

Complex PCI 2022

My first OCT guided PCI for STEMI as a Junior

Dr Raymond Cheung
Tuen Mun Hospital, Hong Kong, China

I have nothing to disclose

Vent rate: 81 BPM
PR int: 154 ms
QRS dur: 102 ms
QT/QTc: 371/409 ms
P-R-T axes: 57 29 71

SINUS RHYTHM
SEPTAL MYOCARDIAL INFARCTION (40+ ms Q WAVE IN V1/V2), POSSIBLY ACUTE
MARKED ST ELEVATION, CONSIDER ANTERIOR INJURY (MARKED ST ELEVATION W/O NORMALLY INFLECTED T WAVE IN V2-V5)
ACUTE MI
INTERPRETATION BASED ON A DEFAULT AGE OF 40 YEARS

UNCONFIRMED REPORT

27-Jul-2022 01:16:11 4

68/M
chest pain

Diagnostic Coro

Pre-PCI OCT

Setup Pullback Image quality Co-registration

Purge Catheter and Connect

System will continue once imaging catheter is connected

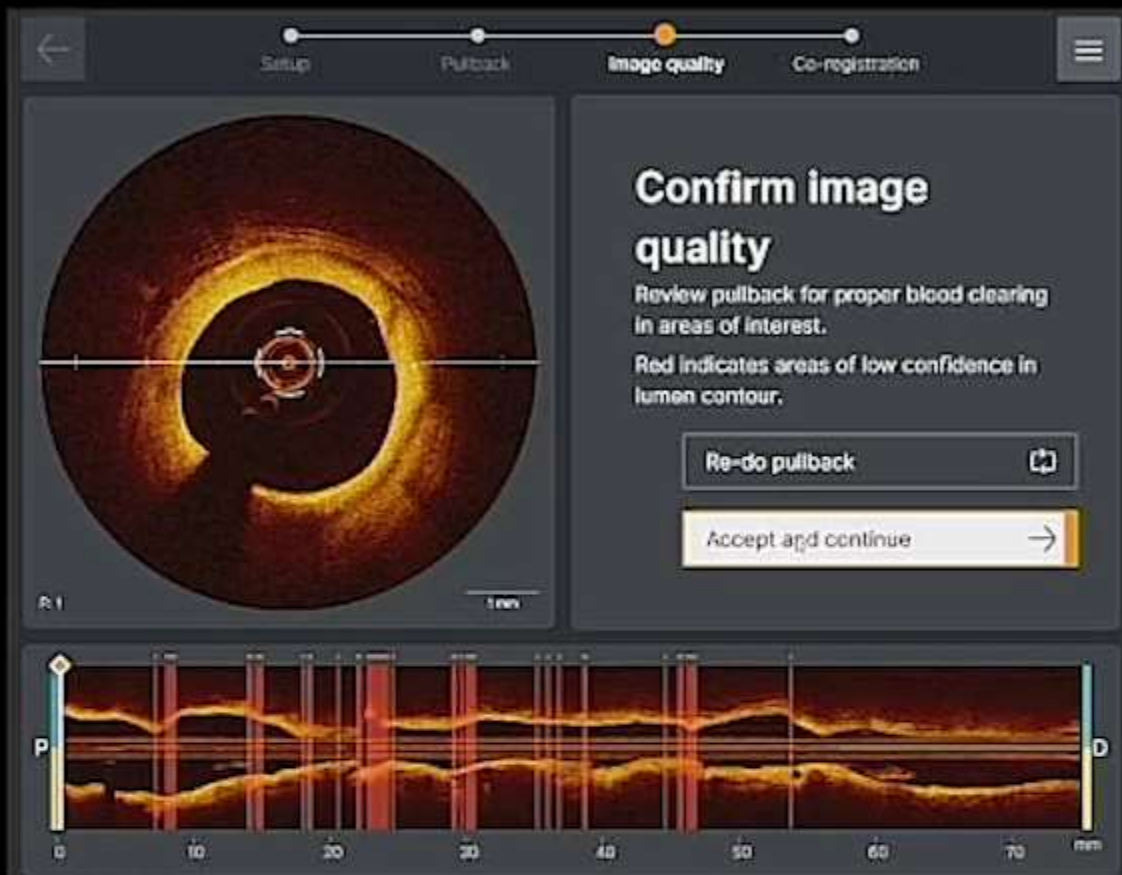

Purge imaging catheter side arm with contrast

Remove catheter cap, insert into DOC and rotate 1/4 turn to engage

OCT guided dilatation

Progress

- The patient was discharged 3 days later with no chest pain.

