Disclosure Statement of Financial Interest

I, Adnan Kastrati DO NOT have a financial interest/arrangement or affiliation with one or more organizations that could be perceived as a real or apparent conflict of interest in the context of the subject of this presentation.

Multivessel disease in STEMI

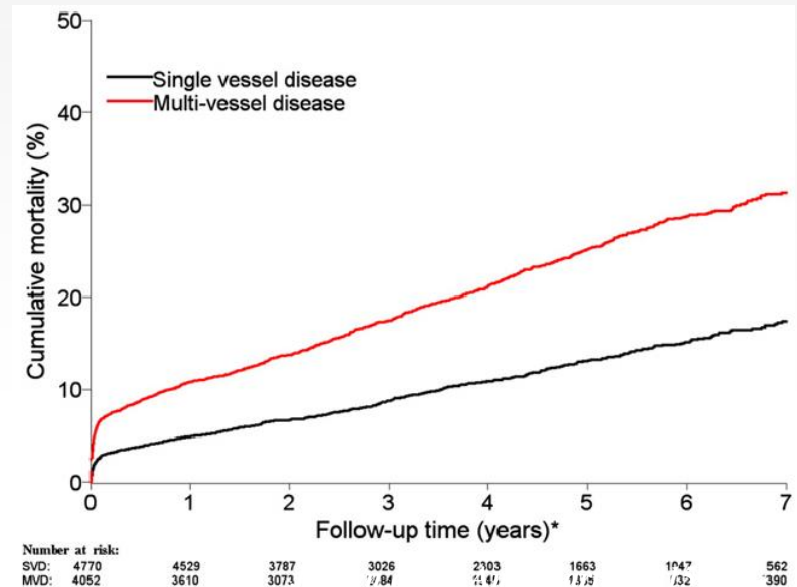

Proportion of diseased vessels in STEMI patients

Long term follow up mortality rate in STEMI patients

Proportion of diseased vessels in STEMI patients

■ Multi vessel disease ■ Single vessel disease

What is new in 2017 Guidelines on STEMI

Complete Revascularization

PRAMI, DANAMI-3-PRIMULTI, CVLPRIT, Compare-Acute

2012

2017

Recommendations	Class	Level
Primary PCI strategy		
PCI should be limited to the culprit vessel with the exception of cardiogenic shock and persistent ischaemia after PCI of culprit lesion.	IIa	B

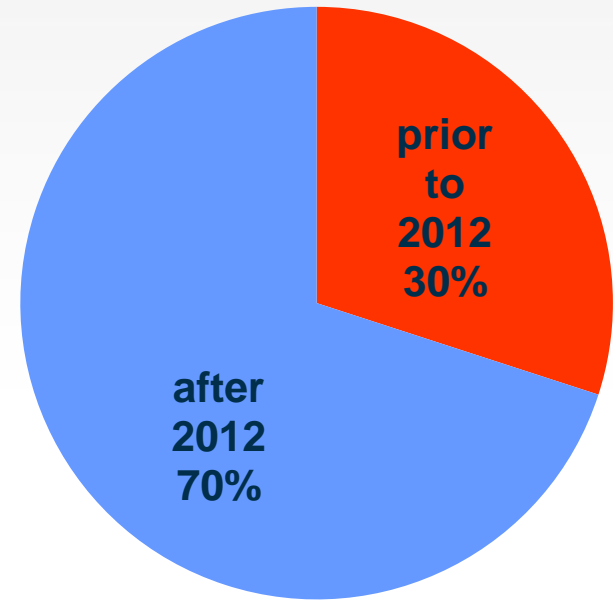

Recommendations	Class	Level
Non-IRA strategy		
Routine revascularization of non-IRA lesions is not recommended in STEMI patients with multivessel disease during primary PCI.	III	B

Recommendations	Class	Level
Non-IRA strategy		
Routine revascularization of non-IRA lesions should be considered in STEMI patients with multivessel disease before hospital discharge.	IIa	A

