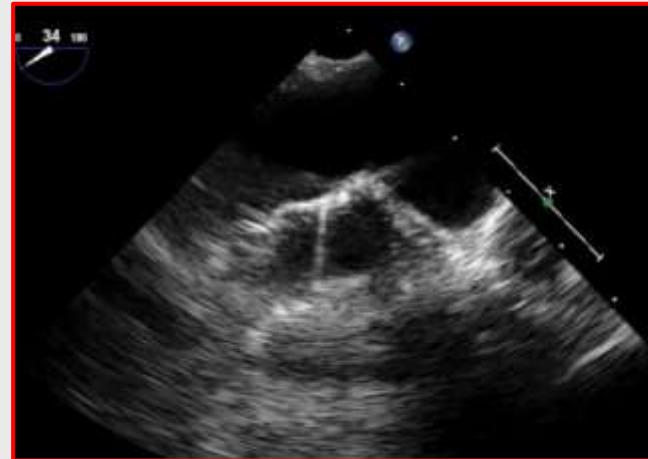

- 38/F, cryptogenic stroke in Feb, 2010
- Underwent PFO device closure in Apr, 2010

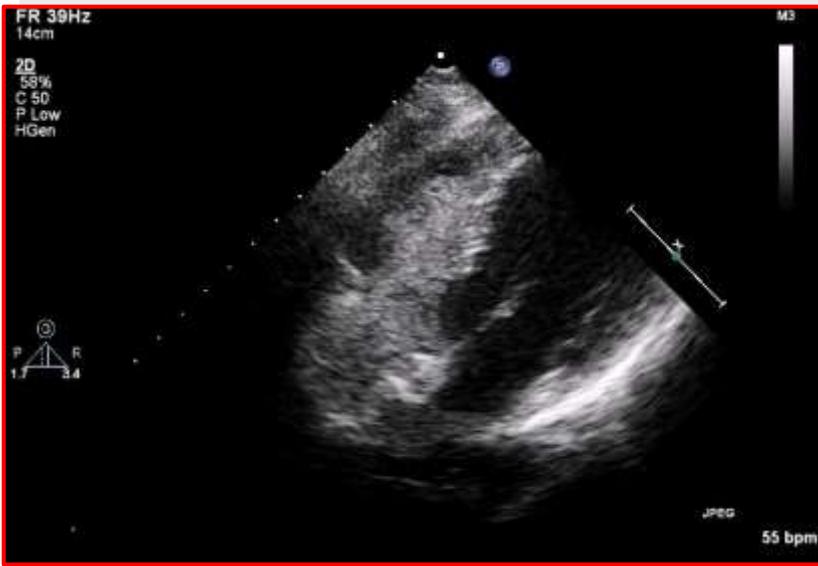

- 38/F, cryptogenic stroke in Feb, 2010
- Underwent PFO device closure in Apr, 2010
- F/U echo in May, 2013

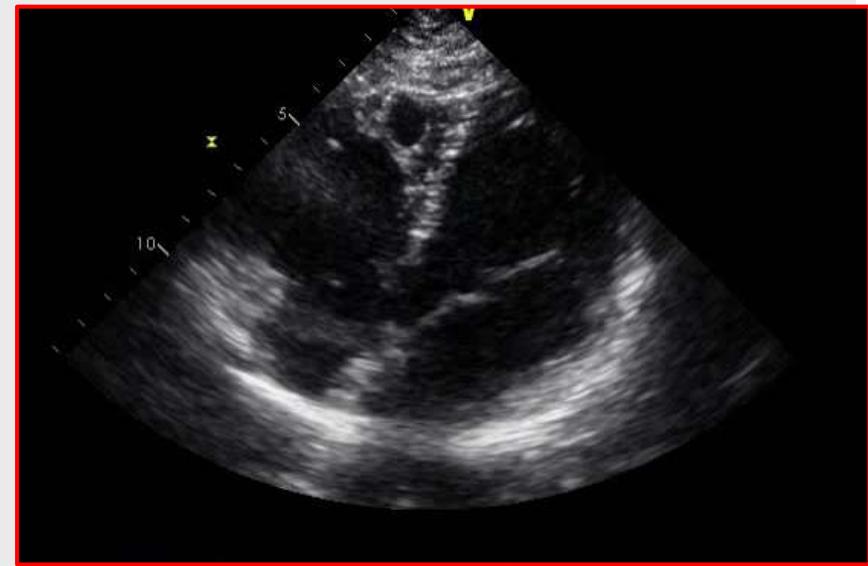

- 38/F, cryptogenic stroke in Feb, 2010
- Underwent PFO device closure in Apr, 2010
- F/U echo in May, 2013

