

**OCT guided PCI a first choice
for patients with high SYNTAX score.**

**Sozykin A.V., Ertman V.G.,
Shlykov A.V., Nikitin A.E.,
Novikova N.A.**

- Female, 63 y.o. CAD.
- Angina on minimal exertion and rest.
- STEMI 1 month ago (by CA acute occlusion RCA/one BMS, LM two stenosis 90% in ostium & 70% in terminal part, LAD chronic occlusion in the middle, LCX ostium stenosis 70%).
- Hypertension. Diabetes. Dyslipidemia type 2b, GFR 77.11 ml / min / 1.73 m².

- ECHO 1 month ago - hypokinesia, basal lower, partially posterior, middle & lower LV segments. . MR 2st. TR 1st. Dilatation of the LA. EF 56%
- Medications: DAPT, statins, hypotensive drugs, beta-blockers.

Risk calculations for PCI and CABG

The cumulative MACCE rate is displayed for the SYNTAX Trial group this score corresponds to.

SYNTAX Score I

Lesion 1

(segment 5): 5x2=	10
Bifurcation Type: Medina 1,1,1:	2
Aorto Ostial lesion	1
Sub total lesion 1	13

Lesion 2

segment number(s)	12.5
(segment 7): 2.5x5=	1
Age T.O. is unknown	0
the first segment beyond the T.O. visualized by contrast: 7	1
+ sidebranch: Yes, all sidebranches <1.5mm	14.5
Sub total lesion 2	14.5

TOTAL: 27.5

SYNTAX Score II

SYNTAX II

Decision making -between CABG and PCI- guided by the SYNTAX Score II to be endorsed by the Heart Team.

PCI

SYNTAX Score II: 31.3
 PCI 4 Year Mortality: 7.5 % **31.3**
7.5%

CABG

SYNTAX Score II: 21.7
 CABG 4 Year Mortality: 3.4 % **21.7**
3.4%

Treatment recommendation ⓘ: CABG

CABG

Discussion Points

- CABG
- PCI only LM – LCX
- Recanalization LAD and PCI LM (provisional stent)

- We choice OCT guided PCI (radial access, EBU 3.5SH 6F, two wire, recanalisation LAD, predilatation LM and LAD, provisional stenting, with OCT control).
- We opened the LAD and installed 1 ZDES, the n performed a provisional stent LM and LAD 1ZDES with POT, did kissing and POT again, by OCT control of the LM, LAD and LCX.

Measurements

A Area:	14.28mm ²
Mean Diameter:	4.26mm
Min:	3.94mm
Max:	4.52mm

This figure shows the same OCT pullback image as the left panel, but with a software interface overlay. The interface includes a 'Measurements' panel on the left with the following data: A Area: 14.28mm², Mean Diameter: 4.26mm, Min: 3.94mm, and Max: 4.52mm. The interface also features a 'Menu' bar at the bottom with options for 'LAD Prox', 'Past-PCI', and 'End Review', along with navigation controls and a 'start' button.

Conclusion/Take-home Message

- Using of OCT in high-risk patients for PCI allows to performing coronary interventions with high efficiency comparable to surgery.
- The decision on the method of revascularization should be taken by a heart team, taking into account the recommendations, calculating risks and individual patient characteristics.
- Need as a necessarily to use these modern methods of intravascular imaging to help us and our patients come to the best decision for them.