Available evidence

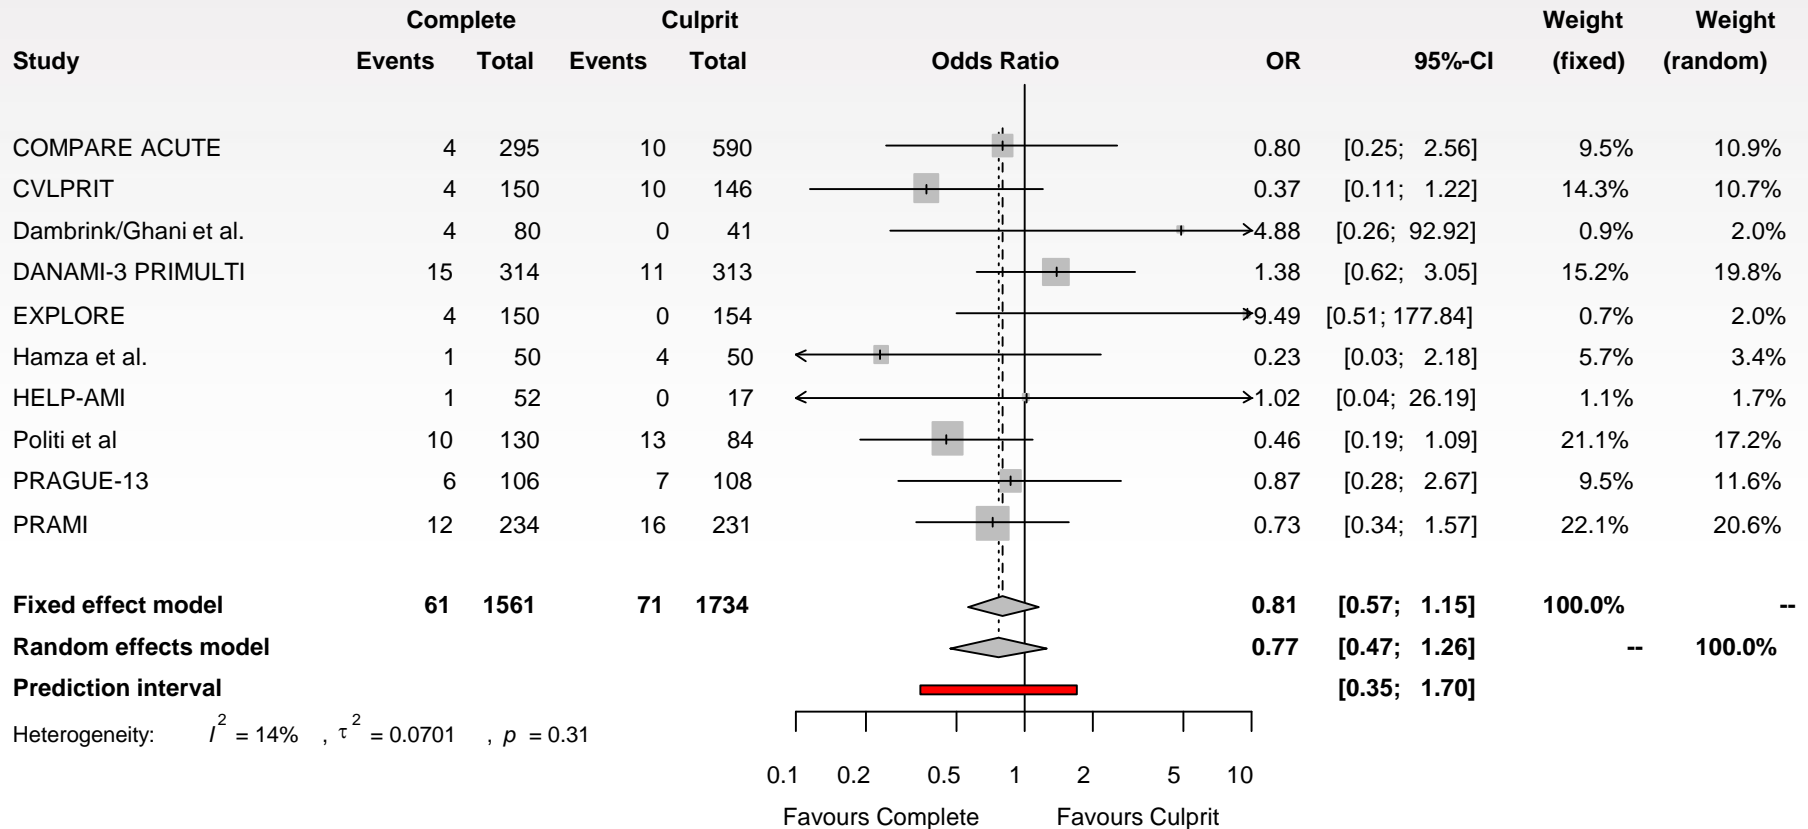

Trial	No of pts	Year of publication
COMPARE ACUTE	885	2017
CVLPRIT	296	2015
Dambrink/Ghani et al.	121	2010
DANAMI-3 PRIMULTI	627	2015
EXPLORE	304	2016
HELP-AMI	69	2004
Politi et al.	214	2010
PRAGUE-13	214	2015
PRAMI	465	2013

10 RCTs, 3295 STEMI patients

After 2012:
7 RCTs, 2891 STEMI patients (88%)

