# Elution Kinetics for the Drug from the Stent

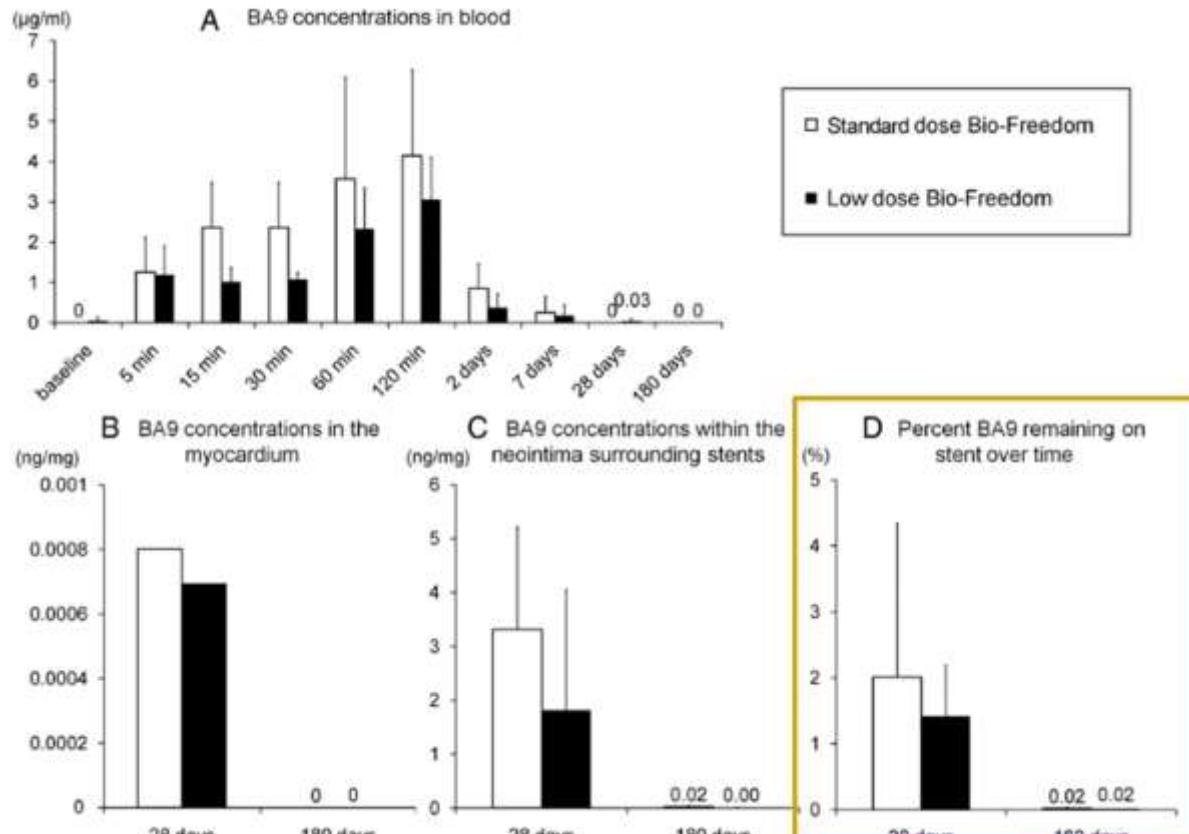

Figure 2. BA9 pharmacokinetics of SD and LD BioFreedom stent. The bars represent means  $\pm$  SD.

- 98% of the drug is eluted from the stent surface at 28 days.
- Comparably rapid initial elution profile
- Prolonged retention of BA-9 in the vessel wall which acts as a secondary reservoir, due to the unique high lipophilicity of the drug BA-9

# Biofreedom : Biolimus A9 Coated Stent

- Biolimus A9 is a safe drug
- No polymer (either degredated or no polymer) is ideal for long-term biocompatibility
- Biofreedom stent can provide
  - Early healing
  - Good neointimal inhibition
  - Long-term safety