Discussion – OCT

- OCT was used as intravascular imaging for sizing and landing of lesion in this case
- It uses near-infrared light to provide high-definition, cross sectional & 3D images of the artery with high precision allowing to assess lesion characteristics and plaque morphology for coronary artery disease.
- Superior over IVUS in its image clarity, faster pullback, assessment of calcium, and its semi automated interpretation function
- Limitations: blood clearance, thus making it less versatile than IVUS for certain lesion subset

Pre-PCI OCT | Strategize

Morphology

Search for High Calcium¹

Criteria:
>180 degrees, and
>0.5 mm thickness,
and >5 mm in length

Length

Select Landing
Zones Based on
Healthy Tissue/
EEL Visualization²

Place landing
zones in healthy
tissue (i.e. EEL
visualization)
Note: In the
absence of EEL
to represent
healthy tissue find
the largest lumen
to avoid areas of
TCFA or lipid pools
so as to not land your
stent edge in these
high-risk areas³

Diameter

Measure Vessel,
Stent, Balloon
Diameters⁴

Use distal
reference
measurements
to select stent
diameter
Use distal
reference
measurement for
distal balloons or
proximal reference
measurements
for proximal
balloons

Post-PCI OCT | Optimize

Medial Dissection

Address
Significant
Dissection⁵

Criteria:
Dissection
penetrates medial
layer, and is
greater than
1 quadrant arc

Apposition

Address Gross
Malapposition

Criteria:
Malapposition
indicator shows
longer than 3 mm⁴
of significant
(≥0.3 mm from
wall⁶) apposition

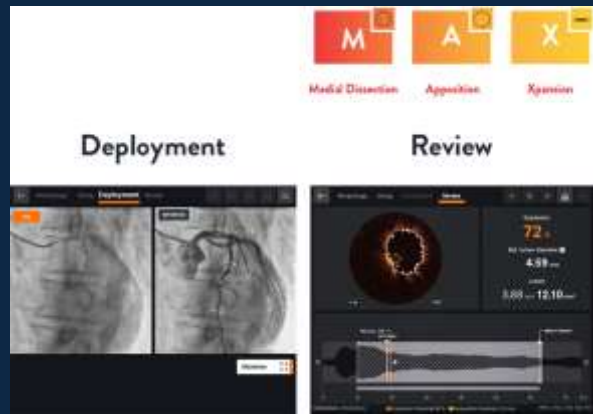

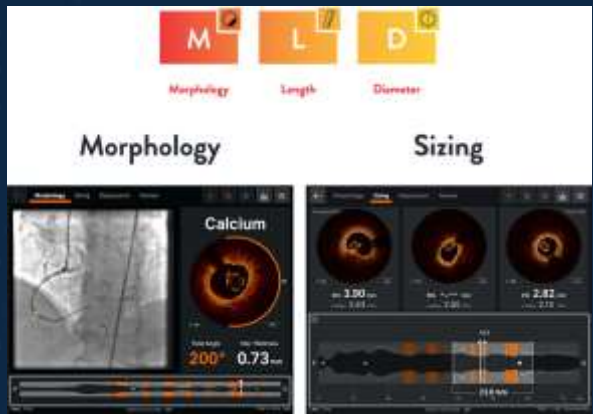

Xpansion

Confirm
Expansion^{4,6}

Criteria:
≥80% acceptable,
≥90% expansion
is optimal

Discussion – Ultreon Software

- Morphology
 - automatically detect degree and thickness of calcification.
- Sizing
 - AI assisted detection of EEL and lumen to identify landing zones
- Deployment
 - side-by-side viewing of live and co-registered angio to help physicians guide precise stent deployment
- Review
 - ensure optimal stent expansion and apposition

Conclusion

- This case may represent one of the day in day out cases commonly encountered in cath lab, but it was the first STEMI case that I was allowed to be the chief operator as a cardiology trainee.
- Live procedure video was recorded with simultaneous fluoroscopic images and pressure tracings.
- This case showed that AI function of OCT can help improve expansion result after stent deployment