Meta-analysis Mortality

Meta-analysis Recurrent myocardial infarction

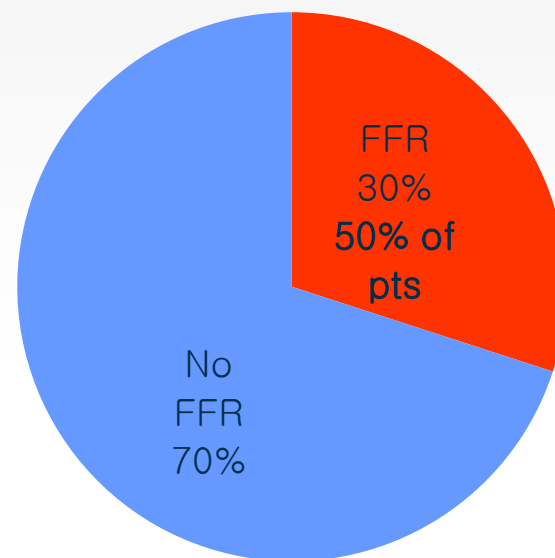

Meta-analysis Need for revascularization

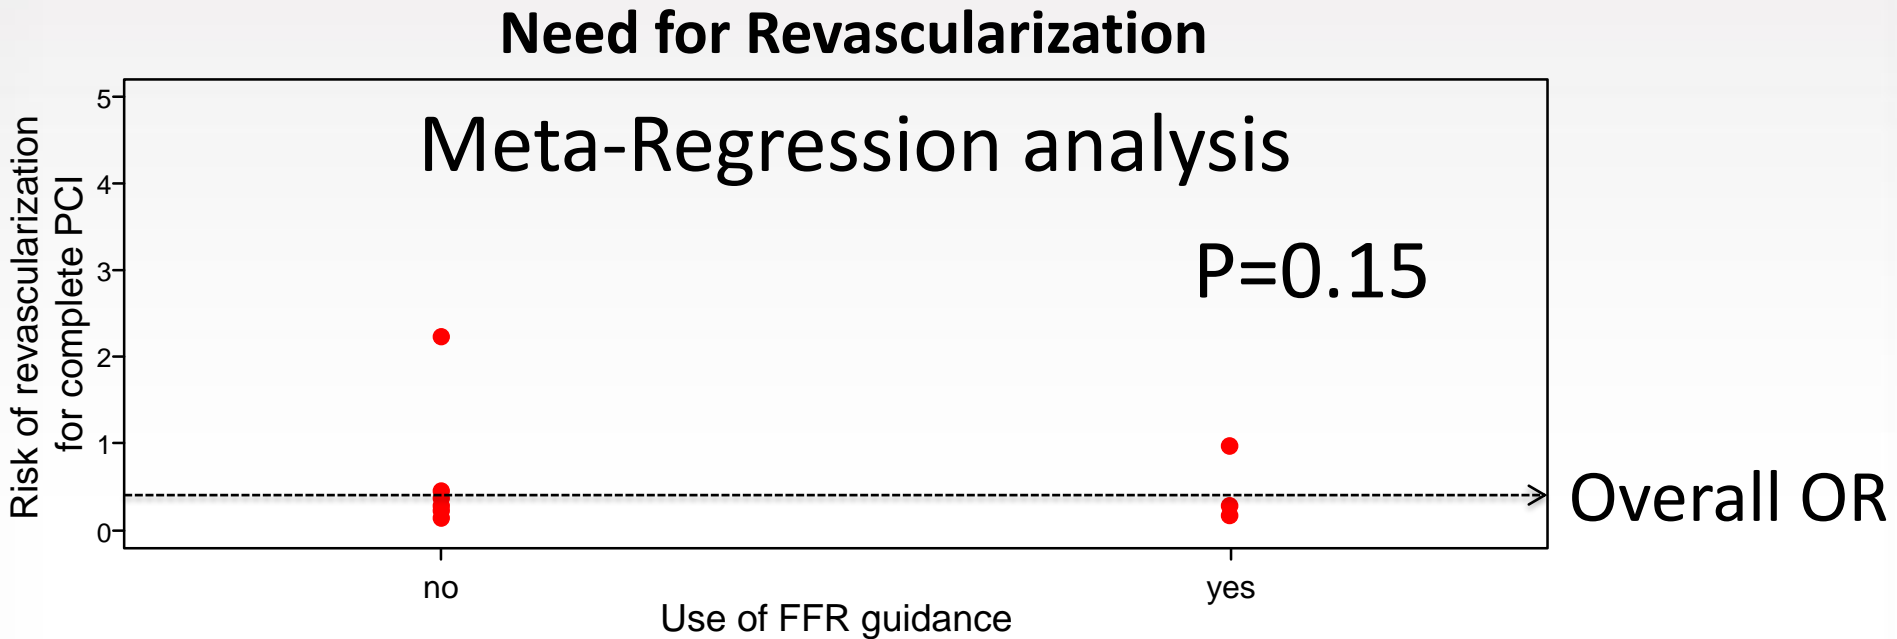

FFR-Guided PCI of non-culprit vessel

Trial	No of pts	FFR Guidance
COMPARE ACUTE	885	Yes
CVLPRIT	296	No