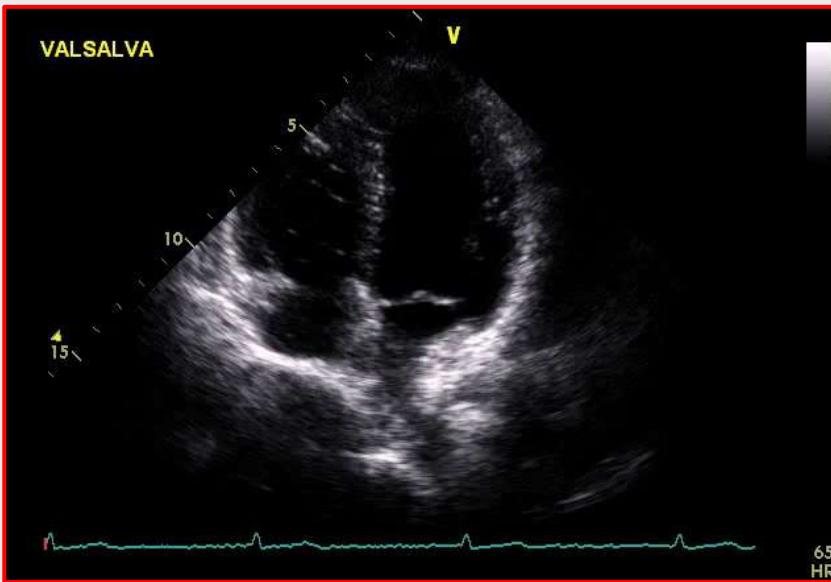

- 38/F, cryptogenic stroke in Feb, 2010
- Underwent PFO device closure in Apr, 2010
- F/U echo in May, 2013
- Closure of pulm AV malformation in Oct 2014

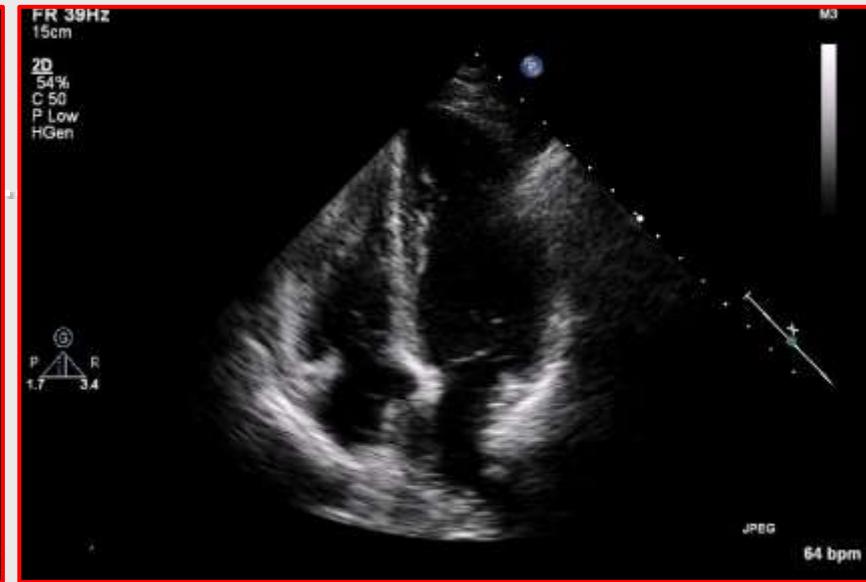

After PFO device closure

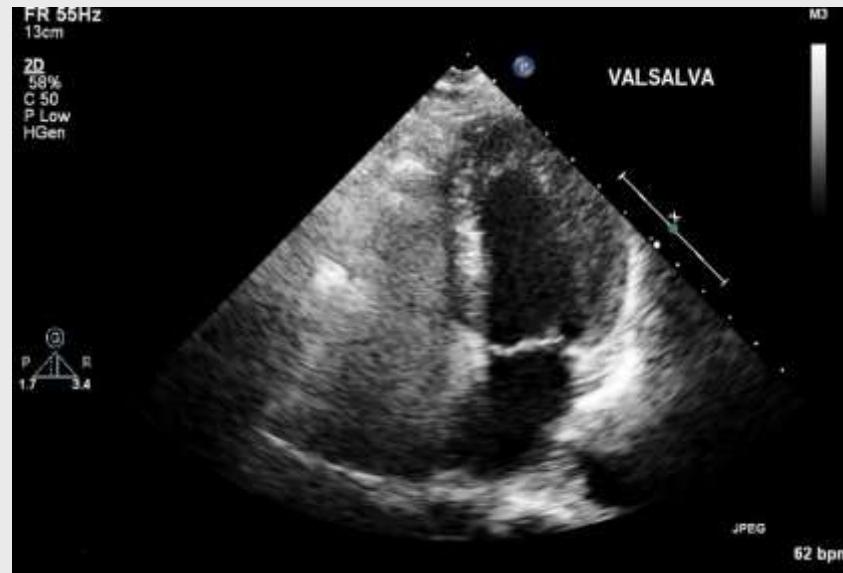

After closure of pulm AV malformation

Before PFO closure

Immediately after device closure

1 year later

PFO: To Close or Not To

- PFO diagnosis is not easy!
- Team approach (neurologists, cardiac image specialists and interventionists) is necessary for clinical decision making for secondary prevention
- Risk stratification based on PFO phenotype?