Dambrink/Ghani et al.	121	Yes
DANAMI-3 PRIMULTI	627	Yes
EXPLORE	304	No
Hamza et al.	100	No
HELP-AMI	69	No
Politi et al.	214	No
PRAGUE-13	214	No
PRAMI	465	No

10 RCTs, 3295 STEMI patients

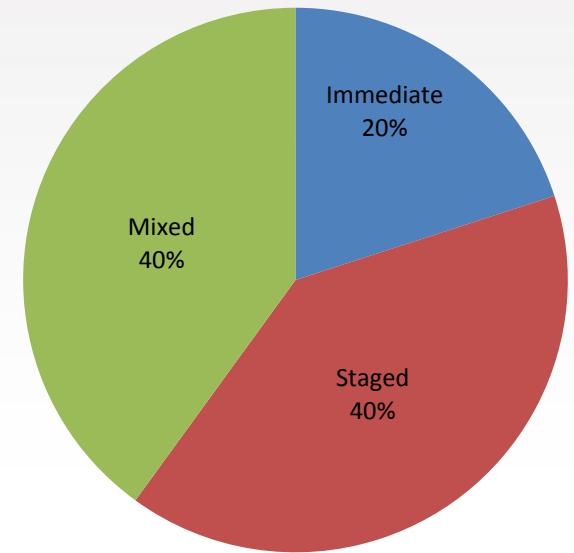

Does use of FFR-guidance enhance the superiority of complete revascularization?

Timing of complete revascularization

Trial	No of pts	Timing of non-culprit PCI	Timing of staged non-culprit PCI
COMPARE ACUTE	885	Immediate or staged	Pre discharge (17%)
CVLPRIT	296	Immediate or staged	Pre discharge (36%)
Dambrink/Ghani et al.	121	Staged	Pre discharge or ≤3wks
DANAMI-3 PRIMULTI	627	Staged	Pre discharge
EXPLORE	304	Staged	≤7 days
Hamza et al.	100	Immediate or staged	Pre discharge (42%)
HELP-AMI	69	Immediate	NA
Politi et al.	214	Immediate or staged	56.8±12.9 days (50%)
PRAGUE-13	214	Staged	3-40 days
PRAMI	465	Immediate	NA

Does timing of complete revascularization affect the benefit of complete revascularization?

Need for Revascularization

Understanding the need of revascularization on top of pPCI of culprit vessel

Complete revascularisation versus treatment of the culprit lesion only in patients with ST-segment elevation myocardial infarction and multivessel disease (DANAMI-3—PRIMULTI): an open-label, randomised controlled trial

Lancet 2015; 386: 665-71

	Infarct-related artery only (n=313)	Complete revascularization (n=314)
Staged non-culprit PCI/CABG @ 3days	11 (4%)	199 (63%)
Primary endpoint*	68 (22%)	40 (13%)
All cause mortality	11 (4%)	15 (5%)
Non-fatal reinfarction	16 (5%)	15 (5%)
Ischemia driven revascularization	52 (17%)	17 (5%)
Revascularizations in addition to pPCI	21%	68%

Understanding the need of revascularization on top of pPCI of culprit vessel

Table 2. Procedural Data.*		COMPARE-ACUTE	
Type of Data	Complete Revascularization (N=295)	Infarct-Artery-Only Treatment (N=590)	
Mean FFR value	0.78±0.12	0.79±0.12	
Patients with treated (FFR-guided) non–infarct-related coronary artery lesions — no./total no. (%)	163/295 (55.3) [†]	NA	
During index PCI procedure	136/163 (83.4)		
Delayed during index hospitalization [‡]	27/163 (16.6)		
Table 3. Prespecified Clinical End Points at 1 Year.			
End Point	Complete Revascularization (N=295)	Infarct-Artery-Only Treatment (N=590)	
Revascularization	18 (6.1)	103 (17.5)	<i>number (percent)</i>
PCI	15 (5.1)	98 (16.6)	
Coronary-artery bypass graft	3 (1.0)	5 (0.8)	
Cerebrovascular event	0	4 (0.7)

COMPARE-ACUTE, NEJM 2017

Understanding the need of revascularization on top of pPCI of culprit vessel

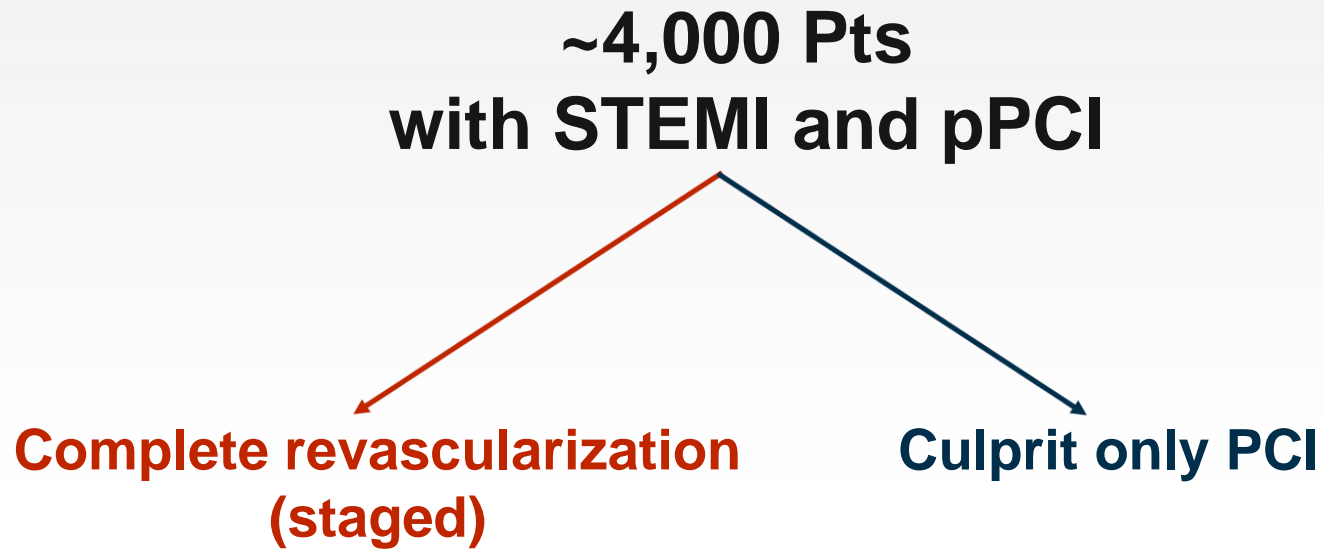

CULPRIT-SHOCK: First big failure of complete revascularization in STEMI

CULPRIT-SHOCK, NEJM 2017

Ongoing trials: COMPLETE trial

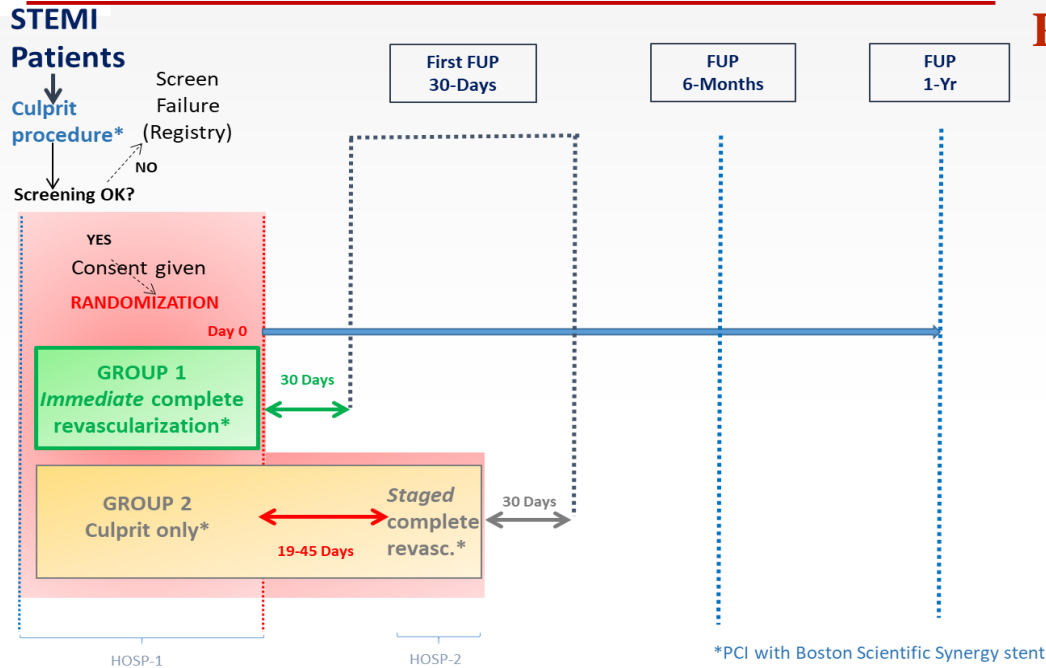

ClinicalTrials.gov Identifier: NCT01740479

MULTivessel Immediate versus STAged Revascularization
in Acute Myocardial Infarction -
The MULTISTARS - AMI Trial

Trial Design

Planned 1,200 pts

Randomization occurs **AFTER** the revascularization of the culprit lesion,
if Inclusion/Exclusion criteria are fulfilled.

ClinicalTrials.gov Identifier: NCT03135275
